This great and historic change can be synthesized into one point, which is, that we have accomplished the task of setting the party's guiding ideology and practical work in various fields to rights. Through setting things right this time, we have, first of all, eradicated the evil influence of the Lin Biao and Jiang Qing counterrevolutionary cliques, corrected the "leftist" mistakes made before and during the "Great Cultural Revolution," including the mistakes made by Comrade Mao Zedong in his later years, corrected the erroneous "two-whatevers" policy pursued during the 2 years after the smashing of the "gang of four" and criticized the tendency toward bourgeois liberalism over the last few years. We have thus enabled the party's ideological, political and organizational lines and various tasks to embark on the correct course of Marxism-Leninism-Mao Zedong Thought. Nevertheless, it is a scientific summary of the 30 years of both positive and negative historical experiences of the party, a more profound understanding of the laws governing socialist construction and a further integration of the universal truth of Marxism-Leninism with the practice of the ongoing revolution and construction, rather than a simple restoration. While studying new things and seeking solutions to new problems, that is, in the practice under socialism, we have issued a series of correct theoretical and political principles and formulated a series of correct principles and policies, thus enriching and developing Mao Zedong Thought. Facts have proved that the party's line, principles and policies worked out since the 3d Plenary Session of the 11th CPC Central Committee are entirely correct and in conformity with the fundamental interests of the people and the laws governing the development of our socialist society. They have played a tremendous guiding role in the development of our socialist cause, in the practice of the communist movement at the present stage and in the completion of this great and historic change.

In approaching our victories and analyzing the situation, there is the question of method. Some people have an insufficient understanding of the great victory of the historic change and even take a skeptical attitude toward the exceptionally good situation. One of the important reasons for this is that the way they look at things is not on the right track. This state of affairs calls for solution in the course of our study.

It must be acknowledged that many problems accumulated during the 10 years of domestic turmoil and they cannot possibly be solved once and for all within a short time. There are still shortcomings and difficulties in our work. However, compared with the great successes we have achieved, they are after all secondary, partial and temporary. Marxism tells us that in approaching things, we should see their main aspects and the overall situation, and look at a thing with an eye to its course of development to avoid the subjective one-sidedness of not seeing the woods for the trees, or of a leaf obstructing the view of Mount Taishan. Take the living standards of the people for example. Some increases in commodity prices have indeed interfered with improvements in the people's livelihood, but so long as we settle detailed accounts in an overall manner, we will see that remarkable improvements in the living standards of the people have indeed been achieved. Although there still exist unhealthy tendencies of all kinds in the party style, taken as a whole, all these are not the essential and principal aspects. Moreover, we are already most firmly determined and are taking strong measures to solve these problems. We have struck resolute blows at the serious criminal activities in economic and other fields. This is an eloquent proof. Of course, we must not rest on our laurels, and even less must we make an attempt to conceal our shortcomings and problems. However, we must not doubt that there is an exceptionally good situation in the face of the shortcomings and problems and never let them interfere with our confidence in forging ahead.

While studying the second main point, namely, the basic experiences in effecting the great and historic change, we must not only have a serious comprehension and acquire a better understanding of these experiences, but we must also emphatically ponder how to apply these experiences to our work and actions in the light of actual conditions.

The basic experiences gained by the CPC Central Committee in leading the whole party and the people of all nationalities throughout the nation in effecting the great and historic change in the last 6 years are: 1) To be bold in making self-criticism and correcting mistakes in the spirit of seeking truth from facts; 2) to wage timely and appropriate struggles on two fronts--against both the "leftist" and rightist deviations; 3) to adopt the scientific work method of first tackling the key problem so as to facilitate the solution of the rest; and 4) to trust the people and rely on them, and act in compliance with the requirements of the people and historical trends. These four experiences are the concrete application of the basic principles of Marxism-Leninism-Mao Zedong Thought in new historical conditions.

It is a manifestation of thoroughgoing materialism to be bold in making self-criticism. Marx said that one different aspect between proletarian revolution and other revolutions is that the proletariat criticizes itself and expands itself by depending on criticizing itself. Lenin said: "The attitude a party takes toward its mistakes is the most important and reliable yardstick for measuring whether or not this party is serious and whether or not it genuinely makes great efforts to carry out its commitments to its own class and to the masses of the working people." ("Selected Works of Lenin," Vol 4, p 213) Criticism and self-criticism are the fine tradition of our party, but because of personality cult prevailing for years in the past, the party democratic life was damaged and as a result, our party lost, to a certain extent, its courage to make self-criticism and timely correction of its mistakes. Lin Biao and the "gang of four" even went so far as to push this abnormal state of affairs to extremes. It is because we have restored the fine tradition of the thoroughgoing materialist principle of seeking truth from facts and of being bold in making self-criticism, since the 3d Plenary Session of the 11th CPC Central Committee, that we can bring order out of chaos, correct the "leftist" mistakes which have for long years held a leading position, correctly appraise the merits and demerits, the rights and wrongs of Comrade Mao Zedong and scientifically sum up the historical experience since the founding of the PRC.

Waging timely and appropriate ideological struggles on two fronts--against both the "leftist" and "rightist" deviations and avoiding focusing on criticism of one erroneous tendency to the neglect of another are the objective requirements of the course of revolutionary struggles and the concrete application of materialist dialectics in the practice of revolution. Our party has paid a high price many times and has learned grievious lessons in this respect. Although it has also gained successful experiences, the problems in this respect have not been all along solved satisfactorily. After the founding of the PRC and beginning from the end of the 1950's, with the development of "leftist" guiding ideology, there emerged in our party erroneous tendencies of "leaning to the 'left' is preferable to leaning to the right" and "inclining to the 'left' and not to the right." For a considerable period of time, we have acted contrary to the basic principle that we should wage a struggle on two fronts. People were allowed only to oppose the rightist deviation and forbidden to oppose "leftism" and all this resulted in the serious consequence of the "leftist" things growing in number and the "leftist" mistakes becoming harder and harder to correct. This problem remained unsolved for a period of time after the smashing of the "gang of four." The tremendous service of the 3d Plenary Session of the 11th CPC Central Committee was that we set right the guiding ideology of the party and began to correct the "leftist" mistakes made before and during the "Great Cultural Revolution" in a comprehensive and earnest way. Since the 3d Plenary Session of the 11th CPC Central Committee, our party has adhered to the principle of waging a struggle on two fronts and in handling various practical problems, it has done its best to establish the scientific and comprehensive way required by Marxism. In the course of making a clean sweep of the "leftist" mistakes and, when they emerged, the tendencies toward bourgeois liberalism in society, our party conducted criticisms and struggles in good time and reiterated the four basic principles. On various fronts and in every type of work, our party implemented the spirit of opposing "leftism" if there are any "leftist" things and opposing rightism if the rightist deviation emerges. This is indeed the key for us to correctly handle various social contradictions.

The method of tackling the key problem first to facilitate the solution of the rest is also the concrete application of materialist dialectics in practical work. Lenin said: "It is far from sufficient to be only an ordinary revolutionary and a supporter of socialism or a communist. It is necessary to be good at seeking a specific link in a chain at every opportunity and it is necessary to spare no efforts to grasp this link in order to have a firm hold of the whole chain and make steady preparations for the transition to the next link." ("Selected Works of Lenin," Vol 3, p 526) Comrade Mao Zedong also often taught us to be good at first grasping the principal contradiction to facilitate the solution of the other contradictions. Since the 3d Plenary Session of the 11th CPC Central Committee, the reason why our party, in a situation in which the contradictions are complicated and the problems are in heaps, can continually open up new prospects in its work, is inseparable from its adherence to using this scientific work method.

Trusting the people and relying on them is a historical materialist basic principle widely known to all. In the protracted practical revolutionary practice, our party has all along upheld this basic principle and listened attentively to the voice of the people, reflected their demands and adhered to the mass line of everything for the masses, reliance on the masses in everything and from the masses to the masses. However, after we had seized political power throughout the country, arrogance, bureaucracy and commandism emerged among a section of cadres to a certain extent with their sense of the masses getting blunted, their ties with the masses being not so close. They turned a deaf ear to the voice of the masses. This is an important reason why we failed to do our work well in many fields and why we failed to correct our mistakes for years. The factors for the fact that our party has won victory since the 3d Plenary Session of the 11th CPC Central Committee are many, but in the final analysis, it is because the party's line, principles and policies are indeed in compliance with the inspirations of the people and in conformity with the trends of historical development.

These basic experiences summed up by the report are most valuable and they were gained only after the party paid a high price for them. We must cherish them the most. In the course of our study, we must not only master the spirit and essence of these experiences in terms of the integration of theory and practice, but what is more important, we must also really apply these experiences to our work and actions. These experiences seem to be quite familiar and not hard to understand, but it is not very easy to genuinely put them into practice. Take the matter of being bold in making criticism and self-criticism and correcting mistakes, for example. Some comrades have various kinds of ideological obstacles in this respect. At present, the phenomena of not daring to make criticism and self-criticism, of not daring to conduct education and enforce discipline and in particular, the phenomenon in which comrades who have been proved in practice to make mistakes have not yet made any self-criticism, are considerably serious among quite a few comrades. Similarly, some comrades are very often insufficiently firm in opposing both "leftist" and rightist deviations. For example, in a period of time after the smashing of the "gang of four," they were afraid of correcting "leftism" and later when bourgeois liberalism emerged, they were afraid of correcting rightist deviation. All these comrades should enhance self-consciousness in applying these experiences in the light of their ideological reality in the course of study.

While studying the third main point, namely, the understanding of the far-reaching significance of this great and historic change, it is advisable to have a better understanding in two aspects. One is the question of what enlightenment the previous instances of historic change in the history of our party gave us. The other is to understand the important position of the 12th CPC Congress in the history of our party through contrasting what happened in history with what is going on today.

There are two previous instances of historic change that took place in our party during China's democratic revolution, namely, the change from the failure of the Northern Expedition to the outbreak of the agrarian revolutionary war and the change from the failure of the struggle against the KMT's fifth "encirclement and suppression" campaign to the launching of the war of resistance against Japan. These two instances of historic change show a truth: The revolutionary struggles of the proletariat have never developed in a straight course and followed a straight line, and they will unavoidably suffer setbacks and even failures. However, so long as we conscientiously sum up experience and correct the line, principles and policies, we will be able to open up a new path for advance, turn setbacks into smoothness and advance from defeats toward victory. The people often say that failure is the mother of success. Of course, with regard to the reactionary classes, because they act contrary to the laws of historical development, their failures can be nothing but failures and definitely not the "mother of success." The revolutionary cause of the proletariat is a just cause and in conformity with historical trends, so for the proletariat, setbacks and failures are always temporary while advances and victories are inevitable. With this understanding, even in a desperate situation which is "as if the hovering dark clouds want to flatten the city," we can still remain calm and at ease and full of confidence and we can continue to struggle, rather than becoming passive and wavering and growing pessimistic and disheartened. Compared with the two instances of historic change, this change has taken place under vastly different historical conditions. Although we are still confronted with a great deal of difficulties and problems, we must however realize that our party has become more mature and experienced with greater strength. Under these circumstances, we must be more confident that our party can lead the people in overcoming the various kinds of difficulties lying on the road for advance and creating a new situation in socialist modernization.

The 12th CPC Congress was convened at a time when the party had brought about another great and historic change. This congress was similar to the Seventh CPC Congress in systematically summing up experiences and lessons and defining the correct path for continuing to advance through historical twists and turns. Before the Seventh CPC Congress, our party had carried out more than two decades of democratic revolutionary struggles. The stipulations of the Sixth CPC Congress, in 1928, concerning the nature and tasks of the democratic revolution were basically correct, but they failed to become a unified understanding in the whole party and to be objectivized in various kinds of work. Therefore, after the Sixth CPC Congress there emerged the adventurist "leftist" mistakes and then Wang Ming's adventurist line which ruled the party for 4 years, thus bringing grievous losses to the revolution. Later on, it was only through the Zunyi meeting and the Yanan rectification movement and till the Seventh CPC Congress in 1945 that the experiences gained during the period of the new democratic revolution were summed up in an overall manner. The thinking of the whole party was unified and the correct program and tactics were formulated, thus laying a foundation for the national victory of the new democratic revolution. During the period of socialism, from the 8th CPC Congress in 1956 to the 12th party congress, revolution and construction also experienced more than two decades of tortuous development. The line of the Eighth CPC Congress was correct but at that time, because the party lacked mental preparations for striving for all-round socialist construction, it failed to keep the line and many correct ideas drawn up by the eighth party congress going in practice. After the Eighth CPC Congress, we achieved numerous successes in socialist construction but at the same time we also suffered serious reverses, and in particular, we faced the occurrence of the "Great Cultural Revolution"—a decade of domestic turmoil. It was only after the smashing of the "gang of four," and through the party's 3d and 6th plenary sessions and till the 12th party congress that the historical experiences both positive and negative were summed up in an overall manner, the correct line, principles and policies were formulated, and another historic change was effected, thus laying a solid foundation for creating a new situation in socialist modernization. Like the 7th CPC Congress during the period of the democratic revolution, the 12th CPC Congress will be a most important meeting during the period of socialism.

While studying the fourth main point, namely, the party's general task in the new historical period, it is advisable to ponder over two questions: one is to acquire an all-round and comprehensive understanding of the general tasks; and the other is to have a correct understanding of the relationship between the long-range goals of struggle for the two decades up to the end of this century and the goals of struggle within the coming 5 years on the one hand, and the party's general task on the other.

The party's general task in this new historical period is to unite the people of all nationalities in working hard and self-reliantly to achieve, step by step, the modernization of our industry, agriculture, national defense, and science and technology, and to make China a culturally advanced and highly democratic socialist country. The realization of the four modernizations holds a key position in the general task. Only when the four modernizations are accomplished, can we lay a solid material and technical foundation for building a powerful socialist country. However, we must not confine our understanding of the general task exclusively to striving for the four modernizations. We must see that highly advanced civilization and highly developed democracy are similarly the component parts of our general goal of struggle and the important indicators of a powerful socialist country. Furthermore, to realize the above-mentioned goals, the most fundamental thing is to rely on the spirit of the people throughout the country, a spirit of achieving self-reliance through rejuvenation and of working hard. These contents of the general task are closely related and not a single one of them can be dispensed with. While studying it, we must acquire an all-round and comprehensive understanding of the general task.

The party's general task means its general line. Its program and requirements are applicable in the whole historical period of all-round socialist construction, while the program and requirements of creating a new situation in all fields of socialist modernization refer to the total goals which should be attained in two steps from now until the end of this century. This includes a central task, namely, economic construction. The four tasks which need to be carried out in earnest are as follows: Carrying out structural reforms and reforms of the economic system and ensuring that the cadres become more revolutionary, younger, more knowledgeable and specialized; building socialist spiritual civilization, developing socialist democracy and strengthening the socialist legal system; striking blows at all serious criminal activities in the economic and other fields; and rectifying the party's work style and organization. The task of striving to realize a fundamental turn for the better in three spheres within 5 years is surely included in these tasks. In order to fulfill the party's general task in the new historical period, it is first necessary to fulfill the task in the 5 years from the present party congress to the next, strive to bring about a fundamental turn for the better in the country's financial and economic situation, in the standards of social conduct and in the party's work style. Only when these short-term tasks are fulfilled, can we create a new situation in all fields of socialist modernization and similarly only when the long-range goals of struggle from now until the end of this century are attained, can we pave the way for fulfilling the general task. If we are not loyal, enthusiastic and keen in realizing a fundamental turn for the better in the three spheres and fail to fulfill the scheduled requirements, and if we are not loyal, enthusiastic and keen in creating a new situation in socialist construction and fail to fulfill the scheduled requirements, the fulfillment of the general task will come to nothing. Similarly, if we do not have the general task--this grand task--at heart, we will lose our bearings at every stage of development and in the various practical work in the near future and lack motivation. At the closing ceremony of the Seventh CPC Congress, Comrade Mao Zedong called on the whole party to fulfill the tasks of the seventh party congress in the spirit of the foolish old man moving the mountains. While struggling to fulfill the party's general task in the new historical period, we similarly need to learn from this spirit. Now in the face of difficulties, some comrades hesitate to press ahead, and the way of thinking of the coward and the sluggard characterized by attempting nothing and accomplishing nothing prevails among them. This state of affairs is extremely unsuited to the current situation and the party's tasks and thus has to be resolutely sorted out and eliminated in the course of our study.

WITHOUT THE COMMUNIST PARTY THERE WOULD HAVE BEEN NO NEW CHINA

Beijing RED FLAG in Chinese No 18, 16 Sep 82 p 81

[A song (lyrics and music) by Huo Xing [3499 2502]]

[Text] (Moderato, Piu Mosso)

Without the Communist Party there would have been no new China.
Without the Communist Party there would have been no new China.
The Communist Party toils for the nation.
The Communist Party devotes itself wholeheartedly to saving China.
It pointed out to the people the way to liberation.
It led China to the light.
It kept up the war of resistance against Japan for 8-odd years.
It improved the people's livelihood.
It established base areas behind enemy lines.
It practiced democracy, which had many advantages.
Without the Communist Party there would have been no new China.
Without the Communist Party there would have been no new China.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

STRIVE TO BUILD A HIGH LEVEL OF SOCIALIST SPIRITUAL CIVILIZATION

Beijing RED FLAG in Chinese No 19, 1 Oct 82 pp 2-9

[Article by RED FLAG commentator]

[Text] A very important move of the 12th CPC National Congress was that it made the task of building socialist spiritual civilization one of strategic importance, defining the party's fundamental theoretical stand and its principles of action with regard to it.

Since the 3d Plenary Session of the 11th CPC Central Committee decided to shift the whole party's work focus to the modernization of the economy, the CPC Central Committee has, on many occasions, made serious pronouncements in this regard. The most important of these are: First, in the speech [by Ye Jianying] marking the 30th anniversary of the founding of the People's Republic, approved by the 4th Plenary Session of the 11th CPC Central Committee, it was pointed out: The goals of our socialist modernization drive are not confined to the development of the productive forces. "Along with the reform and improvement of the socialist economic system, we will reform and improve the socialist political system and develop an advanced socialist democracy and a complete socialist legal system. While building an advanced material civilization, we want to raise the educational, scientific, cultural and health levels of the whole nation, foster lofty revolutionary ideals and morals, develop a rich and multifaceted cultural life, and thus build an advanced socialist spiritual civilization." Later, in December 1980, the central working conference discussed this question as an important item on its agenda and pointed out sharply: Without spiritual civilization, communist ideology and communist morality, how can it be possible to build socialism? The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," adopted by the 6th Plenary Session of the 11th CPC Central Committee, in summing up historical experience and lessons, further affirmed the idea that life under socialism must attain a high ethical and cultural level, and summarized the objective of the party's struggle in the new period as one of turning China into a powerful, modern socialist country which is highly democratic and highly cultured. This is to say that our program of socialist modernization as a whole consists of the unity of a high level of socialist material civilization, a high level of socialist spiritual civilization and the unity of socialist economic construction and socialist political, ideological and cultural development.

This overall construction program, adopted since the 3d Plenary Session of the 11th CPC Central Committee, has now been affirmed by the party's national congress and developed systematically in the documents of the 12th party congress.

In dealing with this question, the party Central Committee proceeds not from abstract concepts, but from the new situation and new problems in actual life and from the historical experience of the development of socialism in our country and in other parts of the world. The elaboration on socialist spiritual civilization in the report to the 12th party congress rises from reality and history to the theoretical level and contains deep thoughts with regard to scientific socialist theory. Among them, the comprehensive epitome of the characteristics of socialism, the explanation of the concepts of material civilization and spiritual civilization, the elucidation on the dialectical relationship between material civilization and spiritual civilization and the view of socialist spiritual civilization having communist ideology at its core all represent new ideas. We should conscientiously study and consider these theses and, from a high theoretical and political vantage point, recognize the significance and role of socialist spiritual civilization in our program and strategy for building socialism as a whole, to guide us in both thought and action.

Marxist Explanation of the Concepts of Material Civilization and Spiritual Civilization

The concepts of civilization, material civilization and spiritual civilization, particularly that of civilization, are used extensively in Chinese and foreign documents and in daily life. But, in using these concepts, people often differ greatly in angles and emphases. Therefore, the meaning of these concepts is varied and not unified. In Marxist documents, the concept of civilization is also often used, and its meaning is not quite definite, either. Since practice has made clear that these concepts should be the basic concepts for making a Marxist analysis of social life, the concept of socialist spiritual civilization should become a basic concept of scientific socialist theory. Thus, it is an essential task for us in theoretical research to give these concepts an accurate Marxist explanation. The report to the 12th party congress has provided the foundation for such an explanation.

The report to the 12th party congress explains these concepts from the angle of the practical activities of mankind in transforming the world. This angle is the basic starting point for Marxists to observe and analyze the social life of mankind. The report cites remarks by Marx and Mao Zedong as the basis of its line of reasoning.

Mao Zedong is quoted as saying that the proletariat and other revolutionary people face a twofold task in their struggle for the transformation of the world: to change the objective world and, at the same time, their own subjective world. This is true for the struggle of the proletariat and also for the entire history of mankind. Marx, in analyzing the process of the disintegration of the primitive commune, said that in productive activity, not only the objective conditions are changed, but the producers themselves change. To explain the concept of civilization in this way, we should say that civilization, as the result of the transformation of the world by mankind, came into being together with human society, because the history of mankind began precisely with human efforts to transform the world.

Of course, it is also often said that mankind entered the civilized age at a certain time, and before that mankind was uncivilized. This division, however, is relative. In fact, it is a division between different degrees of development of civilization. Continuing to use the viewpoint of Morgan's book "Ancient Society," Engels defined the period in which man lived primarily by gathering natural products and when manmade articles were used mainly as supplementary tools for the gathering of these natural products as the age of barbarism, the period in which man learned to engage in animal husbandry and agriculture as the uncivilized age, and the period in which man learned to further process the natural products, that is, the period in which industry and arts came into being, as the civilized age. We should understand this in the sense that it is a relative division based on degrees of development of civilization. Subsequently, when higher standards were used to make another relative division, we see that Marx, Engels and Lenin called the capitalist society marked by big industry the civilized society, and the society before it the uncivilized society. At the same time, when they began to expose the system of exploitation, especially the barbaric circumstances concomitant with civilization under the capitalist system, they further pointed out that only under the socialist and communist system, with the elimination of exploitation, will the truly civilized age of mankind begin.

Civilization consists of a material aspect and a spiritual aspect. The transformation of nature results in material civilization, as manifested in improved conditions for material production and in a better material life for the people. In the process of transforming the objective world, people also transform their subjective world, and the production of spiritual values and the spiritual life of society also develop. The latter achievement is what we call the spiritual civilization, as manifested in a higher educational, scientific and cultural level and in higher ideological, political and moral standards.

This explanation in the report shows the vastness of the sphere of spiritual civilization. The so-called transformation of the people's subjective world should not be understood only as the transformation of their ideology, but should also include the development and transformation of the people's knowledge, achievements and cognitive ability and methods, and the development and transformation of the people's sentiment, will and sense of beauty.

Spiritual civilization includes, on the one hand, two major aspects: knowledge and culture, ideology and morality, or many attributes with these two main aspects as their basic contents; and, on the other hand, two spheres, namely, the sphere of the individual and the sphere of society, ranging from the individual's cultural, scientific, political and moral accomplishment, sense of beauty and mental outlook to the production of spiritual values, the spiritual life and customs and practices of society. In a word, it covers the development and transformation of the entire spiritual world of mankind.

While differentiating between material civilization and spiritual civilization, we must note that both are the result of interaction between material and spirit, objectiveness and subjectiveness. Tools used for material production result from the materialization of man's intelligence and science. On the other hand, products of spiritual production require a material outfit. All cultural undertakings--whether they are in the fields of education, science, literature, art, journalism, publications, radio broadcasts, television, public health or athletics and whether they involve libraries, museums or cultural relics--require material conditions and facilities. Thus, material civilization contains a spiritual element, while spiritual civilization has its material aspect.

The transformation of society and the establishment and development of new relations of production and new social and political systems are propelled and brought about by the development of material civilization and spiritual civilization. On the other hand, they also promote the development and determine the nature and orientation of these two kinds of civilization. In the final analysis therefore, the progress of society should be measured by using the development of material civilization and spiritual civilization as a yardstick.

The nature of civilization, both material and spiritual, is determined by the social system and the mode of production. This is an inevitable conclusion from the basic viewpoint of historical materialism. Marx stated repeatedly that the mode of production in material life governs the whole process of social, political and spiritual life. A given mode of material production created, first, a certain type of social structure and second, a certain relationship between man and nature. These two things determine man's state system and the way of his spiritual life, and as such, they also determine the nature of his spiritual production. From this viewpoint, we can see that with the changes in the mode of production in man's material life, civilization has developed from a primitive communal civilization to the slave system, feudalism, capitalism and socialism.

Socialist civilization is a civilization related to and suited to the socialist mode of production. Based on the socialist relations of production, it will inherit and assimilate all valuable material and spiritual fruits of man's civilization, let them be enjoyed by the working people and use them for the purpose of satisfying the needs and raising the level of the people's material as well as spiritual life. On this basis, it will develop and create a new civilization, the highest spiritual civilization and material civilization of mankind.

When we talk about socialist civilization, we proceed from and only from, the fact that the fruits of material civilization are enjoyed by the people under the socialist system, and they serve the people and socialism. We do not mean that the contents of material civilization, themselves, can be classified as being capitalist or socialist. When talking about socialist spiritual civilization, we refer to the nature of the spiritual civilization under the socialist system as a whole. In certain aspects of spiritual civilization, the ideology involved can be described as socialism or capitalism. In other aspects, for example, knowledge of natural science, spiritual civilization is just like material civilization, and it is described as being socialist because it is enjoyed by the people and serves the people and socialism. We do not mean to say that the contents of spiritual civilization themselves can be differentiated into capitalism and socialism. This must be made clear in applying these concepts.

Socialist Spiritual Civilization Is an Important Characteristic of Socialism

In the report [to the 12th CPC National Congress] there is one terse paragraph commenting on the socialist characteristics:

"Socialist spiritual civilization constitutes an important characteristic of the socialist system and a major aspect of its superiority. In the past, when referring to the characteristics of socialism people laid stress on the elimination of the system of exploitation, public ownership of the means of production, distribution according to work, planned and proportionate development of the national economy and political power of the working class and other working people. They also laid stress on another characteristic of socialism, the high development of the productive forces and a labor productivity higher than that under capitalism which were both regarded as a necessity and the end result of socialist development. All this is undoubtedly true, but it does not cover all the characteristics. Socialism must possess one more characteristic, that is, socialist spiritual civilization with communist ideology at its core. Without this, the building of socialism would be out of the question."

This leads to an important theoretical and practical question of how to generalize the characteristics of socialism and whether it is an all-inclusive generalization.

Is the above proposition well-grounded? Yes, it is.

In 1886 some people wanted to compile a literary collection entitled "What Is Socialism?" and asked Engels to contribute a short article. In response to this, Engels wrote: "Our view of the characteristics that distinguish a future noncapitalist society from our present society is a definite conclusion drawn from historical facts and the process of development. Without these facts and experiences, there would be no theoretical and practical value whatsoever. In my book 'Herr Eugen Duehring's Revolution in Science,' I tried to describe and explain the economic aspects of these characteristics. I have not been able to shorten this incomprehensive general description which is irrelevant to social problems, whether they are political or noneconomic in nature."

Engels' description of the characteristics of socialism contained in his book "Anti-Duehring" was reprinted in his pamphlet "Socialism: A Development From Fantasy to Science." This pamphlet, which Marx termed a popular little book on scientific socialism, was confined to the analysis of the economic aspects of the characteristics of socialism and only stressed that the proletariat would gain social rights, turn the means of production into public property to put an end to the separation of the producer and the means of production, and replace the anarchic state in the entire social production with production conducted according to predetermined schedule. This pamphlet did not discuss the other aspects of the characteristics of socialism because of limited space and because it was necessary at that time to first bring out the most important and decisive aspect, namely, the economic aspect. The opponents of Marx and Engels in polemics denied and overlooked the decisive role of the economy, a basic principle. The scientific socialism of Marxism is a definite conclusion derived from the analysis of the objective economic developmental process and distinguishes itself from utopian socialism that is divorced from the objective economic developmental process, and it proceeds purely from an ethical viewpoint. Therefore it was completely right for Engels to do what he did. Meanwhile, he also pointed out that the description of the economic aspect was still not an all-inclusive generalization of the characteristics of socialism.

In his work "Critique of the Gotha Program," Marx discussed the political aspects of the subject by elaborating on the idea that the proletariat should exercise revolutionary dictatorship during the transition from capitalist to socialist society. He also put forward the idea that, in the first phase of communist society, the laborer would draw from the social stock of means of consumption what the same amount of labor would cost. This is what people call the idea of distribution according to work, which is different from the idea of distribution according to need in a higher phase of communist society. Thus, Marx further delineated the economic characteristics of socialism.

Although all these are extremely important theses on the characteristics of socialism, they still cannot comprehensively generalize all such characteristics. However, there was no such need to do so at that time, and Marx did not set himself such a task. This is why Marx and Engels did not expound on the spiritual life of future society.

Of course, principled elucidations in this regard are of profound significance for us to transform all ideas derived from the old relations of production and old social relations and to develop education, science and art to the full, according to socialism. Lenin led the October Revolution to victory and then organized the people to strive to carry out the current task of building socialism. The situation posed revolutionary leaders the question of comprehensively generalizing the characteristics of socialism. In expounding the characteristics of socialism, Lenin particularly stressed the development of the productive forces and higher productivity than that in capitalist society, in addition to repeatedly explaining the above-mentioned points. He put forward the formula that communism meant Soviet state power plus the electrification of the country. He also said:

Communism means productivity created by united, voluntary and conscientious workers with advanced technology that is higher than the productivity in capitalist society. With the greatest proletarian revolutionary courage, Lenin did away with the mechanistic concept that socialist revolution can be carried out only in capitalist countries with the most developed productive forces. At the same time, he who kept a clear head as a Marxist stressed: In a country which has won the victory of the socialist revolution, but whose productive forces are less developed, the greatest efforts must be made to develop productive forces in order to lay a proper material and technical base for socialist society. It is entirely correct and of great significance for Lenin to have emphasized this characteristic of socialism. Of course, socialism does not yet possess this characteristic, but should have it. This characteristic is a prerequisite for the development of socialism and an end result of its development.

However, while stressing Lenin's thoughts in this respect, one must also note that Lenin never regarded the development of productive forces as the only task for building socialism. It was Lenin who repeatedly expounded the great significance of communist education, ethics, discipline and attitude toward work. He said: "It will take many years, even many decades, to establish a new labor discipline, create new forms of social ties between people and initiate new ways and means to draw people to participate in work. This is a most noble work and will produce the most results." He said: "Overcoming one's own conservatism, laxity and petty bourgeois egoism is the beginning of a change more difficult, more important, more profound and more decisive than overthrowing the bourgeoisie. The fundamental task of the Communist Party is to help train and educate the working masses so that they can overcome the old habits and practices left over from the old system--the habits and practices of private owners which are deep-rooted among the masses."

It was Lenin who suggested that, after the socialist political and social changes, it was necessary to carry out cultural changes and cultural revolution, that is, to achieve a higher level of universal education and develop material production, for only in this way would a country become completely socialist. He pointed out that it is necessary to acquire all sciences, technologies, knowledge and arts and use them to build socialism. Thus it was Lenin who set out the tasks in many areas of what we now call building socialist spiritual civilization, although he had not yet formed such a concentrated concept.

In light of the tradition of the Chinese revolution in winning victories through protracted, arduous struggles by relying on the guidance of the correct ideology, the political consciousness and dedication of the cadres and masses, and the rich experience unique to our party and army in ideological and political construction, Mao Zedong laid great stress on the important role of strengthening ideological and political work and developing the revolutionary spirit in building socialism. He also put forward many correct and profound ideas in this respect. For example: "Political work is the life-blood of all economic work." "Ideological and political work is the guarantee for the completion of economic and technical work."

"We should maintain the same vigor, the same revolutionary enthusiasm and the same daring, death-defying spirit we displayed in the years of revolutionary war, and carry on our revolutionary work to the end."

Now our party Central Committee has inherited the correct ideas of Lenin and Mao Zedong in this respect and summed up the lessons from the mistakes we made in this area. In the past, mainly under the "left" errors of widening and absolutizing class struggle, we failed to shift the focus of our work to economic construction and, for a long time, underestimated the importance of education, science and culture. Because of taking class struggle as the key link, our ideological and political work became very narrow in scope, and the method used was very simplistic and crude. In economic construction, we also made the mistake of exaggerating the role of subjective will and revolutionary spirit, violating the objective economic laws and neglecting the masses' material interests. In the past few years, we have resolutely corrected these "left" errors. At the same time, we have studied the new problems confronting us and new experience gained in this area after shifting our work focus to economic construction and put forward the basic task of striving to build a socialist spiritual civilization while building a socialist material one. We have thus established our program for building socialism in an all-round way and our theory summarizing all the characteristics of socialism. This is a new conclusion obtained from the historical facts and course of development of socialism and is undoubtedly of great theoretical value and practical significance.

The Relationship Between Spiritual and Material Civilization in Building Socialism

There is the viewpoint that spiritual civilization is determined by material civilization; that without a high level of material civilization, building a high level of spiritual civilization is out of the question; and that with the development of material civilization, spiritual civilization develops naturally. This viewpoint is incorrect.

Marxism stresses the decisive role of the productive forces in social development, which is a fundamental principle of historical materialism. The decisive role here is in the sense of the final analysis, refers to the entire course of historical development, and should not be oversimplified. In analyzing the interrelation between material and spiritual civilization, we cannot cast aside the social system. As viewed from the entire course of the development of the history of mankind, the progresses of material civilization, spiritual civilization and the social system respectively are in harmony and balanced. However, in each specific historical period and each different country, the development in these three areas is often uneven. Because of the influence of the social system and other factors, and because spiritual civilization encompasses a vast sphere, the state of evenness and unevenness between the levels of development in various different sectors of spiritual civilization and the levels of development of material civilization presents a complex picture.

Under the capitalist system, material civilization is highly developed in some countries, but in others, because of long periods of aggression, oppression and plunder by developed countries, material civilization is extremely backward. In the developed capitalist countries, the development of material civilization and progress in science and technology are not equally enjoyed by all members of society, and are often accompanied by spiritual cruelty, barrenness and degeneration. Aren't these the most obvious ugly phenomena under the capitalist system?

Under the socialist system, we should seek harmonious and mutual-promoting development of material and spiritual civilization. However, unevenness still exists, except that its nature and circumstances are fundamentally different from those under the capitalist system. In the actual course of the world's historical development, the socialist system was not first established in countries with the most developed material civilization. This fact has long since refuted the simplistic understanding of the historical materialist theory on the decisive role of developing, productive forces. Our country has established a socialist system, but our socialist system is still in the initial stages of development and our material civilization is not highly developed. However, our socialist system makes it possible for the fruits of material civilization to be enjoyed by all people and makes the development of material civilization to serve the people and society. This is different from any society ruled by the exploiting classes. The socialist system calls for, and will eventually ensure, the development of material civilization at a fairly quick pace in our country. Through the concerted struggle of our masses of people, we certainly can change our state of underdevelopment caused by deep, historical reasons and build a high level of socialist material civilization. However, the building of a high level of socialist spiritual civilization does not necessarily have to wait until the material civilization is already highly developed, just as socialist revolution did not have to take place first in countries with the most developed productive forces. The report puts it well: "The establishment of the socialist system makes it possible for us to build a high level of socialist spiritual civilization while striving for a high level of material civilization, just as the development of a modern economy to a certain level and the appearance of the most advanced class of our time, the working class, and its vanguard, the Communist Party, make it possible to succeed in socialist revolution."

Among the various aspects of spiritual civilization, the development of undertakings such as education, science and culture requires appropriate material and technical means whose scale, quantity and technological level, to a large extent, depend on the level of development of material civilization. However, the people's ideological and political consciousness and moral standards, mental outlook and spiritual life of the society, in other words, the ideological content of spiritual manifestations and social relations and practices can reach a very high level as a result of the establishment of the socialist system and the consciousness and struggle of the masses of people under the leadership of the Communist Party. This is not only possible, but a matter of course, and has been proven by history. The popularization and development of Marxism and communist ideals in the whole society among the masses of people, the establishment and promotion of socialist relations of unity and mutual assistance among the people, and the formation of new ethical concepts and consciousness in observing discipline and social customs and practices are the most important and realistic manifestations of the superiority of the socialist system. The socialist system and its spiritual civilization provide a strong impetus for the development of material civilization and will ultimately create a material civilization higher than that of capitalism. Then, the superiority of the socialist system will be fully manifested.

In discussing the erroneous view that spiritual civilization develops in the course of the development of material civilization, we must point out that although material civilization is an indispensable foundation for socialist spiritual civilization, it will not develop simply because it has the foundation provided by material civilization. The development of socialist spiritual civilization requires that the broad masses of people, relying on this foundation and under the leadership of the Communist Party, consciously make unremitting and hard efforts. At the same time, the building of material civilization needs the spiritual impetus provided by socialist spiritual civilization to ensure its development along the correct course.

When we say our modernization is socialist modernization, we mean that as a social process, our modernization requires not only the development of material civilization, but also that the socialist system and socialist spiritual civilization ensure the socialist orientation of this development. The building of socialist spiritual civilization is one of the most important guarantees for our adherence to the socialist road and concentration of our efforts on building the four modernizations.

The report says: If the great task of building a socialist spiritual civilization guided by communist ideology is overlooked, people will fall into a one-sided understanding of socialism and direct their attention exclusively to the building of material civilization or even only to the pursuit of material gains. In that case, we will not be able to safeguard the socialist orientation of China's modernization, and our socialist society will lose its ideals and objectives, its spiritual motivation and fighting will, lose the ability to resist the inroad of corrupt influences and even develop distortedly and degenerate.

This is an important exposition which merits our deep thought. Only when we understand the dialectical relationship between material and spiritual civilization can we regard the building of spiritual civilization as a strategic goal which concerns all aspects of socialist construction, can we understand that the building of spiritual civilization is an important question having a vital bearing on the success or failure of socialism, can we regard the struggle for building a high level of socialist spiritual civilization as a task for the whole party, a common task for all fronts and an honorable task every cadre and citizen is obliged to take part in. Every builder of spiritual civilization should realize his solemn obligation. His entire work should serve, but not deviate from and much less undermine socialist and communist education among the people. He should also work to help and promote the building of material civilization. Every builder of material civilization should realize that he, too, shoulders the task of building spiritual civilization. He should not only produce more and better material products but also train one generation after another generation of new socialist people for the purpose of material production. He should by no means obstruct or undermine the building of socialist spiritual civilization under the pretext of carrying out economic policies, measures and work. Moreover, he should pay attention to and support the development of cultural construction in various fields. In this way, socialist spiritual civilization becomes a great motive force for building material civilization and the building of material civilization gradually satisfies the material and cultural needs of the whole people and ensures free, all-round and full development of the people's spiritual life. Thus, in the building of spiritual and material civilization, each is the condition and objective of the other.

The Relationship Between the Cultural and Ideological Building in the Building of Socialist Spiritual Civilization

Comrade Hu Yaobang pointed out in his report: "The cultural and ideological aspects in socialist spiritual civilization permeate and promote each other." In both theory and practice, we must stress the unity of these two aspects and must not use one aspect to negate or belittle the other. Cultural development, which is very important, becomes even more important when our task is shifted from revolution to construction. The historic resolution adopted by the 6th Plenary Session of the 11th CPC Central Committee called on us to resolutely liquidate the erroneous views, such as underestimating the importance of education, science and culture and discriminating against intellectuals, which existed over a long period and reached a climax during the "Cultural Revolution." The report again pointed out: "In the past, owing to the influence of 'left' ideas and the small-producer mentality, such erroneous views were rife in our party over a considerable time. They seriously hindered the building of material and spiritual civilization in our country." For this reason, raising the understanding and strengthening the work of cultural development is especially urgent at present.

The report, delivered at the 12th CPC National Congress, regards the development of education and science as one of the three strategic priorities in China's economic growth, expresses the determination to gradually close the gap between cultural and economic development, and reiterates the decision that universal primary education must be achieved in the main by 1990 throughout the country, a task which should have been fulfilled long ago. The report also urges that development plans and goals for other cultural undertakings covering the next 5 to 10 years should also be worked out. These are the important tasks in building socialist spiritual civilization.

At present, the party is calling on the ranks of the cadres to become more revolutionary, better educated and more professionally competent and the people of the whole country to become idealistic, moral, cultured and with sense of discipline, thus stressing the unity between ideological consciousness and knowledge of culture. The raising of people's cultural and scientific knowledge is related to the raising of their ideological consciousness in view of the fact that mastering the Marxist world outlook and scientific theory will enable people to form their consciousness, ideals and convictions on a scientific basis and especially in view of the fact that mastering the professional knowledge required for socialist construction will enable people to put their ideological consciousness into practice in that construction.

There were a number of revolutionary martyrs whose level of education was not so high, but their revolutionary consciousness and sacrificial spirit will forever be our model and guide us in advancing. Of course, from now on, we cannot say for sure that people with a high level of education must also have a high level of ideological consciousness. If those martyrs were still living today, they would certainly respond to the call of the times and the party and strive to raise their cultural level and would never be complacent with, or proud of, their culture.

The socialist character of our spiritual civilization is determined by ideological education, which is the soul of cultural development. The development of all cultural undertakings must be guided by the Marxist world outlook and communist ideology. In view of some specific historical conditions, it is currently especially urgent to stress the importance of ideological education in building socialist spiritual civilization. Looking back in our history in the years of the revolutionary war and under the difficult material conditions, we formed a high level of revolutionary consciousness, ideals, morality and a new type of human relations among our revolutionary ranks and in our revolutionary bases, which attracted the people of the whole country, especially young people, and constituted an important guarantee for the victory of the revolution nationally. After the nationwide liberation in the pioneering stage of our socialist construction, the high degree of enthusiasm among the people of our country in studying Marxism and politics, and the spirit of serving the people wholeheartedly, cleaned up the filth left by the old society, formed a brand-new social practice and value, and gave strong impetus to our socialist cause, thereby demonstrating the great superiority of the socialist system in spiritual civilization and winning the respect of revolutionary people all over the world.

The mistakes and turmoil of the "Great Cultural Revolution" confused the people's sense of right and wrong, good and evil, and beauty and ugliness. They delayed and destroyed the building of material as well as spiritual civilization and dampened the people's conviction in Marxist ideology and the communist ideal, thereby giving rise to the corruptive ideas of bourgeois ultraindividualism and anarchism. The consequence has been extremely grave.

Since the downfall of the "gang of four," especially since the 3d Plenary Session of the 11th CPC Central Committee, we have brought order out of chaos, restored the true features of Marxism and socialism and liquidated the pernicious ideological influence of Lin Biao and the "gang of four." The situation is rapidly developing toward a healthy direction. But, eliminating the grave mental consequences that resulted from the "Great Cultural Revolution" is difficult and requires efforts for a long time to come.

Meanwhile, new problems have cropped up under the new situation. In the past few years, we have stressed shifting the emphasis on work, improved the people's livelihood, implemented the principle of distribution according to work, adopted the policy of opening to the outside world and of revitalizing the economy at home, and encouraged some people to get rich first. All this is correct and necessary and has gained marked results as well as the people's support. But, because of continuing class struggle within certain limits, because of the impact of the habits of the old-time private property owners and the impact of foreign capitalist ideas and because ideological and political work as well as management work cannot keep up with the demands of the changing period, some people now look forward to nothing but money and publicly claim that men die for wealth and birds die for food. All kinds of illegitimate and evil practices have come into existence. Even deplorable social practices, which had disappeared long ago in new China, once again prevail.

We must uphold the party's correct economic policies and encourage the masses' enthusiasm for developing production and for achieving prosperity through hard work. At the same time, we must be wary of the backlash of corruptive and depraved practices in our spiritual life. Through the party's repeated emphasis and the experience of actual life, the whole party and people can now better understand the importance and intensity of this issue. Much has been done and initial results have been achieved on all fronts in promoting socialist spiritual civilization, encouraging healthy trends and striking at evil practices.

The report called for a radical change for the better in the standards of social conduct and party work style in the next 5 years. It also pointed out that the party's ideological construction is the pillar that supports the whole society in building spiritual civilization. Efforts to popularize education of ideals, morality and discipline among the people throughout China, especially among the young people, are fundamental for a radical change for the better in the standards of social conduct.

We must proceed from within the party and conduct these educational programs successfully. As required by the report, we should arouse, with revolutionary ideas and spirit, the immense enthusiasm of the broad masses for building socialism so that our socialist cause will forever maintain its revolutionary vigor.

BUILD A GOOD CADRE CONTINGENT ACCORDING TO THE PRINCIPLE THAT THEY MUST BE MORE REVOLUTIONARY, YOUNGER IN AVERAGE AGE, MORE EDUCATED AND PROFESSIONALLY MORE COMPETENT

Beijing RED FLAG in Chinese No 19, 1 Oct 82 pp 10-14

[Article by Song Renqiong [1345 0117 4522]]

[Text] The new party constitution adopted by the CPC National Congress has stipulated in clear and definite terms that "The party selects its cadres according to the principle that they should possess both political integrity and professional competence, persists in the practice of appointing people on their merits and opposes favoritism; it calls for genuine efforts to make the ranks of cadres more revolutionary, younger in average age and more knowledgeable and specialized." The core of the organizational work is the question of cadres. Making the ranks of the cadres more revolutionary, younger in age and more knowledgeable and specialized is a major principle of the party's cadre work in the new period. The comrades of the whole party must resolutely, unconditionally and enthusiastically propagate and conscientiously implement this principle.

The advance and formation of this principle went through a process. After the 3d Plenary Session of the 11th CPC Central Committee formulated the party's ideological and political lines in the new period, in July and August 1979, Comrade Deng Xiaoping inspected Shandong Province, Shanghai and Tianjin. On his inspection tour, he pointed out on many occasions during the journey that since the ideological and political lines have been formulated, the question now is that of the organizational line, that of cadres and in particular, that of selecting successors. Cadres who are competent and fairly young should be selected for promotion. On 29 September in the same year, in his speech delivered at the meeting to celebrate the 30th anniversary of the founding of the PRC, Comrade Ye Jianying stressed the need to pay attention to ensuring that "the ranks of cadres become younger in average age and more specialized step by step" and the need to try our best to "make the situation of our organization suit the political task of realizing the four modernizations." In May 1980, at the forum on the work of selecting and promoting outstanding young and middle-aged cadres, a forum which was convened by the Organization Department of the CPC Central Committee, Comrade Yaobang further pointed out that the so-called ideal leading bodies means that the members of the leading bodies must resolutely carry out the party's line, uphold the socialist road, possess professional knowledge and organizational and leadership ability, and must be in the prime of life and full of vigor. During this period, Comrade Chen Yun held that in selecting cadres, attention should be paid to the fact that they should possess both political integrity and professional competence. By political integrity, we mean, above all, upholding the socialist road and the leadership of the party. On this basis, the cadres should become younger in average age and more knowledgeable and specialized, and furthermore this method of selecting and using cadres should become a regular practice. The great historically significant decision adopted by the 6th Plenary Session of the 11th CPC Central Committee again clearly affirmed that "the party has decided to put an end to the virtually lifelong tenure of leading cadres, change the overconcentration of power and, on the basis of becoming more revolutionary, gradually reduce the average age of the leading cadres at all levels and raise their level of education and professional competence." From the above-mentioned sketchy review of the past, we can see that the policy of ensuring that the ranks of cadres become "more revolutionary, younger in average age and more knowledgeable and specialized" was worked out by the party Central Committee through careful consideration and on the basis of making repeated deliberations and of drawing on collective wisdom and absorbing all useful ideas. It is the crystallization of the collective wisdom of the party's leading core, it conforms with objective reality and also complies with the common aspirations of the party and the people.

To ensure that the ranks of the cadres become more revolutionary, younger in average age and more knowledgeable and specialized is a major subject put forth by the objective process of the continuous development of our socialist cause. With the 3d Plenary Session of the 11th CPC Central Committee as the milestone, our country has entered a brand-new period of development. During this period, the party should shoulder the heavy responsibilities entrusted by history of leading the people of all nationalities throughout the country in building the economically and culturally backward China into a modern and powerful socialist country. The task of carrying out such an unprecedented pioneering undertaking is extremely arduous. Although the domestic and international situations are favorable for us, we are still confronted with many difficulties. Of the various kinds of difficulties, the conspicuous difficulty is that the present conditions of the ranks of cadres are not suited to the requirements of the new situation. The main manifestations of this situation at present are: 1) historically, the members of leading bodies at various levels are universally 15 to 20 years older than they were before the "Great Cultural Revolution" and the gap between their present average age and that in the 1950's is even wider, that is, the phenomenon of aging is serious; and 2) a considerable number of cadres lack cultural knowledge and scientific and technical know-how, and the number of those who have received systematic professional training and have a knowledge of advanced science and technology and management techniques is even smaller.

This state of affairs is in sharp contradiction with the requirements of the socialist modernization program. If we ignore the question of cadres put forth by the objective process of the great historical turning point and fail to promptly and correctly solve this problem, it will be difficult to implement the party's political line, let alone continuously carry it out for long years. It is not alarmist talk to raise the question in this way. The practice of the international communist movement has given us grievous lessons. The profound lessons our party has drawn from solving the problem of successors and from building a cadre contingent remain fresh in our memory. Happily, we already have a large number of veteran revolutionaries who enjoy high prestige and command universal respect and have rich experience. At a critical moment in effecting a great turning point in history and facing the question of the cooperation between old and new cadres and the succession of the old by the new, with great foresight, they put forth in good time for the party a correct principle of properly solving the question of cadres, that is, a principle of ensuring that the ranks of cadres become younger in average age and more knowledgeable and specialized on the basis of revolutionization. Experience tells us that only a party which is not only good at formulating a correct political line but also good at formulating the organizational line which ensures the implementation--the effective implementation--of the political line, can be regarded as a mature Marxist party. Ours is precisely such a party.

To ensure the "four modernizations" of the ranks of cadres, it is first imperative to start with the "transformation" of the leading bodies at various levels. Our tentative ideas are that before the convening of the next CPC National Congress, 5 years of efforts should be exerted to substantially raise the political quality of the leading bodies at various levels, and reduce the average age of the members of the leading bodies at various levels by about 5 years compared with that before the organizational reform; by then, the young and middle-aged cadres who possess both political integrity and professional competence will constitute about 70 percent; those who have an educational level of institutions of higher education or above and have mastered certain professional knowledge will make up 60 to 70 percent. In particular: we must have some of the number one and number two men of great ability who can unite and lead all the leading bodies in opening up new prospects in work. Of course, since the various localities at all levels, trades and departments have their own specific tasks, the requirements of the political and ideological levels, age and composition of knowledge for the leading bodies must also differ accordingly. However, we must not waver in marching ahead along the lines of making the ranks of cadres more revolutionary, younger in average age and more knowledgeable and specialized, in building working bodies which are small in number but highly energetic and capable of continuously opening up new prospects in work. Can the above-mentioned tentative ideas be realized? The achievements gained in the organizational reform carried out in the organs under the direct jurisdiction of the party Central Committee and the ministries and commissions under the State Council in the first half of this year make us confident in answering in the affirmative. This reform which took us 4 months not only great reduced the authorized size of the party and government bodies at the central level and their staff but also widely reduced the average age of the members of the leading bodies of the ministries and commissions and bureaus under their jurisdiction by 4 to 6 years. According to the statistics of the 38 ministries and commissions under the State Council, the number of ministers, vice ministers and directors was reduced by 67 percent and the newly promoted young and middle-aged cadres constituted 32 percent of the total sum of members of the newly established bodies; moreover their level of knowledge was higher and more and more people were professionally competent. There are also quite a few successful instances in the localities, departments and enterprises and undertaking units where the organizational reform has not yet been carried out. This shows that the above-mentioned requirements are attainable so long as efforts are exerted.

The crux of the matter lies in the fact that the problem of "retirement" and "promotion" should be solved satisfactorily. By "retirement," we mean conscientiously and properly arranging for batches of old and infirm comrades to retire to the second or third line resolutely in accordance with the regulations of the party Central Committee concerning the retirement system for old cadres and the related regulations of the State Council. The practice of the organizational reform of the party and government central organs shows that the overwhelming majority of our veteran cadres have high political consciousness; can recommend wise and well qualified people out of concern for public interests; can proceed from the overall situation to conscientiously submit to the needs of revolution and the arrangements of the party organizations; can support young comrades whose seniority, prestige and experience are inferior to their own in their newly assigned work, and are willing to be assistants or to retire to the second or third line to take on the task of helping and guiding their young comrades and passing on experience to them. By "promotion" we mean promoting young and middle-aged cadres who have proved themselves to the leading bodies resolutely to be really outstanding after undergoing trials in practice, according to the principle of both political integrity and professional competence. As Comrade Chen Yun said: Not just a few dozen or a few hundred, but thousands and tens of thousands of cadres must be promoted. At present particular attention must be paid to training and selecting outstanding cadres who are about 30 to 40 years old. The promotion and retirement of this kind are closely related. For veteran cadres to withdraw from first-line leading posts is important while for young and middle-aged cadres to be promoted to these posts is more important. Careful and skillful handling is needed in solving the questions of who should retire and what should become of them and who should be promoted and to what posts. The most important thing in this regard is to find the right people and put them to good use.

The guiding ideology of the CPC Central Committee is quite clear on the matter of "promotion," that is, it is imperative to boldly promote cadres who possess both political integrity and professional competence, and are in the prime of life and capable of opening up new prospects in work to leading posts; at the same time, none of the "three types of people" and none of the people who have seriously violated the law and discipline in the political or economic sphere in recent years should be allowed to sneak into the newly established leading bodies. It is the solemn responsibility of the party committees at all levels and the departments of organization and of personnel affairs to manage these two matters well, conscientiously implement the party's standards for selecting cadres and persist in the practice of appointing people on their merits and opposing favoritism. At the same time, it is also necessary to earnestly heed the opinions of all sides and quarters concerned and the masses, restructure the practices of the organizational and personnel work which do not suit the modernization program and open up new channels for discovering, training and using qualified personnel. Who are the able and virtuous people whom the party and the people want most to select and put in important positions? The three requirements which the party stressed some years ago and the six basic requirements stipulated by the new party constitution for leading cadres at all levels to meet are identical in spirit. The requirements are the embodiment of the dialectical unity of Red and expert and the objectivization of the party's principle of both political integrity and professional competence in the new historical conditions. While grasping and carrying out these requirements, it is essential to strictly ensure the political standard first and to promote the comrades who really have a strong sense of party spirit, are honest and upright in their methods and dare to uphold principles. It is impossible to imagine that a man who lacks firm confidence in socialism and communism, who is alienated from the correct line, principles and politics of the party Central Committee, who is irresponsible in his work, in low spirits and morally degenerate in his conduct, and who violates the law and discipline can shoulder heavy loads in leading socialist construction. However, it is far from enough to pay attention exclusively to political integrity. Only when they become younger in average age and more knowledgeable and have a good grasp of their professions, can our ranks of cadres adapt themselves to the requirements of the new tasks of the new situation. It is a pity that those who possess political integrity without professional competence can hardly take up an important post although admittedly they are politically trustworthy; the professional competence of those who possess professional competence without political integrity is precisely enough to make them more self-seeking and wily.

If we put them in important positions, they will constitute a grave danger to us. At present, we must specially watch out for the people who rose to prominence by following the Lin Biao and Jiang Qing counterrevolutionary cliques; people who are seriously factionalist in their ideas; people who indulged in beating, smashing and looting; people who are opposed to the line followed by the party Central Committee since the 3d Plenary Session of the 11th CPC Central Committee; and people who have seriously violated the law and discipline in the economic and other spheres, and we must never let them sneak into leading posts. None of these types of people must be promoted and any of them who have already been promoted to leading bodies must be resolutely and thoroughly removed from the leading bodies one by one if discovered. This is an extremely important matter which concerns whether or not we can ensure the smooth sailing of the socialist modernization program and ensure the continuity of the party's Marxist line. We must never treat this matter casually.

To judge and select cadres at various levels, we must strictly act according to the basic requirements stipulated in the new party constitution and on no account must we lower the requirements on them in the slightest degree. Then are there thousands and tens of thousands of such qualified personnel for us to select for promotion? We not only already have such talent but also have rich resources of it. There is no harm here in calculating roughly the age, qualifications and records of service (the tempering they have undergone) and the composition of culture and knowledge of the existing cadres: 1) the comrades who are 36 to 55 years old number 11 million; 2) the number of cadres who took up their work after the victory of the war of resistance against Japan and before the "Great Cultural Revolution" is around 12 million; 3) the comrades who have reached the level of senior middle school graduate or above total roughly 12 million; and 4) the technical cadres of various professions amount to more than 8.3 million. After the founding of the PRC, we trained a total of more than 3.1 million university graduates and over 38 million graduates from senior middle schools and specialized secondary schools, at present the intellectuals who work in the units under the system of ownership by the whole people and under the collective ownership system number more than 25 million. It can thus be seen that it is entirely possible to select those who excel in all spheres and to choose one in a hundred from our huge treasure house of talent and to accelerate the promotion of cadres.

Over the last 2 or 3 years, the party Central Committee and the various localities and departments have done a lot of work in realizing the "four modernizations" of the leading bodies and certain achievements have also been scored in this respect. However, judging the work as a whole, the result is far from satisfactory. This does not mean that we have not yet selected any of the right people but what we mean is that the number of people we have selected for promotion is too meager. This plus the natural growth of the age of cadres has brought about the phenomena in which little change has taken place in the average age of the members of quite a few leading bodies and large batches of comrades who possess both political integrity and professional competence and are in the prime of life have not been promoted to appropriate leading posts. The problems and difficulties in this respect lie in the fact that, as Comrade Deng Xiaoping said: The existing organizational system and the way of thinking of quite a few comrades are detrimental to the selection and use of the talent that is needed most badly in the four modernizations. Where does the way out lie? Comrade Deng Xiaoping said: "We hope that the party committees at all levels will make a big turnaround on this matter, resolutely emancipate their minds, overcome one obstacle after another, break with old conventions and be bold in reforming the system of organization and of personnel affairs which are out of keeping with the times, in vigorously training, discovering and breaking the rules to promote outstanding talent and in waging resolute struggle against all phenomena of suppressing and trampling talent underfoot." In this respect, we, the Organization Department of the CPC Central Committee, did insufficiently in the past.

In the future, together with the comrades of the whole party, we must do our best to act as required by the party Central Committee. First of all, we must further deepen our understanding and in the selection work, we must pay regular attention to opposing feudal ideas, such as the mentality of "replacement according to seniority" and clear away the influence of "leftist" ideology in treating intellectuals, correct the idealist way of thinking of seeking "all-rounders," "perfect men" and the like in a way that deviates from reality, and really shift the emphasis of cadre work to the acceleration of the "four transformations" of the ranks of cadres so as to realize the "four modernizations" of the country.

It must still be pointed out here that making the ranks of cadres more revolutionary, younger in average age and more knowledgeable and specialized is a principle which should be carried out for long years throughout the whole new period. Carrying out the "transformation" in an on-and-off way will never attain the goal of "transformation." This is not only because people are getting older year after year, that is, today they are in the prime of life and some years later they will grow old and infirm, but also because the development of our cause calls for steady improvement of the requirements of being more revolutionary, knowledgeable and specialized. What is more, whether or not the newly promoted people can be well qualified must also go through trials in practice and they are bound to change. Therefore, we must implement the principle of ensuring that the ranks of cadres become more revolutionary, younger in average age and more knowledgeable and specialized and find good solutions to the problem of the cooperation between old and new cadres and of the succession of the old by the new with extremely great revolutionary toughness and with positive, steady and sure steps. People can see that the organizational reform of the central organs and the ministries and commissions of the State Council has pushed the "four transformations" of the leading bodies a big step further. This is however only the first step. According to statistics for the 34 ministries and commissions connected with the economy under the State Council, there are now 137 ministers and vice ministers as well as directors and vice directors with an average age of 57.93 years old, or 5.7 years less than before the organization reform. This is significant progress. However, if we do not continue selecting young and middle-aged cadres for promotion, after 2 years, their average age will again increase to more than 60 years old. It can thus be seen that if we relax our work a bit or do our work in an on-and-off way, it will be difficult for us to fundamentally free ourselves from a passive position. Therefore, it is imperative to reform the cadre system and to guarantee that the work of making the ranks of cadres become more revolutionary, younger in average age and more knowledgeable and specialized is institutionalized.

The shift of the focus of the party's work and the organizational and structural reforms require us to reform the unsuitable aspects of the cadre system. This is a historical necessity. The two go hand in hand. If we shut our eyes to the needs of development of the situation and do not enthusiastically and resolutely reform the aspects of the cadre system in which conditions are ripe and reform them partially, this will greatly delay our work. On the contrary, things will go contrary to our wishes if we regard this reform as a simple thing or take any hasty action. In reforming the present cadre system, it is first necessary to strictly implement the decision of the party Central Committee concerning the retirement of old cadres. The retirement of the old cadres at various levels must be carried out in accordance with the regulations of the party Central Committee concerning the method of reckoning age. Apart from some specific veteran comrades who have passed the age limit for retirement but are required to stay in the leading bodies by the decision of the party organizations concerned, the overwhelming majority of the old cadres must retire on the basis of doing a good job of persuasion and making proper arrangements for them. Good care must be given to the retiring old cadres and attention must be paid to bringing their role into play.

While their health permits, these comrades are encouraged to continue to make contributions to the party and the state within their power. When everybody is gradually accustomed to the implementation of the retirement system of cadres through years of efforts, the normal succession of the old by the new will be ensured institutionally. Of course, this system alone is far from sufficient. We must still establish and perfect the job responsibility system for cadres of various types and at various levels from top to bottom in the light of the organizational reform and the systems of assessment, promotion and demotion, and rewards and penalties for cadres which are suited to the job responsibility system; we must further perfect the systems of democratic election and appointment and removal of cadres in the light of perfecting political life and in accordance with the stipulations of the party and the state constitutions. Reform of the cadre system is a new thing. We will surely encounter many difficulties. However, if we fail to resolutely carry out the reform, we are bound to encounter more and greater difficulties. We hope that everyone will work strenuously in this respect and strive to lay a good foundation for further reforming the cadre system through the organizational reform of the units at various levels.

Finally, I would like to discuss the question of vigorously intensifying the education and training of cadres. The rapidly developing socialist modernization program requires us to continuously train and bring up cadres who are more revolutionary, younger in average age and more knowledgeable and specialized in larger quantities and of better quality and to fundamentally raise the quality of the whole contingent of cadres. This is a matter of strategy which has a bearing on the success or failure of our cause. In order to solve this problem, our country is stepping up its efforts and reforming the school educational work so as to infuse new blood into the ranks of cadres. One important task at present and for a period of time to come is that our work should be based on the universal raising of the standard of existing cadres. Apart from continuing to persist in training and tempering the cadres in practice, it is still necessary to train them on a large scale. Recently, the party Central Committee made a decision of strategic importance on training cadres on the job in rotation and urged the party schools at all levels, cadre schools run by government organizations and enterprises, and especially designated institutions of higher education and the specialized secondary schools to shoulder the regular training of cadres in their different capacities. In the future, in our use and promotion of cadres, we must attach importance to educational background and academic records as well as to experience and achievements in work. Therefore, cadres of various types and at all levels must try their best to acquire a certain level of formal learning and of educational knowledge. All cadres who are working and who do not possess the level of cultural knowledge needed in their work should be trained in rotation by stages.

There must be an assessment examination in the vocational training and academic records will be one of the important bases for making appropriate adjustments of cadres. At present, some localities and departments have not attached due importance to the work of training cadres and there are also some cadres who are unwilling to take part in study. This is wrong and must be rectified. We must launch a sustained upsurge for study among the cadres at various levels throughout the nation for the sake of the grand cause of socialist modernization; an upsurge in which people study Marxism-Leninism-Mao Zedong Thought, acquire general knowledge, master scientific and technical know-how and operational and management techniques and study all that is needed to build a high level of socialist material civilization and spiritual civilization. In the last few years, more than 8,100 party schools and specialized cadre schools at various levels have been restored and newly built and the ranks of cadres teaching in such schools have developed into an approximately 100,000-strong contingent; more than 130 institutions of higher education have run special training courses for cadres; the various localities, departments and some medium and large-sized enterprises have run large numbers of cadre training courses, and the number of cadres who have been trained in rotation and received vocational training has increased year after year. According to statistics, the number of leading cadres at county level throughout the country who were trained in rotation from 1979 to 1981 reached more than 200,000, constituting more than half the total of cadres of this category.

Although our work of educating and training cadres is still far from perfect, we have at long last made a good beginning and also accumulated some experience. So long as we make persistent and unremitting efforts and continue to march ahead along the lines of regularization and institutionalization, by the next national party congress, greater progress will surely be made in the quality, both political and professional, of the whole contingent of our cadres, greater improvement will certainly be achieved in the extent to which they are more revolutionary, younger in average age and more knowledgeable and specialized, and new and heartening successes will surely be scored in socialist modernization.

DEVELOPING SCIENCE IS A STRATEGIC KEY POINT IN CHINA'S ECONOMIC CONSTRUCTION

Beijing RED FLAG in Chinese No 19, 1 Oct 82 pp 15-20, 26

[Article by Yu Guangyuan [0151 0342 6678]]

[Text] Comrade Hu Yaobang's report delivered at the 12th CPC Congress has solved a problem of fundamental importance to science, because it has explicitly defined the important strategic position of science in our country's socialist construction. This has required the entire party and people throughout the country to attach importance to science and actively support and promote the development of science from various aspects so that they will play an important role in accomplishing our country's general task in the new historical period.

With regard to science, stressing a scientific attitude and urging vigorous development of scientific undertakings in China is a guiding thought permeating the whole report. While recounting the great historical achievements of the 3d Plenary Session of the 11th CPC Congress, the report points out that the plenary session "has set right the guiding ideology of the party and reaffirmed the Marxist ideological, political and organizational lines." This is the victory of the people and science. The report adds that after the third plenary session, "our party thoroughly summed up its historical experience in all spheres and scientifically explained numerous questions encountered in practical work, which concerned theory and policy in the building of socialism," "in handling various practical problems, we have done our best to act in the scientific and comprehensive way required by Marxism." After citing party achievements scored since the third plenary session, the report concludes: "In the final analysis, our party has been successful in the above efforts because it has adhered to the scientific Marxist principles of combining theory with practice and of recognizing the people as the makers of history." While recounting the socialist nature of the building of spiritual civilization being carried out in China, the report reiterates that the first main element of socialist spiritual civilization comprises the following points: "the working class world outlook and scientific theory of Marxism; communist ideals, beliefs and moral values." In conclusion, the report stresses: "We must resolutely take over and learn to use the stand, viewpoint and method of Marxism-Leninism-Mao Zedong Thought, acquire a deeper understanding of the actual work in all fields, make systematic investigations and studies, and be good at conducting appropriate criticism and education and waging necessary struggles against wrong tendencies. Provided we persist in doing this, we can certainly accumulate new experience, break new ground in theory and carry forward Marxism-Leninism-Mao Zedong Thought under new historical conditions and in great new fields of practice." We communists should use Marxist scientific truth to guide our actions in revolution and construction and regard it as a basic way of conducting ourselves in society. Therefore, while discussing scientific undertakings, we should, first of all, pay great attention to and actively support Comrade Hu Yaobang's expositions contained in his report concerning the science of Marxism and the importance of sticking to, popularizing and developing it.

The second part of Comrade Hu Yaobang's report "Bring About a Comprehensive Upsurge of the Socialist Economy" expounds strategic objectives of economic development for the next 20 years. It points out: "From an overall point of view, what is most important in our effort to realize the objectives in economic growth is to properly solve the problems of agriculture, energy, transport, education and science." "In short, in the next 20 years we must keep a firm hold on agriculture, energy, transport, education and science as the basic links and the strategic priorities in China's economic growth." In other words, the report regards the development of science as one of the few strategic priorities in economic construction.

In our country's economic construction, there are many things that we should pay attention to. Things which have important influence over the overall situation in the development of our country's socialist economy are not limited to the above-mentioned agriculture, energy, transport, education and science. From some previous work experience, we realize that we should avoid adversely influencing the whole work because of neglecting it while grasping the key links. Therefore, the report urges "effective solution of these problems on the basis of an overall balance." However, among several items it is absolutely necessary to regard some of them as our strategic priorities. When people understand this point, they will know which kinds of work in our economic construction should be taken seriously. This also enables us to make proper arrangements while formulating our plans.

Why should we regard science as a strategic priority in economic construction? As the report pointed out, the most important reason is that "the modernization of science and technology is the key to the realization of the four modernizations." Here I would like to express some specific views on this subject, placing emphasis on productive force, production relations and certain aspects of the superstructure.

First of all, I would like to talk about the direct influence of science on the development of productive forces.

I intend to approach the subject from three angles:

1. Laborers are the most fundamental factors in the social productive force. To ensure continued, steady and rapid development of social

production and the realization of the strategic aims of our country's economic development for this century, we should have sufficient numbers of physical and mental laborers who have attained higher levels of knowledge and skill.

However, in our country, as the report has stressed, "large numbers of workers and staff members lack the necessary scientific knowledge, general education and work skill and there is an acute shortage of skilled workers, scientists and technicians." Complete figures concerning cultural and technical levels of workers and staff members are not yet available. The number of scientific and technical workers (the number of personnel in social sciences not included) who work in units under the ownership of the whole people in the engineering, agriculture, forestry and public health fields and those who are engaged in teaching and research work amounts to 5.71 million people. The proportion of graduate students is very small and the number of university graduates and technical secondary school graduates accounts for 40 percent of the total number of scientific and technical workers. The number of graduates of factory-run and spare-time universities and people with other qualifications accounts for 20 percent. In other words, the number of scientific and technical workers in our country is small, only about 50 or so among 10,000 persons. The percentage of scientific and technical workers in developed countries is much higher. In the meantime, the level of our scientific and technical workers is not high compared with others.

To be more specific, in 1981 there were only 330,000 agricultural and forestry technicians working in the units under the ownership of the whole people, accounting for 0.04 percent of the total agricultural population throughout the country. In other words, on average, there were 5 agricultural and forestry technicians per 100 production teams. Even if the number of agricultural and forestry technicians working in the collective units is included, the total number did not increase considerably. Apart from that, their technical level is uneven. According to incomplete figures, on an average there is only one university or college graduate to every 10 communes and there is only one secondary technical school graduate to every 2 communes. Among party and government cadres at all levels who are leading agricultural production, only a few have acquired professional knowledge. According to a preliminary survey carried out among 2,448 cadres at the provincial, prefectural and county levels who led agricultural production, only 88 of them were graduates of agricultural college or a secondary agricultural school, accounting for only 3.6 percent of the total number of those who were surveyed. ("Training Leading Cadres for Agriculture Is a Task Which Brooks No Delay," published in JIAOYU YANJIU, No 5, 1981)

The above-mentioned situation cannot but adversely affect the development of our economy. If we fail to adopt very effective measures, the problem of low scientific and technical levels among laborers in our country will become more and more serious as our national economy continues to develop.

To change this situation, we should, first of all, strengthen education. Therefore, the report regards the development of education as a key link in the strategic expansion. It stresses: "We must work vigorously to universalize primary school education, strengthen secondary vocational education and higher education and develop educational undertakings of all types and at all levels in both urban and rural areas, including training classes for cadres, workers, staff members and peasants and literacy classes in order to train all kinds of specialists and raise the scientific and educational level of the whole nation." However, education and science are inseparable. The main task and contents of educational work in intellectual education is to pass on scientific knowledge. In the meantime, the raising of teaching levels is also determined by the enhancement of the scientific level. To ensure that our laborers possess knowledge and skills which conform with modernized production, we should arm them with modern science. Therefore, training of talented persons is an important aspect of our efforts in making science serve economic development. In the past when we talked about the role of scientific work, we often stressed the importance of making science serve the national economy and national defense, but seldom mentioned the act of making science serve education. In his report delivered at the 12th CPC Congress, Comrade Hu Yaobang closely integrates education with science and declares that they are the strategic key links in our country's economic construction. This will help us to deepen our understanding of the significance of making science serve education in economic development.

2. With regard to the two essential factors of the social productive force, apart from the essential factor of having laborers who possess certain production knowledge and skills, we should also have another essential factor, that is, various means of labor (or instruments of labor) produced, mastered and utilized by laborers. When world history developed into capitalist society, the creation and invention of the advanced means of labor or the significant improvement of the existing means of labor were the results of scientific research.

With regard to the relations between science and the progress of means of labor, Marx and Engels made many brilliant expositions. A few years ago, when we criticized the fallacy of the "gang of four" which negated the fact that science and technology are productive forces, many comrades quoted the works of Marx and Engels as proof of the criticism. The following is the most frequently quoted passage: "Natural work does not manufacture any machines, engines, railways, telegrams, spinning machines and so forth. They are the products of the labor of mankind. They have become the organs mastered by the will of mankind in order to tame nature and the natural materials of the organs of mankind for carrying out activities in the natural world. They are the organs of mankind's minds which are created by the hands of mankind and are the materialized force of knowledge. The development of fixed capital has shown that social knowledge in general has become a direct productive force to a great extent. Therefore, the conditions of the progress of social life are considerably controlled and reformed by intelligence in general. This has demonstrated that social productive force has been produced to a great extent not only as a form of knowledge, but also as a direct organ of social practice and the progress in actual life." ("Complete Works of Marx and Engels," Vol 46, pp 219-220)

Some comrades are not accustomed to the way Marx expressed his ideas and think that what he said is difficult to understand. Actually, it is easy to understand the passage. What it means is that such a means of production as a machine is, of course, a "natural material," but it is not a natural thing. It is a "natural material" which is "a product of the labor of mankind" and "created by the hands of mankind." One of the differences between the role of this "natural material" and that of other "natural materials" is that the former is mastered by the "will of mankind" to "tame" things in nature. In this respect, it has the same function as the "organs" of the human body. It is like our arms, hands, legs and feet which are controlled by our will. These means of labor are things directly used by mankind to carry out "social practice" and "be involved in the actual process of life." They are the creation of the minds of mankind and things created by mankind by making use of knowledge and science. Therefore, it is appropriate to say that they are the "organs of human minds" and the "materialized force of knowledge." After they have been created, they can turn social knowledge in general into a direct productive force. Due to the fact that under the capitalist system machines and other such things are regarded as fixed capital, the history of the development of the means of labor under the capitalist system is taken as the history of the development of fixed capital. Therefore, Marx said that the history of the "development of fixed capital" reflects to what extent scientific knowledge has been turned into a direct productive force and how social productive force, which has been realized in the "form of knowledge," has been turned into the material productive force which has played a direct role in social practice and actual life with the creation, invention and production of machines and other such things.

We all know that social productive force is material force but that science itself is a spiritual thing. Comrade Hu Yaobang says in his report: "While changing the objective world, people also transform their subjective world and develop spiritual production and spiritual life in society. The result of this constitutes spiritual civilization." He also points out that the progress of science is the result of spiritual production in society and that science is an important aspect of spiritual civilization. Since sciences belong to the spiritual side, a process of "materialization" is needed in order to turn them into material force. The role of sciences in education which we talked about previously is manifested as materialization of sciences in the substance of the human brain; and the role of creation and invention in improving the means of labor which we are discussing now constitute the materialization of sciences in these means of labor.

With regard to the specific role of sciences in creating, inventing and improving the means of labor, anyone can cite many practical examples. The whole of the recent history of the world proves this. Here, we would like to remind people that they should not take the means of labor to mean merely machines and facilities. A correct understanding should be: All material means mastered by laborers to conquer and reform nature fall into the category of the means of labor. The increase in quantity and level of the instruments of labor and the creation and application of new means of labor play a role in promoting social production. For instance, the role played by fine varieties in agriculture and animal husbandry is the same as that played by machines in industrial production. By using them in production, we can effectively enhance labor productivity in agriculture and animal husbandry and increase the output of agricultural products in society. The successful cultivation of fine varieties is the result of materializing sciences.

Let us cite hybrid rice as an example. In 1970, scientific workers in our country discovered the scientific fact of the existence of a "wild sterile rice plant" (the wild staminiferous sterile rice plant). In 1972, we succeeded in cultivating a staminiferous sterile strain and its maintenance strain. In 1973, we sorted out a number of superior rice plants of a renewing strain. We thus succeeded in cultivating "three complete strains" of rice plants--"sterile strain," "maintenance strain" and "renewing strain," and the first batch of nonglutinous hybrid rice plants was thus produced. For many years scientists in foreign countries have tried hard to cultivate hybrid rice, but their efforts failed. However, our scientific workers have succeeded in this respect and have cultivated a variety of high-yield hybrid rice. After much hard work over the past few years, the acreage under hybrid rice was expanded to 80 million mu in 1980, and accumulated acreage since its popularization in 1980 amounted to 250 million mu and the accumulated output reached 27 billion jin. These figures show that this newly created means of labor has brought great benefits to our country's agricultural production. Moreover, the benefits it brings to society are permanent, that is, it will benefit the society year after year, and with the expansion of acreage under hybrid strains, the interests it brings to society will increase yearly. This practical example shows us how sciences promote the development of our country's economy through the creation of new means of labor.

3. Social productive force does not mean the mechanical combination of the two essential factors of productive force mentioned above; it means an organic integration of these two factors. Social productive force is organized material force. Laborers, as one essential factor of productive force, are organized in accordance with certain divisions of labor. Instruments of labor, the other essential factor of productive force, are formed into a whole according to the movement of materials in the process of production and their links in space and time. Laborers and means of labor are integrated according to a certain form. Therefore, the three kinds of integration between laborers, between means of labor and between laborers and means of labor all have the problem of whether they are integrated in the most rational and effective way. They also have scientific problems which must be solved. For instance, while carrying out a capital construction project, we should do well in organizing work teams and arranging various kinds of machines and means of labor. We should carry out the construction project in the most rational and effective way. When we are building a factory, we should draw up designs concerning the installment and arrangement of machines in every workshop. The work of installing

machines should be done in accordance with designs drawn in the process of carrying out the project. This is the way to complete the three kinds of integration mentioned above.

The three aspects of integration mentioned above are part of the problem of the organization of productive force, and involve a number of scientific problems which should be solved and studied. These three aspects are one of the important spheres in which sciences play an important role in the development of the economy. So long as we study these scientific problems, achieve results, draw correct conclusions and apply these achievements to practical work, we will certainly be able to promote the development of the national economy.

Here we are looking at the role of sciences in the development of the economy from the angle of turning sciences into direct productive forces. However, what we talk about and the examples we cite are based on the practice pursued by an enterprise of production or a capital construction unit. If we extend our vision to the whole of society, we will encounter problems involved in organizing productive force and formulating plans within the sphere of the whole of society. For example, we will encounter the problem of how to fully exploit and utilize human resources, land resources and other economic resources in our country. We will also encounter problems of how to apply and popularize advanced and appropriate production technology, how to establish a rational structure of production, how to achieve the balanced development of the national economy, how to achieve the effectiveness of labor in the whole of society, how to enhance economic returns and so forth. Scientific research will play a very big role in solving these important problems. The reason why we regard sciences as an important strategic area in economic construction is because sciences can play a very important and active role in solving these problems.

As well as understanding why we should take the development of scientific undertakings as a strategic link in the development of our country's economy, we should also consider another problem. In other words, we should understand the role of sciences in the development of production not only from the viewpoint that sciences can be turned into productive forces, but also from the viewpoint that sciences can solve problems arising in relations of production and in certain aspects of the superstructure.

We have seen that in his report Comrade Hu Yaobang stresses the problem of the reform of the socialist economy system. Analyzing why economic returns in various fields in our country are still poor, the report gives the reason that "there are still defects in the economic management system and the distribution system." In his report, Comrade Hu Yaobang expresses the view that during the Sixth Five-Year Plan, "we should consolidate and improve initial reforms in the economic management system and firmly grasp the work of drawing up general plans and adopting measures for reforms." He adds that during the Seventh Five-Year Plan, "we should gradually carry out the reform of the economic management system."

What is the socialist economic system? My views on this issue are: If by the fundamental socialist economic system we mean the unchanging foundation of socialist production relations in all socialist countries in all periods of development, then the socialist economic system means that various different socialist countries or one socialist country can have different specific socialist production relations in different periods. The reform of the socialist economic system means that we should seek to establish an economic system which can promote social productive forces most effectively. The socialist economic system includes the production relations of the socialist state-operated economy and the collective economy in both rural and urban areas, and the structures of socialist ownership. The problem of the economic system in a state-operated socialist economy, that is, the state-operated socialist economic management system, is important and complicated. This involves economic relations between the state, enterprises and laborers and the relations between the state economic management organs and local economic management organs at all levels. Labor wages, finance, goods prices, financial tax revenue, state commerce, foreign trade and so forth face problems in the economic system. As long as we can solve some of the problems which severely hamper economic development in these areas, social productive forces will be further liberated. The complexity of the production relations within socialist collective ownership cannot of course be compared with that of the production relations within the state-operated economy. However, the reform of the production relations within socialist collective ownership may also play a great role. Since the third plenary session, we have implemented various systems of remuneration according to output in our country's rural areas. This has demonstrated that any reforms which conform with the present level of productive force in our country will have the effect of greatly promoting productive force. The structures of socialist ownership in the socialist economic system include: the specific forms of socialist ownership which should be adopted in China today; the percentage of socialist ownership in the entire economy at present, what kinds of relations should be established and so forth. For instance, at present we permit the existence of the following forms of socialist ownership: 1) the economy of socialist state ownership; 2) the economy of "urban collective ownership" whose nature should be analyzed more accurately; 3) the economy of the collective ownership of the laboring masses in the rural areas; and 4) other socialist ownership. Of these forms, the "socialist state-operated economy plays the leading role in the national economy," whereas other forms of the socialist ownership can develop only on condition that they link with and depend on the socialist state-operated economy and accept its leading role.

As we mentioned above, since the concept of the socialist economic system covers a number of aspects and the problems involved in reforming these various aspects should be solved by scientific workers who can apply scientific knowledge which they have mastered, the role of sciences in promoting economic development should not be underestimated.

Of course, to promote the development of the socialist economy, the problems concerning production relations which scientific workers should study are not limited only to the reform of the socialist economic system. We realize that under our country's present conditions, we should permit the existence of certain nonsocialist economic forms. Therefore, we should study the issue which nonsocialist economic forms should be permitted, their position in our country's present socialist economic structures and the restrictions which should be imposed on them with regard to their existence and development. We should also study ways to properly manage these nonsocialist economic forms so that the party and government may formulate correct policy decisions. These are problems concerning the policies of our party and state toward the nonsocialist economy within a certain historical period. If we achieve good results in the study of these problems, our research work will play its proper role in developing the national economy.

Besides this, in order to do economic work properly, we should also study problems occurring in the realm of the superstructure. The problem of the administrative and management organs in charge of economic work, the problem of economic legislation and judicature, the problem of extending socialist democracy to the sphere of economic life and so forth belong to this category. The problem of improving state plans and management work also involves production relations and the superstructure.

We should do our utmost to put our socialist economic construction on solid scientific foundations. Since there are so many important scientific problems to be solved in our country's economic construction work, and since scientific research can play such a great role in economic development, in addition to the fact that we suffered losses in our work in history due to the lack of scientific research and the fact that in the economic work departments, there are still many people who fail to understand the significance of scientific work and work blindly to a great extent because of this, and frequently solve problems according to old rules and conventions, then it is a matter of deep significance for the party to regard the development of scientific undertakings as one of the strategic links in our country's economic construction.

The purpose of defining the strategic significance of sciences in our country's economic development is to develop our country's scientific undertakings more efficiently. We should not rest content with merely understanding the significance of sciences. Actions are more important. Scientific workers should enthusiastically answer the call of the 12th CPC Congress and work hard and struggle actively to implement and accomplish the guiding principles and tasks put forward by it (including, of course, the guiding principles and tasks of developing our country's scientific undertakings). Comrades working in other departments should also do their best to support scientific work in the light of their division of labor. Departments in charge of logistic and service work for scientific workers should also have a correct understanding of their service work in order to do it well. Planning and financial departments should do their utmost to take seriously the work of allotting the necessary funds and making investments in scientific work. Comrades in charge of leadership work in various localities and departments should pay more attention to scientific work and strengthen party leadership over it.

In his report, Comrade Hu Yaobang also points out: "In the past, owing to the influence of 'left' ideas and the small-producer mentality, erroneous views such as the underestimation of the importance of education, science and culture were rife in our party over a fairly long time." He adds that the party has "made great efforts to eliminate these incorrect views. We are determined gradually to step up cultural development so that it will no longer lag behind economic growth." He goes on to say: "We have worked hard to carry out the party's policy concerning intellectuals and to enable the whole party and society to realize that, like workers and peasants, intellectuals are a force we must rely on in building socialism. We are determined to do everything possible to create favorable conditions in which the mass of intellectuals can work securely and enthusiastically in the interests of the people." This guiding ideology brought out by the report is closely connected with the development of our country's scientific undertakings. We should attach importance to it and, as the report stresses, persist in "doing much careful ideological work and effective organizational work."

The above-mentioned points should be put into action in all spheres after defining the fact that scientific work is one of the strategic links in our country's economic construction. With concerted efforts from all quarters, our country's scientific undertakings will develop more effectively and their great role in economic development will be fully demonstrated.

AN IMPORTANT BASIS FOR REFORMING THE ECONOMIC SYSTEM

Beijing RED FLAG in Chinese No 19, 1 Oct 82 pp 21-26

[Article by You Lin [2589 2651]]

[Text] In his report to the 12th CPC Congress, Comrade Hu Yaobang clearly explained the general purpose of reforming the economic system, briefly and profoundly expounded the leading position of upholding the state-run economy and developing diverse economic forms, and the relations between the state and the enterprises of various economic forms, particularly the state-run enterprises. He also pointed out the correct implementation of the principle of the leading role of the planned economy and the supplementary role of market regulation and other important problems. This has further pointed out the direction for establishing an economic management system that conforms with the conditions of our country and provides us with an important basis for reforming our economic system.

I

Comrade Hu Yaobang pointed out in his "report": "To yield the best results, all our economic work, principles, policies, plans and measures must be based on overall arrangement, on taking into consideration the interests of the state, the collective and the individual and on fully arousing and scientifically organizing the initiative of the central authorities, the localities, departments, enterprises and the laborers." This is also applicable to the reform of the economic system.

Why is it necessary to reform our economic system? In the final analysis, it is because there exist defects that are not conducive to stimulating the initiative of our economy in various fields. After the basic accomplishment of socialist transformation, our party called on us to correctly handle the relations between the state, the production unit and the individual laborer, to correctly deal with the relations between the central authorities and the localities, to appropriately divide the decisionmaking power in all fields and give consideration to the interests of every aspect. But actually we have for a long time neglected the power and interests of the localities, the production units and the individual laborers, thus causing the situation of inflexibility and excessive management from the center. As manifested in the economic forms, a lot of work that was suitable for the collective and individual businesses to run was monopolized by the state; as manifested in planned management, the state attempted to manage all matters whether big or small and did not admit the necessity of regulation by market mechanism for the operation of enterprises and the production of some products, economic levers were seldom applied to guide economic activities for which it was unnecessary to issue mandatory quotas and there was excessive direct planning; as manifested in financial affairs, there was monopoly in the income and expenditure of state-run enterprises and there was no profit retention by enterprises according to how well or badly they ran their business. Moreover, egalitarianism was prevalent in the distribution of income among the laborers. All these things have seriously affected the enterprises' and staff and workers' concern, proceeding from their material interests, for doing a good job of production, operation and management, and even if there were such enthusiasm, it would be difficult to bring it into play because they are bound hand and foot.

Therefore, to reform the economic system we must, first of all, readjust the powers of various fields and particularly extend the powers of the enterprises. Enterprises are the basic units engaging in economic activities. The initiative of enterprises, great or small, greatly affects the speed at which the national economy can be developed. In order to actively exercise their duty according to concrete conditions, the enterprises should have certain power in planning and arrangements, purchasing and selling of goods, the use of funds, disposition of productivity, and so on. Under the prerequisite of accepting planned guidance by the state and administration by industrial and commercial offices, the cooperative enterprises collectively owned by the laboring people should have complete initiative in their own hands. It is also quite necessary for state-run enterprises to have initiative in operation and management. This initiative is of course limited and is within the range of state permission and observation of unified state direction. If it goes beyond this limitation, it would impair or even change the nature of the state enterprises and cause confusion in our socioeconomic life. Even within this limitation, the state should conduct guidance, and check and supervise the enterprises on how to execute their power to prevent blindness due to abuse of their power.

It is very important to handle well the relations between the central authorities and the localities, that is, the vertical and horizontal relations in our country. Ours is a large country with great differences in various provinces, municipalities and autonomous regions. It is unnecessary and impossible for the center to concretely control all their economic activities. Past experience proves that if the central authorities control things too meticulously, they stifle the initiative of the localities. This is one aspect of the situation. On the other hand, we must also be aware that the development of the localities cannot be divorced from the situation as a whole. For instance, many basic installations and production conditions need overall planning by the state and those economic conditions that are connected with the situation as a whole need to be provided by the central authorities. Without the efforts of the central authorities, it would also be impossible for the economy of various localities to develop successfully. Therefore, we must implant the idea of coordinating all the activities of the nation like moves on a chessboard, and under the prerequisite of subordinating part to the whole, fairly combine the initiative of the localities with that of the central authorities.

The readjustment of power in various fields is important for arousing the initiative in various respects. But under socialism, what is still more important is to readjust the relations of material interests in various fields. According to the Marxist viewpoint, fundamentally, all the activities of people are for material interests, that is, they are all prompted by material interests. The problem is, material interests have different class nature and social nature in different societies. In the socialist economy of our country, the public ownership of the means of production combines all production units and laborers together and the interests of the whole of the working people become their fundamental interests. Under this prerequisite, they still have partial and individual interests. The interests of the whole of the working people are not only the common interests of each member as part of the whole, but also the common interests of the laborers as members of a certain production unit and as individuals. This is because the development of some production units, including the production units under the collective ownership system, depends on the development of the entire social economy; and the improvement of the standard of living of the working people and particularly of the workers of the state-run enterprises depends on increasing social production and raising labor productivity. Therefore, we must unswervingly maintain that increasing and promoting the interests of the whole is the main objective and motive force of the state-run enterprises in carrying out economic activities. As for enterprises in the collective ownership system, besides their own interests, they should also show consideration for the interests of the state and, in addition to the interests of their own unit, they should also have other objectives and motive force. We must also be aware that in addition to the impetus of common interest, there are also the interests of the localities, departments, production units and laborers. For instance, providing the state enterprises with necessary material interests, so that there is a definite connection between the achievements of enterprise operation and the collective and individual interests of the enterprise workers, makes the workers work more diligently and the enterprises try by every means to run management and operation well. Excessive emphasis on the interests of the latter respects, or even overemphasis on them at the expense of the interests of the whole, is certainly wrong; neglecting or even denying them is also wrong. Facts have repeatedly proved that neglecting the interests of any one respect will affect the initiative in that respect and hinder the development of the national economy. Our task is to correctly handle the relations of interest in various respects in the light of the concrete conditions prevailing at any one time, so that they can coordinate, cooperate and help one another forward.

In a word, the purpose of reforming our economic system is to fully arouse the initiative of various fields through readjusting their powers and interests so that they can play their role as effectively as possible and promote the building of socialist modernization.

II

In reforming the economic system, we must rationally define the relations between the state and enterprises. The relations between the state and enterprises includes what enterprises should be operated and owned by the state, and how the state should manage state-run enterprises, collective enterprises owned by the laboring masses and the individual economy. In his report, Comrade Hu Yaobang made ample exposition on this problem.

Comrade Hu Yaobang clearly pointed out in his "report" that we must develop diverse economic forms under the prerequisite of upholding the leading position of the state-run economy. So-called diverse economic forms, in addition to the state sector, refer first of all to the cooperative economy collectively owned by the laboring masses. This kind of economic form should be the main form in rural areas not only at present but also for a considerable time to come. A considerable part of handicrafts, industry, building industry, transport, commerce and service trades in cities and towns should also be run by the collective. Next is the individual economy of the laborers. We must encourage the appropriate development of the individual economy of urban and rural laborers as a necessary and useful complement to the public economy, within limits prescribed by the state and under the supervision of industrial and commercial administrations. Why must we do this? In sum, it suits the productive forces of our country at the present stage. The development level of the productive forces of our country at the present stage is low and very unbalanced. On the one hand, we have a large number of enterprises with a high level of socialization in production. The very nature of these enterprises demands ownership and control by the whole society and that they be operated by the state as the representative of society. On the other hand, we also have many enterprises with a rather low level of socialization in production; they are suited to collective operation and some are only suited to individual operation. If the state also owned and operated these enterprises, it would be unfavorable for giving scope to their specialization and the initiative of the working people who operate these enterprises, consequently affecting the development of the entire economy. As Comrade Hu Yaobang said in his "report": "Only through the rational distribution and development of diverse economic forms is it possible to invigorate the urban and rural economy and make life more convenient for the people."

Since the 3d Plenary Session of the 11th CPC Central Committee, cooperatives financed and run by young people and other residents have spread in many urban areas. The number of individual workers in urban areas has gradually increased, by 1981 they had reached 1.13 million people. A number of localities have turned small-scale state-run commercial and service trade enterprises, such as public bathhouses, barbershops, garment shops and retail shops into cooperatives or let workers undertake and operate them on a collective or individual basis. These localities have also turned the "collective" enterprises with unified responsibility for profits and losses into enterprises with sole responsibility for their own profits and losses. We have achieved quite good results in the above undertakings. It seems that from now on, in addition to energetically developing the cooperative economy collectively owned by the laboring masses and appropriately developing the individual economy, the small and fairly small-scale state-run enterprises can also be turned into enterprises with sole responsibility for their own profits and losses in the light of need and possibility.

In China, not only can the socialist economy not abolish the state-run economy, on the contrary, it must uphold the leading position of the state-run economy. The state should own and operate the departments and enterprises such as banks, railways, civil aviation, river and ocean going shipping, posts and telecommunications, steel, nonferrous metals, fuel, electricity, machine building, chemical industry, building materials, textiles, light industry and enterprises in other important departments, wholesale departments, a considerable number of retail shops in the field of commerce, and so on. With these departments and enterprises in hand, the state controls the economic lifelines of the country. The state sector can thus play the leading role in the entire national economy. In his "report," Comrade Hu Yaobang drew a scientific inference: "The consolidation and growth of the state sector are the decisive factors in ensuring that the collective economy of the laboring masses will advance along the socialist road and that the individual economy will serve socialism." The profound implications of this inference merit our careful comprehension. As known to all, in capitalist society, there are cooperatives run by members who are shareholders that draw extra dividends according to the amount of shares they possess. These cooperatives are usually manipulated by a few people who have most of the shares, and the operation in particular cannot but be subject to the control of capitalist production and circulation. Therefore, essentially it is still a sort of "collective capitalist organization." In a socialist country, only when the cooperative economy is combined with the socialist state-run economy, can its nature be fundamentally changed. Only a powerful state-run economy can energetically guide its operation and management in accordance with the principles of socialism so that it develops along the road of socialism. Without this form and without the energetic guidance of the state-run economy, by only relying on the management of the socialist state regime, it would be difficult to restrict the possibility of spontaneous tendencies and getting out of hand departing from the interests of the whole. Therefore, under the conditions of China, there would be no socialist economic system and socialist planned economy with only the collective economy and without the state-run economy. This is true for the collective economy as well as for the individual economy. The individual economy is always attached to the economic form that occupies the dominant position. Only with the existence and development of the public ownership economy that upholds the leading position of the state-run economy and under supervision by the industrial and commercial administrative departments, can the individual economy be a complement to the socialist economy and serve socialism.

In order to ensure the leading position of the state-run economy, we must define the relations between the state-run enterprises. First of all, as for the state-run economy, the state is certainly the owner of the enterprises and controls important activities of the enterprises. On no account should we neglect the achievements of the state-run economy due to the defects of the economic system and neither should we have the idea of there being no hope in modernization without thoroughly abolishing the state-run enterprises. What will happen if we abolish the state-run economy in our country, turn the state-run enterprises into independent economic bodies and allow the enterprises themselves to completely manage the regular economic decisionmaking of the enterprises? It would mean to separate again the "productive force that is not suitable for any other management except management by society" ("Selected Works of Marx and Engels," Vol 3, p 319) spoken of by Engels; not only placing the secondary but also the main part of industry and commerce under the control of the collective ownership by the laboring masses who are vast in number and scattered, so that they are combined in narrow spheres, causes acute contradiction between mass production and partial ownership. Under such circumstances, they will contend with each other for their own partial benefit and the interests of the whole of the laboring masses would be undermined and impaired. It is quite obvious that this certainly cannot be the foundation of our economic management.

We must also not regard the state enterprises as an abacus, taking every action by moving the beads, we must not collect all the profits of the enterprises without letting them retain any. As we have mentioned before, under the unified control of the state, it is quite necessary for the enterprises to have certain flexible power and benefit. Recently, we have achieved quite good results in extending the power of the enterprises and applying the system of economic responsibility. Its main significance is that we have effectively overcome the idea of egalitarianism between the enterprises and between the workers in the enterprises, so that the enterprises and workers are further motivated in running the enterprises well and tapping potentials. It is unquestionable that by applying the economic responsibility system, we need above all to define the economic responsibility that the enterprises have to undertake toward the state and that the workers have to undertake toward the enterprise respectively, and at the same time provide the enterprises with certain economic powers and due economic benefits so as to combine responsibility, power and benefit together.

III

One of the fundamental problems in the reform of the economic system is to correctly implement the principle of the leading role of the planned economy and the supplementary role of market regulation.

As the opposite of the anarchy of capitalist production, the planned economy came into being after the realization of the public ownership system. Under the capitalist system, on the one hand there is organizational division of labor in capitalist enterprises, while on the other the whole social production is subject to control by spontaneous forces. In capitalist society, the laborers forfeit their right to control their own social relations and the distribution of social labor in various departments is completely regulated by the market. The necessary proportion of mass production is only reluctantly maintained through fierce turbulence and crises and with the national economy constantly suffering serious disruption. But under the public ownership system, due to the elimination of the separation of the ownership toward socialized production and the establishment of direct links between production and demand, it is then necessary and possible for the national economy to develop in a planned way. The words "planned economy based on public ownership" mentioned by Comrade Hu Yaobang in his "report" pointed out the interdependent relations between the planned economy and the public ownership system. One of the characteristic economic laws of socialism and communism is that the national economy develops in a planned way. Planned economy came into being on the basis of public ownership and from another important aspect it also manifests the essence of the socialist economy.

The socialist economy must be developed in a planned way. But in a certain period of a country, the range, length and height of planning can only be determined according to the concrete conditions. Comrade Hu Yaobang pointed out in his "report": "Planned production and circulation cover the main body of our national economy. At the same time, the production and circulation of some products are allowed to be regulated through the market without being planned, that is, by letting the law of value spontaneously play a regulatory role, within the limits prescribed by the state's unified plan and in the light of the specific conditions at different periods. This serves as a supplement to planned production and circulation, subordinate and secondary to it but essential and useful nonetheless. The state ensures proportionate and coordinated growth of the national economy through overall balance by economic planning and the supplementary role of market regulation." In sum, we must uphold the principle of the leading role of the planned economy and the supplementary role of market regulation for a long time.

What is the objective basis of this principle? First of all, in the national economy of our country, the economy under the public ownership system occupies the dominant position, while the state-run economy also occupies a leading position. This determines that the principal part of the national economy must be planned production and planned circulation. Otherwise, the economy under the public ownership system would be in a state of decentralization and would not develop normally. Second, in the economy under the public ownership system, there are a considerable number of collective enterprises owned by the laboring masses and state enterprises that can be turned into enterprises with sole responsibility for their own profits and losses. There also exist a small individual economy outside the public ownership system. The production and circulation of part of the products of these enterprises should be carried in a planned way, while the production and circulation of another part of products (mainly various small commodities) should be arranged by the enterprises themselves in accordance with the changes of supply and demands on the market. Certainly, the state should not try to refuse to have anything more to do with the matter, but should strengthen control through policies, decrees and administration by industrial and commercial administrative departments and should help enterprises with the supply of certain important raw and semifinished materials.

There were many defects in our planned work in the past, among them an important point is that planning covered a wide variety of things and no products or enterprises were excluded from plans to be regulated by the market. The result was what should have been strictly controlled was not controlled strictly enough, that is, what should have been incorporated into the plan was not strictly controlled, thus weakening the scientific and authoritative nature of the plans; what should have been flexible was not flexible enough, that is, what should not have been incorporated into the plan was controlled, thus causing the variety of commodities to be monotonous, lacking in quality and causing inconvenience to the people's life. This shows that to ensure the coordinated and proportionate development of the national economy, we must mainly rely on the overall balance of the planned economy and at the same time make use of the supplementary role of market regulation.

Allowing the production and circulation of part of the products not to be planned but regulated by the market, will this affect the nature of the planned economy? Certainly not. That is because, first, it is just supplementary to the planned economy and is subordinate to the planned economy; and second, the range of market regulation is determined by unified planning. Therefore, our economy, in general, is a unified planned economy.

In order to make the development of the economy centralized and unified as well as flexible and diversified, besides the part that needs not be planned, the part that needs planned production and circulation should also take different forms in different circumstances.

One kind is, plans of a mandatory nature must be enforced in regard to the production and distribution of means of production and means of subsistence in the state sector which are vital to the national economy and the people's livelihood, and especially in key enterprises vital to the whole economy. The "report" indicated: "This is a major manifestation of China's socialist system of ownership by the whole people in the organization and management of production." This important inference helps us to further clarify any misunderstanding. The realization of the power of the state as the owner must undoubtedly be manifested in the distribution of income, but what is more important is that it is manifested in directing the production and operation of enterprises that must be directed by the state. In our socialist economy, if the state has only the right of ownership of some state-run enterprises, but has no power to control the means of production and labor force, that is, no power to direct the production and operation of the enterprises, then these enterprises are no longer state-run enterprises. Even for the collective economy, the state should issue mandatory quotas in accordance with needs; for instance, for the purchase of fixed quotas of grain and other important agricultural and sideline products by the state. This is by no means to say that mandatory planning cannot be appropriately reduced, it is entirely necessary for the state-run enterprises to have more flexibility. But the production and distribution of important products and the economic activities of the important enterprises must be carried out according to the state's mandatory plans. Only in this way can we stabilize the economic situation, ensure the proportionate development of the national economy, and effectively bring into play the role of guiding plans, and the part regulated by the market can be a useful complement to the planned economy. Therefore, mandatory plans are necessary not only under specific conditions, but also necessary and indispensable under general conditions. It is in fact the crux of the principle of the leading role of the planned economy and the supplementary role of market regulation and the basic indication of a planned economy.

Another kind is, enforce guiding plans for some products and enterprises that are less important compared to the products and enterprises that practice mandatory planning, by applying economic levers to ensure their realization. The enterprises have the right to change the plans and quotas issued by the state, but must report them to the responsible departments for the record. When necessary, the state can also exercise administrative intervention.

Aimed at the defects of the past of not attaching importance to the role of the market and not being good at applying the law of value and economic levers, the "report" pointed out that, whether in mandatory planning or in guidance planning, we must strive to make them conform to objective reality, constantly study changes in market supply and demand, and consciously make use of the law of value. For instance, when plans demand that production of certain products in short supply be increased and that production of some products in excessive supply be reduced, list the price of the former products a bit higher and the latter a bit lower, then that will promote the accomplishment of the plans. Certainly, we cannot exaggerate this role and think that the part under the planned economy should also be regulated by the market. By regulating, we mean determining what kind of products are produced, their quantity and how to control them. The market regulation mentioned in the "report" is controlled by the fluctuations of prices caused by the changes of market supply and demand. It is quite obvious that the enterprises that enforce mandatory planning are not the same. The enterprises that enforce guidance planning are directly affected by changes of price, taxation and credits, but these economic levers are applied by the state in a planned way. Therefore, they are controlled by planning and not regulated by the market.

The principle of reforming the economic system of our country in the future is to adopt the forms of mandatory planning, guidance planning and market regulation in accordance with the different circumstances of products and enterprises. Enforcing this principle is a major reform compared with the present planned management system. At the same time, we must correspondingly reform other aspects of the management system (for instance, gradually reform the pricing system and price control under the prerequisite of basically keeping prices stable). The tasks are great and certainly cannot be accomplished in a short time. The "report" pointed out that we must work out at an early date the overall plan for reform and the measures for its implementation in the Sixth Five-Year Plan and gradually develop the reform of the economic management system in the Seventh Five-Year Plan. This arrangement is positive and safe as well. Provided that we follow the direction pointed out by the party Central Committee, comprehensively analyze the present economic system of our country, conscientiously study the experiences of other countries, first sum up our own experiences and on this basis work out feasible overall plans for reform and the measures for its implementation, and advance step by step forward, we can establish an economic management system that best conforms with the condition of our country in the predetermined period and ensure the normal development of the national economy and the triumphant realization of the four modernizations.

EXCERPTS FROM SPEECHES MADE AT A FORUM ON STUDYING 12TH CPC CONGRESS DOCUMENTS

Beijing RED FLAG in Chinese No 19, 1 Oct 82 pp 27-34

> [Text] Editorial note: On 17-18 September, this periodical invited some comrades from economic circles to a forum on studying the documents of the 12th party congress. Excerpts from speeches at the forum will be published in succession starting from this issue.

Xue Muqiao [5641 2550 2890]: "Build Socialism With Chinese Characteristics"

In his report to the 12th party congress, Comrade Hu Yaobang expounded in great detail the new guiding ideology of socialist modernization which has gradually developed from the 3d Plenary Session of the 11th CPC Central Committee. In his opening speech at the congress, Comrade Deng Xiaoping made a high level summary of this guiding ideology by pointing out: "To integrate the universal truth of Marxism with the concrete realities of China, blaze a path of our own and build socialism with Chinese characteristics--this is the basic conclusion we have reached in summing up long, historical experience."

Ours was a backward semicolonial and semifeudal country before liberation. After more than three decades of construction since liberation, great changes have taken place in the outlook of our country. However, viewed from the level of its economic development, China is still a developing country with the peasants accounting for the great majority of the people. In order to build our country, on such a base, into a modern socialist state with a high degree of civilization and democracy, it is of course necessary to proceed from reality and take our own path. As I understand it, socialism with Chinese characteristics should chiefly be provided with the following features:

1. With respect to ownership, we are still unable to establish what Marx called ownership by the whole society. Neither should we indiscriminately copy the pattern of what Stalin called coexistence between ownership by the whole people and collective ownership. Due to the relatively low and uneven development of China's productive forces, the forms of ownership should be

more complex. Ownership by the whole people and collective ownership should act as a base and there should be long-term coexistence of diversified economic forms. Even the economy under the ownership of all the people and under collective ownership should also practice, in light of different specific conditions, various methods of management and administration. In agricultural production, particularly the agricultural production that relies chiefly on manual labor, it is necessary to establish various forms of the production responsibility system by bringing into play the initiative of unified management by the collective and independent management by the laborer. It is necessary to have both unified planning by the collectives and division of labor with individual responsibility between the individual, household and group. The state economy should not assume overall responsibility for profits or losses. It should in the light of different conditions, practice different forms of the economic responsibility system to different degrees, including the responsibility system for profits or losses. In cities, it is also necessary to develop the economy under collective ownership (including small cooperatives characterized by fund raising, joint labor and distribution chiefly according to labor) and a small amount of individual economy. Will the development of nonsocialist economic forms (such as individual economy) in cities weaken the leading position of the socialist state economy? No. In the early 1950's, privately owned industrial and commercial enterprises were in extensive operation, but the state economy was still in a leading position. Now the state economy is very powerful. The existence of a small number of nonsocialist economic forms will not affect the leading position of the state economy but is a necessary and useful supplement to the state economy.

2. It is necessary to handle the relationship between agriculture, light and heavy industry and the question of speed according to China's characteristics. The 156 projects, chiefly heavy industry, carried out in the period of the First Five-Year Plan attained very good construction results. However, the development of agriculture and light industry was rather slow, with the result that they failed to fully meet the needs of urban industrial development and the people's livelihood. Therefore, Comrade Mao Zedong pointed out in 1956 that, while giving priority to the development of heavy industry, it is necessary to attach special importance to the development of agriculture and light industry and to develop heavy industry with the funds accumulated from agriculture and light industry. It was a pity that, starting in 1958, a 3-year "Great Leap Forward" was launched, which resulted in a serious disproportion between agriculture, light and heavy industry. It was not until 1965 that the disproportion was basically reversed by means of readjustment.

The 10 years of national disorder during the "Cultural Revolution" threw the entire national economy into disorder. In the 2 years after the smashing of the "gang of four," continued implementation of the "left" policy once again revealed the disproportion between agriculture and light and heavy industry, which had developed over the years. After its third plenary session, the CPC Central Committee put forward the principle of readjusting, restructuring, reorganization and upgrading, gradually reduced investment in capital construction, readjusted the ratio between agriculture and light and heavy industry and greatly improved the livelihood of the people so that a prosperous new situation emerged in the national economy. However, the achievements of readjustment have not been consolidated and the reform of the economic management system has just started. We have not been able to effect a fundamental turn for the better in the financial and economic situation. In his report to the 12th party congress, Comrade Hu Yaobang said that during the Sixth Five-Year Plan period, it is necessary to continuously implement the policy of readjusting, restructuring, reorganization and upgrading, practice strict economy, oppose waste and focus all economic work on the attainment of better economic results. It is very important to do so.

It was also pointed out in the report that, in the two decades between 1981 and the end of this century, we should strive, while steadily working for more and better economic results, to quadruple the gross annual value of industrial and agricultural production. In order to realize this objective, we must take the following two steps in our strategic planning: In the first decade, aim mainly at laying a solid foundation, accumulating strength and creating the necessary conditions; and in the second, usher in a new period of vigorous economic development. This strategic plan has been formulated in the light of China's specific current conditions. In order to bring into full play the economic results of production, we should no longer blindly seek false production growth rate. In the period of the Sixth Five-Year Plan, we would rather have a temporary slower production growth rate in order to focus our chief attention on the attainment of better economic results. Provided that we can achieve this point, we will certainly be able to usher in the new period of vigorous economic growth in the 1990's.

3. It is necessary to continuously carry out reform of the economic management system. Since the First Five-Year Plan, we have gradually effected planned management of the national economy on the basis of public ownership of the means of production. This conforms to the requirements of socialist economy. The chief shortcomings in our previous work lay in the fact that in certain aspects we set too many or too rigid restrictions through planning and thus hampered the initiative of the localities and enterprises. In his report, Comrade Hu Yaobang pointed out: Planning should take different forms in different circumstances. Plans of a mandatory nature, guidance plans and regulation within certain limits by market mechanism must be enforced according to the importance of products and enterprises in the national economy and the people's livelihood. In both mandatory planning and guidance planning, we must strive to conform to objective reality, constantly study changes in market supply and demand, conscientiously make use of the law of value and such economic levers as pricing, taxation and credits to guide the enterprises in fulfilling state plans, and give them varying degrees of power to make decisions as they see fit. Only in this way can state plans be supplemented and improved as required and in good time in the course of their implementation. We must correctly define the respective scope and limits of mandatory plans, guidance plans and regulation by market mechanism and establish an economic administrative system suited to China's conditions so as to ensure the healthy growth of the national economy.

Over the past 3 years we have gradually expanded the powers of various localities and enterprises in making decisions and have attained good results in bringing into play the initiative and creativity of localities and enterprises. The problem is that, after the expansion of the power of localities and enterprises in making decisions, the restricting role of mandatory planning has been weakened to a certain degree, bringing about various phenomena such as blind production and duplicate construction. Therefore, it is necessary for us to formulate a complete set of economic laws and regulations in order to prevent the various localities and enterprises from abusing their power of decisionmaking. It is particularly necessary to be good at applying the economic levers in order to ensure the satisfactory accomplishment of mandatory planning and guidance planning.

Reform of the planning system is not only confined to the planning system itself but also involves the systems of credits, labor, wages as well as financial management. These reforms can only be achieved gradually.

Yang Bo [2799 3134]: "State and Tasks of Light Industry in the New Situation"

The strategic objective, emphases and measures and the series of principles and policies for China's economic construction listed in the report to the 12th party congress are the outcome of integrating Marxism-Leninism with China's reality. They are all correct. Provided that we unswervingly and realistically work in the spirit of the 12th party congress and conscientiously do our jobs well, we will certainly be able to realize our strategic objective. Here, I would like to talk about industrial development.

There is a view which holds that since no mention was made of the three strategic emphases of economic construction issued by the 12th party congress, the future development of light industry may perhaps be slowed down or relaxed. In my opinion this view is incorrect. As a matter of fact, grasping the three emphases of agriculture, energy and transport and education and science is conducive to the more speedy development of light industry and other production and construction undertakings and the steady improvement of people's living standards. 1) For a considerably long period in the past, China's light industry has primarily relied on agriculture for its raw materials. The reason for light industrial output value to register an average annual increase of 10 percent over the past 3 years is a direct outcome of the speed development of agriculture, particularly the diversified undertakings. Only by strengthening agriculture in the future will it be possible to ensure the steady growth of light industry. 2) Although the ratio of energy consumption in light industrial production is smaller than in heavy industry, its absolute amount will become more and more. Only when energy construction has been developed will it be possible for light industry to develop more speedily. At the same time, the development of communications and transportation also constitutes a basic condition in ensuring the allocation of raw materials for light industrial production and the sales of light industrial products. 3) The development of educational and scientific undertakings is a fundamental guarantee for improving the technological and management level of light industrial production. At present, the scientific and technical strength of light industrial departments is weaker than that of other departments, with the scientific and technical personnel accounting for only 1.06 percent of all staff members and workers. The technical force of No 2 light industry is even weaker. Without competent technical and management personnel armed with modern scientific knowledge and without advanced technological equipment, it is difficult to raise the level of light industrial development. Therefore, the fact that the CPC Central Committee has designated agriculture, energy and transport and education and science as the strategic emphases has not weakened or overlooked the development of light industry but has created better conditions for the development of light industry. Just as Comrade Hu Yaobang, in his report to the 12th party congress, pointed out: "Effective solution of these problems on the basis of an overall balance in the national economy will lead to a fairly swift rise in the production of consumer goods, stimulate the development of industry as a whole and of production and construction in other fields and ensure a betterment of living standards."

Since the 3d Plenary Session of the 11th CPC Central Committee, following the speedy development in consumer goods production, great changes have taken place in China's market supply conditions. The phenomenon of "buying whatever goods are available and joining a queue when there is one" that was in existence for many years in the past has basically disappeared. The masses of people have changed their practice from holding money in readiness for panic purchase into saving money for the right moment to purchase or holding money in readiness for a purchase of their choice. However, this certainly does not mean that the development of China's light industry is good enough. As a matter of fact, there is still a very wide gap between the production of consumer goods and the needs of the masses of people and, in particular, we are still far from being able to meet the needs of the 800 million peasants in the vast rural markets. Now, when people begin to have some choice concerning the quality, designs and colors of light industrial products, we have discovered, in our light industrial production, the problem of many products which do not conform to the needs of the people. For example, some products are unmarketable and have to be kept in stock for a long time. This is primarily because their quality is poor and their designs and colors are not readily marketable. What demands should we set on our work in this new situation? Generally speaking, we can summarize them in two sentences, that is, "change the look and improve the quality." By changing the look we mean that it is necessary for us to: 1) change the backwardness manifested in poor quality and few designs and colors in industrial products; and 2) change the mental outlook of the staff and workers to enable them to keep abreast of the development of the objective situation. Every person, from the leading cadres to every staff member or worker, should enhance revolutionary vigor and jointly fight for the realization of the grand objective set forth by the 12th party congress. By improving quality we mean that it is necessary to vigorously improve our technological and management level and to attach particular importance to the application and popularization of new technology. In brief, we should focus all our work on the attainment of better economic results and cultivate the idea of wholeheartedly serving the broad masses of consumers. It is necessary to take into account the needs of the 200 million urban inhabitants but it is all the more necessary to focus our work on meeting the needs of the 800 million peasants. Not only is it necessary to pay attention to the economic results in relation to the state and supply the state with more accumulation, it is also necessary to pay attention to the beneficial results of products when used by customers and to think about the interests of customers. It is necessary to pay good attention to current production and have long-term planning. Great efforts should be made to produce more and better light industrial products which are cheap and readily marketable and to step up sales service in order to satisfy as much as possible the broad masses of consumers. This also constitutes a requirement of the basic socialist economic law. Moreover, it should be pointed out that our light industrial departments bear the heavy responsibility of building socialist material and spiritual civilization. At present, in the production of some consumer goods, there is a phenomenon of blindly imitating the so-called new patterns from foreign countries or pandering to the vulgar interests of certain people. This should merit our attention. The manufacture of material products should help but not obstruct the building of socialist spiritual civilization.

Li Chengrui [2621 2052 3843]: "Quadrupling the Gross Annual Value of Industrial and Agricultural Production Should Be Based on Improving the Economic Results"

The grand objective expounded in the report to the 12th party congress consists of unity between quality and quantity and unity between results and speed. Quadrupling the gross annual value of industrial and agricultural production should be based on improving the economic results. Both are closely related with, and are inseparable from, each other. The key to achieving a fundamental turn for the better in the financial and economic situation in the next 5 years lies in improving the economic results and maintaining suitable and realistic speed in order to create more net income and, on this basis, strike a close balance between revenue and expenditure and in credits. Exaggerated speed and overstock of products will bring about a phenomenon of sham income and real expenditure in finance and sham deposits are real loans in the bank, making it impossible to strike a real balance.

Compared with the 10 years of internal disorder, our economic results have markedly increased over the past few years. From 1979-1981, the gross annual value of agricultural production increased by 26.1 billion yuan, about 60 percent of which was due to improvements in labor productivity. The proportion of agricultural production cost has dropped from 34.9 percent in 1978 to 31.4 percent in 1981. A number of advanced industrial enterprises have also achieved very good successes in improving economic results. Generally speaking, however, the present economic results are still very poor. In industrial enterprises with independent accounting under the ownership of the whole people, the revenue and profit derived from 100 yuan of capital (net value of fixed asset plus flowing capital quota) was 24.8 yuan in 1979 and 1980 and 23.8 yuan in 1981, a quarter less than the 31.9

yuan in the period of the First Five-Year Plan. In 1981, key national enterprises failed to attain the best historical level in 19 of the 46 quality indexes of major products. In 1981, key national enterprises failed to attain the best historical level in 54 of the 70 indexes for material consumption. Naturally, there are various causes for these problems and there are also incomparable factors in the past and present conditions. It can be affirmed, however, that there is a great potential to improve the economic results. Only those enterprises with good results have great vitality. The national economy can have a steady and stable speed only on the basis of good results.

In his opening speech at the 12th party congress, Comrade Deng Xiaoping said: "In carrying out our modernization program, we must proceed from the realities of China." How should we understand China's actual situation? We have various methods of achieving this aim, statistics being a very important one. If we do not have relatively complete statistics, it is impossible to understand the actual situation in a comprehensive way and it is also difficult to fulfill the fundamental requirement of building socialism with Chinese characteristics. Therefore, further strengthening statistics work is a major issue that has a strong bearing on whether or not we are able to proceed from the realities of China and build socialism with Chinese characteristics. Under the socialist system, it is entirely possible for our statistics to be more realistic and reliable than the capitalist ones. Under the influence of the "leftist" line, there were some fabrications in statistics in the past. However, this is not inherent in a socialist society. On the contrary, it is incompatible with the essence of a socialist system. Since the 3d Plenary Session of the 11th CPC Central Committee, this phenomenon has been constantly rectified. At present, most of our statistics are authentic and reliable. In the future, following a fundamental turn for the better in party work style and social mood, statistics work will be constantly improved and the superiority of statistics work under the socialist system will be further demonstrated.

Fang Weizhong [2075 4850 0022]: "Grand Objective, Reliable Measures"

There is still about 20 years between now and the end of the century. How shall we determine the objective of China's socialist modernization program and what steps shall we take in the next 20 years? This is a major issue which the whole party and people of the entire country are very much concerned with. It will not do to proceed without a plan. It will be difficult to realize an objective if we fix an excessively high objective. However, we shall be in a state of inertia if we fix an excessively low objective. Neither can arouse the initiative of the people. If we rush headlong into mass action without definite steps, it will also be difficult to realize an objective even if it has been fixed in an appropriate manner. An important achievement of the 12th party congress is that it has correctly solved this problem by determining a grand objective and providing reliable measures and thus won the enthusiastic support of the whole party and people of the entire country.

The 12th party congress called on us, while steadily working for more and better economic results, to quadruple the gross annual value of industrial and agricultural production by the end of this century. It is both necessary and possible to realize this objective and so it is an appropriate objective.

There are quite obvious reasons for the necessity to quadruple the gross annual value of industrial and agricultural production. Only by realizing this objective will it be possible for China to be placed in the front ranks of the countries of the world in terms of gross national income and output of major industrial and agricultural products. This will represent an important advance in the modernization of its entire national economy and the urban and rural population will be comparatively well-off both materially and culturally. This objective has reflected the strong aspirations of the people of the whole country. If we determine a lower speed, it will be impossible to meet the steadily growing needs of the people in their livelihood, nor will it be possible to meet the needs for strengthening the national economic and national strength.

It is possible to realize the objective of quadrupling the gross annual value of industrial and agricultural production for it is not a high and unattainable objective. Generally speaking, by fulfilling the following three demands it will be possible to attain the objective of quadrupling the gross annual value of industrial and agricultural production.

1. It is necessary to double, in 20 years, the output of industrial energy and primary raw materials (an average annual increase of 3.5 percent).

2. It is necessary to improve technology and product quality, lower energy and raw material consumption and improve the complexity and precision of processing so that we can create 100 percent more value or double the economic results with the same amount of energy and raw material.

3. It is necessary to develop some newly emerging industrial departments such as electronics, nuclear energy, data, petrochemical industry and new type materials. They can increase output and improve the economic results.

In other words, the realization of the objective of quadrupling the gross annual value of industrial and agricultural production in the next 20 years depends partly on the growth of production capability and partly on the progress of technology. The growth of production capability should also depend on the application of new technology. We should not rely entirely on old technology. The technological level of China's existing industry is roughly equal to the level of the economically developed countries during the late 1950's and early 1960's. It is possible for us to attain, by the end of this century, the level of the economically developed countries of the early 1980's, namely, to attain the level they have attained in the past 20 years. If we do our work well, it is also possible to surpass it. This is not only because we can absorb the existing technology but also because the existing technology will also develop in the next 20 years and we can make use of it. We should actively introduce new technology into our country, strive to tackle key problems in new technology and, after we succeed in doing so, effectively popularize and apply it. We can thus greatly change the outlook of our production and greatly speed up the growth rate.

Therefore, quadrupling the gross annual value of industrial and agricultural production is by no means a simple concept of output value but the unity between speed and results and the unity between production and construction on the one hand and scientific and technological achievements on the other hand.

In order to realize the strategic objective of quadrupling the gross annual value of industrial and agricultural production in the next two decades, the CPC Central Committee has decided to take the following two steps: In the first decade, aim mainly at laying a solid foundation, accumulating strength and creating the necessary conditions; and in the second, usher in a new period of vigorous economic development. This is an extremely important policy decision.

It is necessary to take two steps because the problems accumulated over a long period of time in the past have not been completely solved. They are chiefly manifested in the disproportion of the national economy and the irrational industrial and organizational structures. Reforms of the economic system have just started, there has not been a fundamental turn for the better in our financial and economic situation and there is still a lot of work to be done in the way of readjustment, reorganization and reform. At the same time, we should also get prepared in our material conditions such as energy and communications, in tackling key problems in science and technology and in training competent persons. That is to say, we are still not provided with the necessary conditions for a big development in the first decade. If we do not take two steps, people will request doing at the present moment a lot of things which we are not provided with the necessary conditions to do now. They will request the expansion of the scale of present construction. This will aggravate our present financial and economic difficulties and the shortage of energy and communications facilities. The result is that we shall not be able to ensure a steady development of the economy but will probably bring about new disproportions in the national economy and delay the approach of a new period of vigorous economic development. Conversely, by dividing the attainment of our objective in two stages and two steps, we shall be able to concentrate our chief efforts in the first decade on readjusting the various aspects of economic structures, restructuring, reorganizing and combining the existing enterprises and gradually conducting reforms of the economic management system. At the same time, we shall also be able to effect in a planned way technological transformation of the existing enterprises, strengthen the construction of key projects such as energy and communications and step up the scientific and technological study and the cultivation of competent persons. We shall thus lay a relatively solid foundation for economic growth in the second decade. Then, a new period of vigorous economic development in the 1990's will be a logical event. By doing so, we shall neither be impatient for success nor mark time but do solid work.

We shall follow in proper sequence and make gradual progress. This is in fact a fast but not a slow speed. In making such arrangements, the CPC Central Committee has integrated a high degree of revolutionary spirit with a strict scientific approach and has reflected the fundamental principle of proceeding from realities in everything. Therefore, it provides the people with both strength and confidence. Provided that we act unswervingly according to the arrangements of the 12th party congress, we shall be able to avoid setbacks in our economic development and steadily arrive at our destination.

Tao Dayong [7118 1129 6978]: "Make Sure To Regard Education and Science as Strategic Emphases"

It was pointed out in the report to the 12th party congress that in the next two decades, it is necessary to pay close attention to the strategic emphases of agriculture, energy and transport and of education and science. This is a correct policy decision made in line with our national conditions, strategic objective and various practical proportions. It is an objective requirement of the law of socialist economic development.

Science and technology are a key to, and education is a basis for, realizing the four modernizations. The development of the other emphases, namely, agriculture and energy and transport, is also inseparable from science and technology. Constant inventions in science and technology have brought about a profound revolution in production, transforming science into direct productive forces. The fact that the CPC Central Committee has made, on this occasion, science and education strategic emphases has reflected the attention the party attaches to, and the concern the party shows for, intellectuals. It has also presaged an upsurge in scientific and cultural undertakings. Having worked for a long time in an institute of higher learning, I profoundly realize that the exploitation of "intellectual resources" in our country still lags far behind the actual needs in economic construction. Since liberation, the institutes of higher learning throughout the country have trained a large number of competent personnel in various specific fields. However, in order to attain the strategic objective of quadrupling the gross annual value of industrial and agricultural products, this contingent seems to be too small, or else is not commensurate with our task. Moreover, we have not been able, so far, to bring into full play the people's talents. Since the 3d Plenary Session of the 11th CPC Central Committee, we have achieved a great historical transformation by summing up the historical experience, both positive and negative, and bringing order out of chaos. However, in the fields of science and education, there is still a lot of work to be done and it is necessary for us to create a new situation. After the smashing of the "gang of four," through the solicitude of the party, marked changes have taken place in the mental outlook of intellectuals. They are imbued with the vigor of devoting themselves to the four modernizations. Generally speaking, in order to bring into better play the initiative of the intellectuals, it is still necessary to implement the policy toward the intellectuals. The "resolution" of the 3d Plenary Session of the 11th CPC Central Committee pointed out that it is necessary to "unequivocally affirm that, together with the workers and peasants, the intellectuals are a force to rely on in the cause of socialism." The numerous intellectuals are filled with exultation at this. If, in the future, this content can be incorporated into the new constitution, it will further stimulate their creativity and their sense of being masters of the country, which will be transformed into a powerful material force for the four modernizations drive.

Looking at the actual situation in the educational, cultural, scientific and technological fields, a pressing matter at the moment is to improve the living and working conditions of middle-aged intellectuals, and in particular to raise their pay. The middle-aged intellectuals trained after liberation not only constitute the backbone force on the current educational, cultural, scientific and technological fronts, they also shoulder the heavy responsibility of inheriting the past and ushering in the future. Most of them have a heavy workload and household chores and their pay tends to be low. Undernourished, quite a few of them become old before their time. In recent years, some have even died prematurely. This abnormal phenomenon should draw the close attention of the departments concerned. Meanwhile, as for the new students enrolled at colleges and universities in recent years, their quality (particularly their Chinese language standard) is unsatisfactory. This has something to do with the standard of teaching in middle and primary schools. In order to change this state of affairs, in addition to improving teaching materials and methods, opening all avenues for study, improving the examination system and strengthening leadership, it is all the more necessary to definitely improve the conditions for running a school and reorganize the ranks of teachers in order to prevent the outflow of competent persons. "Indigo blue is extracted from the indigo plant but is bluer than the plant it comes from." At present, although the pay of primary school teachers has been raised to some extent, their well-being and political treatment are relatively poor. Ordinary university graduates are not content to become middle school teachers, nor are middle school graduates willing to work as primary school teachers. The teachers in schools run by the local people are still required to farm the lot of land allocated to them. It is, therefore, not an easy thing to raise the scientific and cultural level of the whole nation. "Fish are extremely happy in deep waters and birds know how to return to the deep forests." In my opinion, if we want to fundamentally alter this state of affairs, it is necessary to greatly and promptly increase "intellectual investment" and raise the proportion of educational spending in the annual budget of the state. Only in this way can we "vigorously universalize primary education, strengthen secondary vocational education and higher education and develop educational projects of all types and at all levels in both urban and rural areas, including training classes for cadres, workers, staff members and peasants, and literacy classes," genuinely raise education and science to the status of strategic areas and train a large number of qualified personnel in specific fields in our efforts to create a new situation in the socialist modernization program. "It takes 10 years to grow trees, but 100 to rear people." Only by grasping every second will we be able to adapt ourselves to the urgent requirements of the new period.

Xu Dixin [6079 3321 2450]: "Strive To Realize the Great Strategic Objective"

The need to achieve the grand strategic objective set forth by the 12th party congress is clear to all. We have the objective conditions to realize this aim, that is, the superiority of the socialist system; after more than three decades of hard work, our national economy, and particularly the state economy under the ownership of the whole people, already possesses a certain material and technological basis; the strategic emphases and measures for the realization of this strategic objective have been arranged in a rational and appropriate manner; the realization of socialist modernization and the continuous improvement of the people's livelihood based on the development of the national economy has become the unanimous aspiration of the nation; the political situation characterized by unity and stability will continue to play a role beneficial to economic construction.

However, it is certainly not an easy job to quadruple the gross annual value of industrial and agricultural production in two decades. We should oppose not only fear of difficulties but also casual and blind optimism. A clear and sober understanding of the existing difficulties is beneficial and essential to the realization of this strategic objective.

What are the difficulties facing us today? Agricultural labor productivity is relatively low and our capacity to resist natural disasters is still very small; production technology, management and administration in a large number of enterprises are quite backward and due importance has not been extensively attached to economic results; the study of applied and basic science has not been adapted to the needs of the development of the national economy; we have not succeeded in effecting a fundamental turn for the better in the financial and economic situation; and population growth has not been brought under complete control on a national scale. Besides these, there are also other difficulties. Only by overcoming these difficulties will it be possible to forge ahead healthily toward the great strategic objective.

In order to promote an overall upsurge in the socialist economy, Comrade Hu Yaobang, in his report, has set forth correct principles on various issues, such as amassing funds on key projects and continuously improving the people's livelihood, adhering to the dominant position of the state economy and developing diversified economic forms, correctly implementing the principle of relying mainly on the planned economy and supplementing it with regulation by market mechanism, adhering to self-reliance and expanding economic and technological exchange with foreign countries. Implementation of these principles is essential to the realization of our strategic objective.

The integration of the concentration of funds on key projects with the continuous improvement of the people's livelihood is a specific manifestation of the superiority of the socialist system. In order to effectively amass funds for key projects, in addition to readjusting, on the basis of "taking the whole country into account," the ratio of distribution of central and local revenue and the ratio of profit retention by enterprises, it is also necessary to attain a fundamental turn for the better in the financial and economic situation in the next few years. This makes it necessary, on the basis of improving economic results, to gradually increase state revenue, reduce financial deficits and continue to maintain a basic stability of price.

China now has more than 1 billion people. The total figure of the newly increased population is more than 10 million a year. This is a considerable pressure. Excessive growth of population has an adverse effect on per capita income. It also poses serious problems regarding the supply of grain and housing, and meeting the need for education and employment. It may even affect social stability. Therefore, Comrade Hu Yaobang pointed out: "Family planning is a basic policy of our state."

Correct implementation of the principle of relying mainly on the planned economy and supplementing it with regulation by market mechanism constitutes a fundamental issue in the reform of the economic system. It plays an extremely important role in promoting the all-round development of the socialist economy and in realizing our strategic objective. China's planned economy is based on public ownership of the means of production. With respect to production and distribution of the means of production and the means of subsistence in the state economy, which have a strong bearing on the national economy and the people's livelihood, and particularly the key enterprises that have a strong bearing on the economic situation as a whole, it is necessary to practice mandatory planning. Mandatory planning is an important manifestation of China's socialist ownership by the whole people in organizing and managing production. We should not merely regard mandatory planning as an administrative means. Like guidance planning, it is not the outcome of unrealistic theories. It has been created by proceeding from realities and by conscientiously applying the law of value in accordance with changes in market supplies and demands, and proportional relationships between various production departments. Compared with guidance planning, it plays a dominant role in the planned economy. Some comrades have overemphasized the flexibility of guidance planning and underestimated the positive role of mandatory planning. This matter merits our attention.

With respect to various kinds of small commodities, they are low in value and diversified in color and design, and should generally be supplied on time and in certain areas. It is unnecessary and impossible for the state to subject them to planning. The state should let enterprises adapt their own production to changes in market supplies and demands. Some comrades are afraid that the existence of regulation by market mechanism and the individual economy will adversely affect the planned economy. In my opinion, so long as we do a good job of the planned economy and promptly strengthen industrial and commercial administration and management through policies, laws and regulations, it is impossible for them to shake the planned economy.

Did we not do a remarkable job in our planned economic construction in the period of the First Five-Year Plan despite the existence of the small commodity economy and the capitalist economy? Did we not overfulfill the original plan?

CSO: 4004/5

IMBUE THE WORKING CLASS WITH COMMUNIST IDEAS AGAIN

Beijing RED FLAG in Chinese No 19, 1 Oct 82 pp 35-40

[Article by Yu Yannan [2456 3601 0589]]

[Text] The basic premise and foundation for the strengthening of the development of the working class' ideology is a deep understanding and examination of the present ideological reality of the workers. In China today, the ideology of the working class is in general very good. There is a large number of people with an advanced ideology and thinking and this large section of the population is emerging from the ranks of the workers heroically struggling to work for the socialist modernization program. They are the proof of the existence of such advanced thinking. Nevertheless, there do still exist several problems which demand prompt resolution.

A vast amount of investigative material illustrates very clearly that within the working class there exists a certain proportion of people with a relatively low level of ideology and there are even those who do not realize that the realization of communism is their highest ideal. Within one factory which launched discussions on outlooks on life, there were some people from one workshop who even said that "man's nature is self-centered." The ensuing discussions even produced a small number of people who agreed with this opinion. That is to say, they did not feel that such an opinion is wrong and that such an attitude had long ago been criticized by Marxism as an errant bourgeois concept. Misinterpretation of "self-centeredness" is a social phenomenon which only occurs with the appearance of private ownership in a society and is characteristic of the exploiting classes and the petty bourgeoisie and is in no way inherent in the essential character of human beings. Workers from another factory, in pursuit of so-called "material benefits," felt that "money is the only really dependable thing and that everything else is empty." To put money on a higher plane than everything else, to consider it even more important than political honor or credit, even more valuable than such things, results in occurrences such as the following: Some workers who contravene labor discipline prefer to write self-criticisms than suffer pay deductions. This in fact means that one considers one's own honor and dignity to be something rated in terms of, and exchanged for, money.

Of course, in terms of the work force of the entire country, the above phenomena are confined to only a very small percentage of workers and by no means represents the general ideology of China's working class. Nevertheless, the appearance of such attitudes requires our most serious attention and vigilance. For it illustrates the serious extent of the encroachment of bourgeois and nonproletarian thinking into the ranks of the working class. Under the influence of such thinking, some workers' ideological, political and other qualities have dropped significantly, leaving them with a distinct lack of ideology and a lack of political enthusiasm. One might even say that some people have forgotten the great historical mission borne on the shoulders of the working classes, and even consciously or unconsciously use the morals and values of the bourgeoisie to govern their own thoughts and actions and evaluate and handle their relationships with other people within the socialist conditions of our society. Furthermore, there are those who have been witness to the fact that among those workers who have been severely corrupted by bourgeois thinking, there has also been moral degeneration leading to the occurrence of economic and various other crimes, creating great unrest within the socialist cause. Such infiltration and corruption by bourgeois and other nonproletarian ways of thinking on the minds of the workers class is one of the disastrous results of the 10 years of internal disorder in China. The reactionary moves and actions of the Lin Biao and Jiang Qing counterrevolutionary cliques totally destroyed the standards between positive and negative, good and evil and beauty and ugliness as well as ruining the ideology and thinking of the people. Their intense propagation of extreme individualism poisoned the mental outlook of some people and the aftereffects and pernicious influences of such poisoning have yet to be completely eradicated. Recently, for a multitude of reasons, we have been slack and rather weak in our attitude toward the ideological education of the working masses and ideological and political work. This has also brought about a return to a certain amount of individualism and selfishness, none of which can be ignored. The historical and present influence of bourgeois and other nonproletarian ways of thinking both in China and from abroad cannot be wiped out in a short period of time, thus the struggle to counteract the corruption of such thinking must be carried out over a long period of time. Thus an important task is presented to party departments of every level, to labor committees and organizations of every type as well as to ideological and political workers and theorists, namely, to always make sure, during this new historical period of building socialist modernization, that political and ideological work is constantly strengthened, communist education improved and that workers (in fact all people) are once again imbued with communist and socialist ideas. We should adopt all feasible measures to ensure support for the effective realization of this work and we should not cease to try and improve the quality of the working masses' ideology, politics and morality while helping them to fight and overcome the power of the influences of bourgeois and other nonproletarian ways of thinking. Only in this way can we help preserve the true class qualities of China's working class, help preserve the purity of its ideological consciousness and make more and more members of society shake off old ways of thinking and the fetters of this old consciousness and accept the ideological consciousness of the working class and from this point consolidate and develop the government position and guiding role of the working class' ideological consciousness within the domain of China's socialist consciousness.

At the same time we must recognize that within the sphere of China's socioeconomic life, we are carrying out a planned economy with market regulation playing an auxiliary role. However, the level of development of China's social production forces requires us to apply ourselves fully to the development of socialist commodity production and commodity exchange starting from now for a relatively long period of time. Under such conditions, the question arises as to how it is possible to develop commodity production and commodity exchange while at the same time awakening the masses to recognition of the limitations of the principles of free commodity exchange and exchange at equal value, destroying the narrow field of vision created by this, and yet also preventing it from overstepping the domain of economic activities and encroaching on the domain of social life; thus, for example, preventing it from encroaching on the domain of mental life or the domain of the relations between ethics and morality or encroaching on common beliefs, ideals, individual and national character and other such sacred domains. This problem indeed throws up some grim and penetrating questions, but before an effective solution can be reached the working classes and the people in general must undergo a strengthening of their communist education so that the level of their ideals and ideological and political consciousness is raised.

The working class is the most advanced class in China and as such possesses characteristics of its advancement which other classes do not have. The reason for this is because it possesses the ideological weaponry of scientific communism (or scientific socialism, the meaning is the same) as well as the fact that it is closely connected to the interrelations of the present-day productive forces and production relations and is in fact the representative of these new productive forces and production relations. But the working class cannot spontaneously generate scientific communist thinking. It must be educated and imbued with such, before it may possess such an ideology and before it may come to understand its own historical position and historical mission, to be the strongest and most advanced social force for the promotion of a beautiful and glorious future. This basic principle of Marxism, even today is still just as applicable as before and is not only fitting for the historical period of the struggle of the working class to attain political power but is also fitting for today's historical period of socialist construction and the eventual realization of communism in the future. In the final analysis the carrying out of communist education for the working class and their imbibement of communist ideology involves making the working class clearly recognize its own basic potential and its actual situation and from this point allow a conscious realization of this potential in order to carry out and support the unremitting struggle. In terms of historical materialism, the social actions of human beings are always the product of certain demands for interest. The ways in which such demands manifest themselves are numerous, such as individual interest, class interest and social interest as well as partial interests and all-round interests, short-term interests and long-term interests. The way in which people perceive these interests are also numerous. In general people always tend to perceive first of all their own personal immediate interests, for such interests can be perceived through the senses in daily life, while long-term and all-round interests are not perceived or appreciated in the same way, and hence are not seen through the senses of everyday life. In order to appreciate such interests one must do some theoretical thinking and one must formulate scientific abstractions and theoretical generalizations from the individual to the general and from the concrete subject to the essential nature of a situation. The ideological system of scientific communism makes up the ideological system of the working class and clarifies the fundamental principles developed in society as well as the conditions for the working class to liberate themselves and the entire masses and expresses the most profound and fundamental of the working class' and laboring masses' interests. Of course such an ideological system cannot be created by the daily perceptions of the working people, but can only be established and developed through the intense study, by Marxist theorists and working class political parties, of the ideological and cultural results already achieved in the history of mankind, the study of the working class' class position and the study of the practical experiences of the workers' movement as well as extensive theoretical work and theoretical generalizations. Before the appearance of Marxism and theoretical communism the working class had already long existed as an objective class of society and indeed had already started its mass struggle to fight against capitalist exploitation. However, this struggle was carried out without the working masses' appreciation of the essential interests and good of its own class, and its motive force was only immediate short-term direct interests. Moreover, the contents of the struggle were predominantly economic and had not yet unified to overturn the entire capitalist ideological system and system of exploitation and for this reason was still stuck in a stage of spontaneity. Only by imbuing the working masses with scientific communism and uniting the worker movement can the working class gradually come to understand its own essential interests and thereafter cause the historical change from being a class-in-itself to a class-for-itself and thus the workers movement will have an awareness and be able to mold itself into a true communist movement. Such a fact of history amply clarifies the urgent importance and great significance of communist ideological education in the development of the working class and other revolutionary causes. Today we should continue our support for educating and imbuing the working people with communism and communist ideas as well as its significance and aims, which are to ensure that the working masses, under a new set of historical conditions, may continue to understand and bear in mind the essential interests of their own class and mankind in general and so that they may also be able to broaden their field of vision from individual, family or enterprise interests to recognize completely and understand the interests of the development of the entire socialist society. In this way they may accurately combine individual and social interests and thereby consciously serve the developed demands of social interests. At the same time they should actively try to influence and win over the broad spectrum of the masses in order to jointly develop the socialist cause and to arduously struggle and ceaselessly strive to bring our society nearer to our glorious aim of communism.

In order to ensure the effective realization of communist education, one must first improve the contents of such an educational program. It should be similar to the cultural education system in China given to the public from primary through secondary school to university with unified contents and a sequential order combined with composite planning. Thus the communist education provided by the party for the working class and other members of society must be based on summarized practical experience to gradually build up its own complete system. From the moment a worker enters a factory to the day he or she retires, he or she should, at various times, relate their actual thinking to gradually create a systematic education of ideology. We feel that this system of communist education should, in terms of content, include the following basic facets: 1) Education in communist ideology. The ideal of revolution is a form of advanced social consciousness and a scientific belief, and is the spiritual force urging the people to build an objective world and society to develop. We must firmly establish the lofty ideals of communism in the working masses, especially in the young workers. And not only must we thoroughly educate them in the basic theories of Marxism, we must also educate them thoroughly in revolutionary history as well as socialism, patriotism and internationalism. After completing such a program of education, they will be able to grasp the basic tenets of Marxist principles of social development and come to understand how the continuous, advanced dialectical methodology of the communist movement with its mutual promotion and mutual integration of international and national conditions is able to carry on the history and thence glorious tradition developed by China's and the international communist movement. Thereafter they may take those ideals fought for on behalf of the socialist and communist cause, to become the solid theoretical and practical base for the creation of a firm and rock-steady conviction based on their own thinking. Thereafter they may closely tie up this conviction with their own aspirations and actual work and life and therefore stimulate themselves to turn and face the bright future and then march forward courageously to struggle, create and construct. 2) Education in communist labor attitude. In a socialist society, because of the restrictions on the level of development of the productive forces, labor is still a means of life. The principle of distribution according to work should be applied for the distribution of consumer products and we must recognize the principle of laborers being concerned about the socialist material benefits of the fruits of their own labors on the basis of individual material benefits. Nevertheless, we must teach the workers and other laborers to establish a communist labor attitude and encourage them to work without consideration of remuneration and to concern themselves with the collective fruits of their labors on the basis of social benefits, to serve the people heart and soul and to serve the fulfillment of the material and cultural demands of the entire population. Naturally it is not possible during the socialist stage, for communist labor with disregard for remuneration to occupy an authoritative position within the entire sphere of social activities, but such communist aims should and indeed can be increased and developed. The spheres of work and advanced people who continue to appear from within the work force and the laboring masses are the true embodiment of communist labor. We must adeptly put to use their achievements and experiences in order to educate the workers. Some people still do not understand why, if we are still in the socialist stage of development, we should carry out communist education, establish a communist morality and advocate a communist labor attitude. Socialism is the first stage of communism, thus without actively developing communist aims and ideals there can be no improvement and development in the socialist system. Hence, in terms of distribution, it is necessary to support the principle of distribution according to labor while at the same time actively promoting a communist labor attitude before the development of our society's labor and economic life attains an all-round, solid motive force. 3) Education in communist morality. Lenin said: "The basis of communist morality is the struggle to consolidate and complete the communist task." ("Selected Works of Lenin," Vol 4, p 355) The main task and substance of educating the working masses and other members of society in communist morality is to train them to become loyal to the cause of socialism and communism. Furthermore, in order to achieve a positive attitude toward work and life, we must help them develop a consciousness toward work responsibility and thereby make them come to clearly understand that there is no difference between individual and social interests within the new society and that true happiness and social value for each member of society illustrate itself in one's struggle to succeed in striving toward the aim of communism. Thus, consciously performing one's social tasks, consciously abiding by the laws of society and the basic principles of everyday life, consciously protecting and promoting the new interrelations between workers in terms of unity, assistance, love and cooperation, and consciously destroying all phenomena which go against the interests of society are the lines along which the struggle must continue. The country and the society will come to evaluate each individual's moral standards based on his or her working and social activities and general behavior and the extent to which these factors contribute to the victory of the socialist and communist cause. In the process of carrying out the teaching of communist morality, we should at the same time introduce legal education. Moral education creates the necessary premises for respect for legal authority and legal education can help establish the principles of communist morality within the course of everyday life. 4) Education in appreciating the beauty of communism. This is an indispensable part of communist education and in fact turns up in every aspect of such education and is an important factor in improving the effectiveness of the education in ideals, labor attitude and morality. The most important task in educating workers and members of society to understand the beauty of communism is to foster and strengthen their ability to appreciate such beauty, to encourage them to love and pursue those things in life of a revolutionary, advanced, healthy and beautiful nature and to foster abhorrence, resistance and struggle against all corrupting and awful things which oppose socialism. They should be helped to establish the basic distinction between their own view on the appreciation of beauty and that of the bourgeoisie and other exploitative classes and to take human, ideal, moral and social activities of a communist nature as the basic premise for an advanced view of beauty as well as a standard for viewing such beauty. From such premises the masses may then use such views of beauty and such standards, as well as the generalizations of beauty reflected by such standards, to organize their own material and spiritual lives, and thereby constantly improve the style and direction of their lives. Both historical and present-day experience illustrates that the nearer a person comes to attaining a communist appreciation of beauty, the more he or she is able to penetrate deeper into the beauty of the world and in this way his or her thinking and behavior will reach higher standards and greater purity and hence the more he or she will consciously be able to contribute to the great tasks for attaining the ideals of communism. Here, then, we have made a brief summary of the significance and most important tasks involved in carrying out communist education. The more concrete problems of what the specific content of such education should be, what should be learned first, how each separate subject should be thoroughly learned, what concrete requirements should be aimed at after the learning experience and how such education should be tested, all such problems require the strength of every level of the party administration and of the workers' organizations and committees to work out a comprehensive plan by summarizing practical experience and carrying out scientific study so that an outline for the educational material may be established. With this educational outline every region, every business and every enterprise can formulate more concrete and specific plans based on their own characteristics. In general, then, this education must gradually be standardized and systematized.

In order that communist education sees fruition, changes and improvements must be made in the shape and methodology of ideological and political education within enterprises. The core of communist education is to seek and probe for the truth and spread the truth. Since truth is scientific it follows that the style and methodology of probing for it and spreading it must also be scientific and must conform with the inner nature of truth. In other words this style and methodology must persuade and inspire the masses to seek the enormous strength to be found in an awareness of the truth. Marx said: "Not only should the results of probing conform with the truth, but the ways through which such results are achieved must also conform with the truth." ("Complete Works of Marx and Engels," Vol 1, p 8) In addition Lenin also said: "We cannot endorse the use of a stick to get people into heaven." ("Collected Works of Lenin," Vol 20, pp 58-59) These quotations clearly point out the necessity for adopting scientific methodology in our search for and spreading of the truth. In the process of carrying out communist education of the masses, we must also take a good look at the glorious tradition and methodology that our party has inherited and accumulated over many years in terms of ideological and political work and improve those areas which are no longer suitable for today's world and thereby create new methodology and styles of a lively nature which will be easier for the masses to accept. At present, the most important target for communist education in enterprise is the young people. On the basis of young people's ability to think independently, their thirst for knowledge and their wideranging interest and love for things, we must strengthen the direction of educational work as well as its liveliness and knowledge content. We must support the adoption of guiding and inspirational teaching methods and aim for positive education with a sequential and lively style to it. At the same time we must bring together ideological and political education with rich and varied spare-time cultural activities. Watching films, television and reading literary and scientific books all comprise an important part of the workers', in particular young workers', spare-time activities. We should examine this area very carefully and ensure the highest quality of radio, television and films as well as newspapers and books read by workers, thereby making them an important channel for the dissemination of communist thinking and ideas and acting as increasingly rich spiritual nourishment for the workers.

Some people only partially understand the need to make ideological and political work serve the needs of economic work and in so thinking they make the contents of ideological education within enterprises extremely narrow, restricted only to ensuring work attendance, safe production and the completion of production plans. Such an attitude means that the comprehensiveness of communist education is ignored as is the importance of improving educational methods and styles. Such a situation demands immediate rectification. Correct and effective communist education is the best means of improving the workers' political and ideological consciousness, the best means of ensuring a socialist quality and expansional direction to an enterprise and the best and most basic means of expanding enterprise production and raising productivity. These few points must have our full attention.

Some people feel that educating workers with communism at present will not meet with success. This is not true. Many regions and enterprises which have already started educating their young workers with communist ideas have now established a series of good styles and teaching methods, while at the same time amassing successful experiences. An example might be the Yangzhou Cotton Mill in Jiangsu Province mentioned in the piece entitled "Correct Appraisal of the New Era of China's Working Class." The factory set up a political school in which, with the help of guiding and correct educational methods and successful integration with the realities of the workers' actual thinking, they carried out education in the four basic principles of the party as well as the historical mission of the working class and obtained results which satisfied everyone. The school ran classes for 10 weeks, with attendance from a total of 491 people, with over 90 percent of those attending taking time off work to study. There were varying degrees of improvement in many aspects such as ideological and political consciousness, labor attitude, labor discipline, moral standing and work responsibility. Families of those attending the school sent silk banners congratulating the school on its successful teaching methods. The success and outstanding achievements obtained by this political school cannot be separated from the unceasing energy and work of those ideological and political workers active in the factory who managed to organize the school. At the same time as improving the training of ideological and political workers we must also select a series of workers who show keen interest in their political and ideological work, display revolutionary spirit, possess cultural and scientific knowledge and high standards of Marxist-Leninist theory and who have close contact with the working masses and take these people and train them thoroughly to undertake similar tasks elsewhere so that we may build up a great team of ideological and political as well as communist education workers. We must realize that when the working class has undergone a long period of training in communist activities they will possess the tradition of learning communist theory. The brightest and most intelligent of our ideological and political workers must constantly amass and summarize their experiences so that they may construct new methods and styles of educating the working masses in ideology. An upsurge in communist education centered on the scientific theories of Marxism-Leninism-**Mao Zedong** Thought will, in line with the incessantly developing direction of China's political and economic situation, without doubt flourish in China.

At the same time as educating the working class in communist ideas, we must ensure that the working class also receives cultural and scientific education. Such education not only raises the workers' production capacity and the vital need for them to grasp the complexities of modern equipment, it also helps them grasp the theory of communism. Both Lenin and Mao Zedong pointed out the importance of this problem many times. Just as one cannot come to understand the complexities of modern machinery without scientific and cultural knowledge, so too, without a certain level of culture, one cannot come to understand relatively complicated ideological, political and theoretical problems. Our work in ideological and political education can only reach a relatively low level, thus we must raise the level of cultural, scientific and technological education above that of ideological and political education. During this period of economic readjustment and enterprise consolidation it is vital and feasible to carry out training and education for all workers which will include both ideological and political as well as cultural and scientific content.

The Communist Party of China may be seen as the vanguard of the working class and as the political party of communism and its amassed work and activities embody the realities of China's communist movement and the ideology of communism. In terms of national and social life, the Communist Party of China plays a guiding role for ideology and politics. Education in communist ideology for the masses, in particular the working masses, is therefore, an important and frequently recurring task of party members at all levels including enterprise party members. An important aspect of this task is the strengthening and improvement of ideological and political educational work by party leaders involved in strengthening and improving the party itself. Furthermore, the very center of socialist spiritual and cultural construction may be seen as the carrying out of communist ideological education for the masses, in particular the working masses. Only if we recognize the position and role of communist education within party activities and within spiritual civilization construction in general, can we definitely carry out and complete this work and make our working classes and other adult members of society into a new breed of person more and more imbued with the ideals, morality, culture and discipline to devote themselves to the communist cause.

HOW TO STUDY THE SECOND PART OF THE REPORT TO THE 12TH CPC NATIONAL CONGRESS

Beijing RED FLAG in Chinese No 19, 1 Oct 82 pp 41-45

[Article by RED FLAG Editorial Office for Theoretical Education; passages within slantlines published in boldface]

[Text] On the basis of summing up the experience and lessons of China's economic construction and analyzing China's national situation, this section deals with the economic program for socialist modernization, and discusses the following main issues: one strategic goal, two strategic periods, three strategic focal points and four main principles concerning the task of China's economic construction between 1981 and the end of the century. These four issues have their own points of emphasis, but are interrelated and together form a complete and clear blueprint for socialist economic construction.

Through our study, we can divide the above four issues into four main points, come to a deep understanding of their meaning and put forward the objective bases for their proposal, clarify the relations between them and master the basic contents of this construction program as a whole.

/In studying the strategic goal, we must have a clear understanding of the following: 1) the concrete meaning of the strategic aim of China's economic construction from the year 1981 to the end of this century; 2) the great significance of realizing this strategic aim; 3) the real possibility and objective basis of realizing this strategic aim./

The report points out: "In the 20 years from the year 1981 to the end of this century, the general aim of our country's economic construction is to strive to quadruple the total annual industrial and agricultural output value of the whole country by constantly raising economic results; that is, to increase the output from 710 billion yuan in the year 1980 to 2.8 trillion yuan in the year 2000." The quadrupling referred to here means that the total yearly industrial and agricultural output value of our country by the end of this century will be four times as much as that in the year 1980 (calculated according to the fixed prices in 1980). In other words, this will be the achievement of two twofold increases. These various ways of expression mean one and the same thing. In addition, the quadrupling refers to the industrial and agricultural total output value. With regard to the output or output value of each product, the increase will not necessarily be 400 percent. It may be higher or lower than that. What merits particular attention is that the fourfold increase must be realized "by constantly raising economic results." In other words, the increase of output value must not be inflated or exaggerated. It must be real and be obtained through constantly tapping potential, reducing consumption, raising quality and broadening and deepening production.

To quadruple the total yearly industrial and agricultural output value in 20 years is an impressive aim. It presages a glorious future for our country's socialist construction and for our people. If we manage to achieve this strategic aim, our total national income and the output of our main industrial and agricultural products will occupy a leading position in the world, the income of the people in the cities and the countryside will double and their material and cultural life will reach a comfortable standard. We must not belittle "the quadrupling of the total yearly industrial and agricultural output value." Whether we look at it from the angle of our country's present economic status, or compare it with the speed of economic growth of other countries, we can be proud of this aim. According to general statistics of Western countries, China's gross national product in 1980 was about 1/9 of that of the United States, a little less than 1/4 of that of the Soviet Union, 1/4 of that of Japan and a little more than 1/3 of that of West Germany. Increasing it by four times means that our country's gross national product will be close to that of Japan in 1980, which then ranked third in the world, and will far exceed that of West Germany, which ranked fourth in the world. Of course, because China has a large population, the level of per capita national income will still be low. Moreover, by the end of this century, other countries will also have progressed. However, because the average growth rate of China's industry and agriculture is higher than that of economically developed countries, the gap between China and these countries will certainly be narrowed. We must not belittle the "comfortable standard of living." The "comfortable standard of living" means a common medium level of material and cultural prosperity. Having achieved this, although our living standard will not be high in comparison with that of economically developed countries, we must understand the following: First, the "comfort" we are referring to will be comfort enjoyed by the entire population. It will not be like that of capitalist countries, where the greater part of the high national income goes into the pockets of a few capitalists. Second, the "comfort" we are referring to is real comfort, bringing substantial benefits to the people. It is different from that of capitalist countries, where because of heavy taxes, inflation and rising unemployment, a significant amount of the laborers' income is stripped from them. Third, the "comfort" we are referring to is comfort that will enable the whole people to live happily. It is different from that of capitalist countries, where the working people are often worried by unemployment, robberies and murders, and cannot live in peace. In our study, we must be good at combining theory with practice, make scientific comparisons and come to a deep understanding of the great significance of achieving the strategic aim.

The strategic aim determined by the party Central Committee is formidable but also realistic, and can be achieved through hard work. Some comrades are not confident enough of this because they have not yet got rid of the negative influence of past economic setbacks, and because they have not fully understood the favorable conditions for realizing the strategic aim. We should realize that since the third plenary session of the party, by bringing order out of chaos, we have corrected the past "left" erroneous tendency, correctly summed up experience and lessons and found a new road of the Chinese type for building socialism. In addition, after more than 30 years of construction, our country has built up certain material and technological foundations. We have a relatively complete industrial system with relatively complete branches, and distribution is becoming rationalized. The foundations of industrial, transportation and nonmaterial production departments are far better than before. Take industry for example. Its potential is great. At present, China's energy utilization ratio is about 30 percent on average, while that of advanced industrial countries is as high as 50 percent. The output value produced by each 10,000 tons of energy in our country is about 63 percent lower than that of the United States and 72 percent lower than that of Japan. The history of economic development in the past 30 years or so also shows that it is possible to achieve a fourfold increase. For instance, a fourfold increase in 20 years means an average yearly increase of 7.2 percent. What was the growth rate of our country's production in the past? Calculated according to fixed prices, the total industrial and agricultural output value in 1981 had increased by 850 percent over 1952. In other words, the industrial and agricultural total output value was over 9 times as much. The average yearly rate of increase of our country's total industrial and agricultural output value between 1953 and 1981 was 8.1 percent. In the 20 years from 1961 to 1980, China's economic construction was affected by the erroneous "left" tendency. It was especially undermined by the 10 years of internal disorder. Yet the average yearly increase rate of the total industrial and agricultural output value still reached 6.1 percent, although economic results at that time were not high. At present, China has unprecedentedly favorable conditions for its economic construction. It is perfectly possible to make the average yearly increase rate of the total industrial and agricultural output value exceed 6.1 percent and reach more than 7 percent in the coming 20 years. We must have full confidence in this.

/The second focal point is a key problem of strategy for China's economic construction in the coming 20 years. Why must we grasp strategic key points in realizing our strategic aim? What is the relationship between nonstrategic points and strategic key points? We must come to a good understanding of these questions in our study./

The various departments involved in economic and social development form an organic whole. Because the positions and status of the various departments are different, in the process of economic development, some of them will become key departments and some will not, and they must be tackled in order of priority and urgency. According to specific conditions and within a certain period of time, we must lay stress on the principal and weak departments that restrict economic development, and concentrate our efforts mainly on strengthening them. This is a practical, realistic and far-sighted strategy. Although China's agriculture, energy, communications, education and science have developed to a certain degree, they have for a long time lagged behind the development of the national economy as a whole, and have been weak links that restrict economic development. If we do not solve this problem, we will have great difficulty in realizing our strategic aim. Therefore, it is of far-reaching significance that the party Central Committee has decided that the above departments will be our strategic focal points in the coming 20 years.

Agriculture is the foundation of the national economy. The status of this foundation has a decisive bearing on the development of the national economy as a whole. Since the third plenary session of the party and the popularization of the production responsibility system, we have developed a diversified economy by paying close attention to grain production, and China's agricultural production has developed remarkably quickly. But we have not fundamentally changed the low level of our agriculture, labor productivity and commodity rate. Our conditions for agricultural production are bad, and our ability to take precautions against natural calamities is low. The grain provided by each agricultural laborer is sufficient to support only about three people, far lower than the level of economically developed countries. The marketable surplus of grain amounts to only 15 percent. Products from forestry, animal husbandry, sideline production and fishery have been in short supply for a long time. In particular, China has a large agricultural population and little cultivated land. The average area of cultivated land per person is only about 1/3 of the 4.9 mu world average. The contradiction between a large agricultural population and little cultivated land is becoming more and more marked. All this shows that China's agriculture, the foundation of the national economy, is still weak. Only by firmly stressing agriculture as a strategic focal point, can we lay a more solid foundation for the development of the national economy.

Energy and communications are two important branches of material production in the national economy. Energy provides fuel and power for the national economy, and communications are the veins of the national economy. Since liberation, China's energy production has developed greatly. But because the processing industry has developed even faster and the utilization of energy has been low, energy production has for a long time been a weak link restricting our economic development. According to preliminary calculations, due to the shortage of electricity and coal, 20-30 percent of equipment throughout the country cannot operate at full capacity. The further exploitation of energy resources has become an urgent task. This needs a lot of investment, and a long construction period. But as to economizing on energy, it is quite a different matter. So long as we adopt effective measures, we can achieve quick and remarkable results. If we raised the utilization ratio of our country's energy to that of present-day Japan, we would quadruple our energy output. Therefore, we must concentrate on the planned exploitation of energy resources and the economical use of energy to guarantee the fulfillment of the needs of the development of the national economy. Communications and transport are another weak link in the national economy. In the past 30-odd years, the volume of our country's railway cargo has increased 30 times, but the railway mileage open to traffic has increased by 130 percent only. There are more and more weak areas and sections, and the transport capacity of "bottleneck" areas and sections can carry only 50-70 percent of the railway transport volume. On the one hand, coal that has been produced cannot be transported by train. On the other hand, due to the shortage of coal, work on the industrial front cannot be carried out fully. The capacity of highway and waterway transportation is comparatively weak, the handling capacity of our ports is inadequate and the waiting time for unloading is too long. Because the "veins" of communications and transportation are insufficient, industrial and agricultural production and the livelihood of the people are seriously affected. Only when we make great efforts to grasp these weak links as focal points, can we really guarantee the realization of the strategic aim.

The modernization of science and technology is the key link of the four modernizations. Science and technology determine more and more directly not only the speed of our country's economic development, but also the level of economic results throughout the country. At present, the consumption level in our country's production is high, its economic results are poor and its equipment and products lag behind advanced world standards. The fundamental reasons are that the level of science and technology is low and management is backward. The fact that economic structure, the organizational structure of enterprises and the structure of products are irrational reflects to a large extent the low level of China's science and technology and of its management. On the whole, the technological level of our country's industrial production is only equal to that of developed industrialized countries in the late fifties and early sixties. It is 20 years behind the advanced scientific and technological level of the world today. There are not many engineering technicians in our country. The average educational level of the masses of workers and peasants is low. There are not many skilled workers nor skilled specialized management personnel. All this slows down the development of our country's economy. According to statistics, in developed industrialized countries, 60-80 percent of the development of industrial production is achieved through technological innovations. Science and technology must be applied and developed by those people who are relatively well educated. Obviously, it is difficult for China's economy to rank in the forefront of the world if we do not raise our cultural and educational levels and our scientific and technological standards.

Laying proper emphasis on the strategic focal points not only accords with the objective requirements of the overall balance of the national economy, but also with the trend of the future development of the national economy. Therefore, it is absolutely necessary to concentrate appropriate funds and energies on the above fields. But it does not mean that we can place other branches of the national economy in an insignificant position. Developing strategic focal points requires the joint efforts of various trades and enterprises, and breakthroughs in strategic focal areas will in turn bring forward and promote the development of other branches. In our study, we must combine theory with practice and correctly understand the interrelationship and compatibility of the dialectical relations between strategic and nonstrategic focal points. It is wrong to overlook the importance of laying proper emphasis on strategic focal points and to fail to make positive contributions to doing this. On the other hand, it is also wrong to pay attention only to strategic focal points and neglect the development of nonstrategic areas.

We must also take into consideration the fact that China's population is great and its growth rate is too high. This is an important factor which has not only increased the burden of state finance, but also affected economic development and the improvement of the people's livelihood. Under the socialist system, since we can overcome the anarchy of material production, we should and can overcome the anarchy of population growth. In the coming 20 years, it is also one of our strategic tasks to effectively control the population growth and to raise the quality of the population.

/The third focal point proposes to realize our strategic aim in two stages. When studying this problem, we must gain a clear idea of the following: 1) Why must we realize our strategic aim in two stages? 2) What are our main tasks in the first 10 years and in the coming 5 years?/

Realizing our strategic aim in two stages is a correct strategic measure suited to China's economic conditions and trend of development. This is a plan for a gradual, orderly increase in the rate of economic development, and a practical program which strives to suit the subjective to the objective and to bring our initiative into play. In the next two 10-year periods, the first 10 years will be devoted to laying a good foundation, accumulating strength and creating conditions; consequently it will be impossible to achieve a high rate of development. In the second 10 years, we will accelerate our rate of development and enter a new period of vigorous economic development.

Various conditions will restrict our rate of development in the first 10 years. Since the third plenary session of the party, by implementing the principle of readjustment, restructuring, reorganization and upgrading, we have carried out the policy of enlivening our domestic economy and of opening our door to foreign investors. The national economy has therefore developed steadily. However, the many problems left over by history cannot be solved all at once. For instance, we still need a fairly long time to readjust and restructure our disproportionate national economy, and our irrational industrial structure and economic system. It is impossible to change the backward state of energy and communications in a short time. Due to the lack of technological strength and funds, we can only tackle key scientific and technological problems and carry out technical innovations in existing enterprises, and for the time being this cannot be done on a big scale. The training of qualified personnel and the improvement of technological and management standards require a whole process. In the first 10 years, if we can concentrate our efforts on solving the above problems, we will be able to reduce waste, improve economic results and promote productive forces. We can also accumulate strength and lay good foundations for our future development and thus guarantee that there will be a relatively rapid increase in the second 10 years.

In realizing our great strategic aim, the first 10 years, and particularly the first 5 years, are a crucially important period. The tasks of the first 10 years, that is, the tasks of the Sixth and Seventh Five-Year Plan periods, have been clearly explained in the report. In our study, we can also refer to the third part of Comrade Zhao Ziyang's report to the fourth meeting of the fifth people's congress. The report to the 12th CPC National Congress proposes the realization of a fundamental change for the better in our finance and economy within the coming 5 years. We must "markedly improve economic results and steadily maintain a balance in finance and credit, and price stability." The fundamental change for the better in finance and economy seems mainly to involve questions of finance and price, but it is in fact an overall reflection of the entire work of economic construction and of the development of production. Only when we shift the whole of economic work onto the correct path which centers on improving economic results, combine increasing production with practicing economy and do all our work practically and realistically, can we achieve our strategic aim. The whole is composed of parts. Each unit is a piece on the national chessboard. So long as each unit can bring its enthusiasm and initiative into play according to the requirements of overall balance, and make contributions to the realization of the above aim, the whole strategic task can be accomplished even more satisfactorily.

/The fourth focal point deals with four important principles which must be adhered to in realizing our strategic aim. These four principles are actually four dialectical relations in our socialist economic life. They reflect the most important requirements of socialist economic law and play a universal and long-term guiding role in socialist construction. When studying this focal point, we must deepen our understanding of the four dialectical relations by combining theory with practice. In addition, we must act in the light of specific conditions, and prevent and overcome any one-sidedness which might emerge in the course of implementing these principles./

The correct handling of the relationship between carrying out socialist construction and constantly improving the people's livelihood is a requirement of socialist economic law, and primarily of basic socialist economic law. In the final analysis, the purpose of socialist construction is to improve the people's livelihood. But to do this, we must accumulate funds and expand production. Here we are required to handle well the relations between accumulation and consumption and to pay attention to both immediate and long-term interests and the interests of the state, the collective and the individual. Comrade Chen Yun put it this way: "First, we want to eat. Second, we want to carry out construction." In the past few years, we have readjusted the proportion between accumulation and consumption, and the people's livelihood has improved remarkably. But there has been a drop in state revenue, and state funds are excessively decentralized. In the light of this situation, the report proposes that we concentrate our funds on key construction projects so as to change the tendency of excessive decentralization of funds. While continuing to implement the present financial system and protect the autonomy of enterprises, we must appropriately readjust the proportion of distribution between central and local revenue and encourage localities, departments and enterprises to use their funds for construction projects urgently needed by the state. We can only improve the livelihood of the people in the cities and countryside by developing production, not by reducing the state's indispensable construction funds. In this respect, we must further unify our thinking, raise our understanding and resolutely carry out the above principles through studying the report.

Correct handling of the relationship between maintaining the dominance of the state-run economy on the one hand and developing various economic forms on the other is essential, because of the law that production relations must be suited to the character of productive forces. It also has important bearings on bringing into full play the superiority of the socialist system. The state-run economy controls the state's economic lifelines. It is the principal part of the socialist economy. Maintaining the dominance of the state-run economy is the basic prerequisite for guaranteeing socialist modernization, as well as a decisive factor in guaranteeing that the collective ownership system of the laboring masses will advance along the socialist road, and that the individual economy will serve socialism. On the other hand, due to the imbalance in productive forces, we must rationally dispose of and develop various economic forms in coordination so as to compensate for such imbalance. Only in this way can we bring all positive factors into full play, make the urban and rural economy flourish and satisfy the demands of the people. The correct handling of the relationship between maintaining the dominance of the state-run economy and developing various economic forms was a task put forward after the basic completion of the socialist transformation of the means of production. But since then it has remained unsolved. It was only after the third plenary session of the party that the relationship between the two was handled correctly. In our study, we must combine theory with historical experience and deepen our theoretical understanding of the relationship between the two. In other words, on the one hand, we must unswervingly maintain the leading position of the state-run economy so that we can further perfect its management. On the other hand, we must energetically support the development of various economic forms so that they can play the role of enlivening the economy under the guidance of the state plans.

Relying primarily on a planned economy and secondarily on regulation by market mechanism reflects not only the objective requirements of the law governing the planned and proportionate development of the national economy, but also the requirements of the law of value which still plays a role under the socialist system. A planned economy is the essence of the socialist economy. Only by relying mainly on a planned economy can we guarantee the centralization and unification of the country's economic construction and the coordination and balance of the basic proportions of the national economy. On the other hand, only by bringing into play the subsidiary role of regulation by market mechanism, can we supplement what is inadequate in the state plans and enliven the economy. In the sphere of planning and management, this is manifested as follows: Compulsory plans must be effected concerning the production and allocation of those means of production and consumption which influence the national economy and the people's livelihood, especially in those key enterprises which affect the economic situation as a whole. With regard to the purchase of grain and other important agricultural and sideline products, compulsory quotas must be worked out. Furthermore, instructive plans must be implemented with regard to many products and enterprises, and economic levers must be used to guarantee their realization. It is permissible to produce and circulate various small commodities according to market demands and within the limits of state decrees, regulations and policies. Correctly handling the relationship between relying mainly on a planned economy and secondarily on regulation by market mechanism has been a problem frequently encountered over the past years; it will continue to be an important problem which we must continue to try and solve in the future. The phenomenon of laying stress on state plans to the neglect of regulation by market mechanism can still be found; and on the other hand, there is still a tendency to overemphasize regulation by market mechanism to the neglect of the planned economy. To overcome such one-sidedness, we must raise our theoretical understanding of the principles concerned.

The issue of correctly handling the relations between adhering to the principle of self-reliance on the one hand and expanding economic and technological exchanges with foreign countries on the other is actually the issue of correctly handling the relations between China and foreign countries in the course of socialist economic construction. The principle of maintaining independence and self-reliance was, is and will always be our standpoint. In addition, we must also unswervingly carry out an open-door foreign policy, and energetically expand our economic and technological exchanges with foreign countries on the basis of mutual benefit. The purpose of this is ultimately, to strengthen our ability to stand on our own feet. Referring to the relations between China and foreign countries in his "On the Great Ten Relationships," Comrade Mao Zedong pointed out: "Our principle is that we must learn from the strong points of all peoples and countries, and from all the good things in politics, economy, science, technology, literature and arts. But we must learn with analytical and critical eyes. We must not learn blindly, and we must not copy others' experience indiscriminately or mechanically." He also pointed out: "We must resolutely guard against and criticize all the decadent systems and ideas of the foreign bourgeoisie. But this does not prevent us from studying the advanced science and technology of capitalist countries and the scientific aspects of the management of enterprises." We must guard against taking self-reliance to mean isolationism, and being afraid of expanding our economic and technological exchanges with foreign countries. On the other hand, in our economic activities with foreign countries, we must prevent the erroneous tendency of forsaking principles, departing from the correct stand, having blind faith in things foreign and submitting to the corrosive influence of bourgeois ideology.

HOW TO STUDY THE THIRD PART OF THE 12TH CPC CONGRESS REPORT

Beijing RED FLAG in Chinese No 19, 1 Oct 82 pp 45-48

[Article by RED FLAG Editorial Office for Theoretical Education; passages within slantlines published in boldface]

[Text] This part of the report scientifically expounds the importance of building socialist spiritual civilization in the new historical period from the higher theoretical plane of scientific socialism and the higher political vantage point of the future of China's social development and clearly and definitely formulates the principles, tasks and measures of the building of socialist spiritual civilization. The contents comprise the following four main points:

1. The dialectical relationship between spiritual civilization and material civilization.

2. Socialist spiritual civilization constitutes an important characteristic of the socialist system and a major aspect of its superiority.

3. Socialist spiritual civilization must take communist ideology as its core.

4. The aim, requirements and tasks of building socialist spiritual civilization.

/While studying the first main point, it is advisable to deepen our understanding in the following aspects: 1) What is material civilization? What is spiritual civilization? 2) We must have an understanding of the great significance of socialist spiritual civilization by viewing the interrelationship of spiritual civilization and material civilization. 3) We must pay attention to overcoming the ideological trend to overlook the building of spiritual civilization in light of actual conditions./

Civilization refers to the progress and the civilized state of human society. While talking about Morgan's division of stages in ancient societies, Engels pointed out: "The civilized epoch is a period in which human beings have learned to further process natural products and in which real industry and art have taken shape." ("Selected Works of Marx and Engels," Vol 4, p 23)

Here Engels has already clearly brought to light the contents of the two aspects of civilization, namely, the progress of material production and spiritual production of human society. Human history is a history in which people continuously transform the objective and subjective worlds. In the practical activities to transform the objective external world, people create more and more social material wealth to meet the needs of the material life of human beings. This transformation of nature results in material civilization as manifested in improved conditions for material production and in a better material life for the people. Along with this, the production of spiritual values and the spiritual life of mankind also develops and the ability of human beings to understand the objective external world steadily increases. The achievements in this respect are what we call spiritual civilization, as manifested in a higher educational, scientific and cultural level and in higher ideological, political and moral standards.

Spiritual civilization and material civilization constitute the two aspects of human civilization. Their relationship is just like the two wings of a single bird. They are interdependent and not a single one of the two can be dispensed with. Furthermore, fundamentally speaking, material civilization provides a foundation for spiritual civilization. There may be a higher level of spiritual civilization in a situation in which the conditions for material production are relatively on the low side, but without a prosperous and developed economy, such undertakings as education, science and culture will surely be restricted and a backward economy will also interfere with social morality and practices. Therefore, we must do a good job in economic construction so as to ensure the continuous progress of social material production and the continuous enhancement of the level of material life of the people, thus further creating conditions for enriching and developing the production of spiritual values and spiritual life. On the other hand, spiritual civilization gives a tremendous impetus to the development of material civilization. Education, science and others are a latent productive force which gives people knowledge, methods and skills. Once this knowledge, methods and skills are grasped by the working people, they will become a practical productive force. The ideological education in spiritual civilization not only plays a motivating role in the building of material civilization but also ensures its correct orientation. In any society, the class which occupies a dominant position tries to make its own ideological system dominant in the society to accelerate the development of material production and material life in line with the interests and requirements of its own class. In a socialist society, it is the proletarian ideology that occupies a dominant position. The proletarian ideology represents the fundamental interests of the working people and corresponds with the orientation of the development of human society, so any ideological system in history cannot compare with the proletarian ideology in the motivating role the latter plays in the development of material production and material life. It is precisely because of this that we must do our utmost to build socialist spiritual civilization and arm the masses of people with proletarian communist ideology so that they can give play to their enthusiasm and creativity for building a modern and powerful socialist country and forcefully push socialist material civilization forward.

Some people hold that it is not until material civilization is highly developed that we can begin to talk about the building of spiritual civilization or deem that spiritual civilization will spontaneously arise when material civilization is highly developed. This argument reflects the inadequate understanding of the significance of the building of socialist spiritual civilization and the lack of a thorough comprehension of the dialectical relationship of the two civilizations. As we have mentioned above, material civilization provides an indispensable foundation for spiritual civilization and any view that overlooks the building of spiritual civilization is wrong. However, this does not mean that spiritual civilization is a simple and mechanical derivative of material civilization, nor does it mean that spiritual civilization and material civilization develop simultaneously and spontaneously. It must be seen that under given conditions, the level of development of spiritual civilization, and in particular, its ideological contents, and that of material civilization are not even. The development of spiritual civilization can possibly be higher or lower than that of material civilization. The development of ideological education can possibly be higher or lower than that of the cultural aspect of civilization. In the capitalist society, material civilization is highly developed and such aspects as scientific and technological undertakings as well as cultural and educational undertakings are fairly developed. However, on the other hand, of such aspects as ideology and politics as well as ethics and morality, many are decadent and degenerate; the people lead a life devoid of spiritual meaning; and the relationship between man and man is an out-and-out relationship based on money, and so on. All this is determined by its capitalist system. Ours is a socialist society. Although our socialist society is still in its primitive stage of development at present and is not yet highly developed, the political and ideological consciousness and the ethics and morality of the people are far ahead of those people in the capitalist countries with a highly developed material civilization. The main reason for this state of affairs lies in the fact that our country is under the socialist system. Therefore, it is one-sided and unscientific to talk in indiscriminate and general terms about "when the granary is bursting, people will observe etiquette and when clothing and food are ample, people will pay attention to honor or disgrace." This will easily make people think that it seems a spiritual civilization will spontaneously grow with the development of material civilization and will even make people concentrate on the enjoyment of material life and neglect the enhancement of the level of their mental outlook. In fact, material wealth can benefit the people and can also lead the people to degeneration. If we do not enthusiastically build socialist spiritual civilization, the people's ideological consciousness will not necessarily grow with the developed social production and the improved material life.

/While studying the second main point, we must fully understand that socialist spiritual civilization constitutes an important characteristic of the socialist system and a major aspect of its superiority through studying the Marxist basic principle and summing up the practical experience in socialist construction./

We all know that in talking about a society, Marx would first state the economic structure of the society and at the same time, would relate the political and legal superstructure founded on this economic basis and also the social ideology which corresponds to this economy and politics. This exposition of Marx is also applicable in a socialist society. In other words, in analyzing the characteristics of a socialist society, it is not comprehensive to lay one-sided stress on the economic basis and politics without paying attention to the situation of social ideology, culture, education, ideology and morality. In regard to the characteristics of socialism, apart from the public ownership of the means of production, distribution according to work, planned economy and political power of the working class and other working people, as we termed them in the past, there must be one more important characteristic, that is, socialist spiritual civilization. If we fall into a one-sided understanding of socialism and neglect the building of socialist spiritual civilization, we will lose our ability to resist the inroads of various ways of life and ideology which are corrupt, the building of material civilization will possibly deviate from the socialist course and socialism will be in danger of developing in a degenerate fashion.

At the same time, apart from finding expression in such aspects as the elimination of the exploitation system, realization of the public ownership of the means of production, the masses of people being the masters of the country and the implementation of the principle of distribution according to work, the superiority of the socialist system is also manifested in spiritual civilization. Socialism has eliminated the social phenomena of the exploitation of man by man and the oppression of man by man, thus enabling all people to have common fundamental interests, common ideals, common goals of struggle and common moral standards, and even a common sense of law and discipline. Although in a socialist society there exists a class struggle within certain limits and the influences of the remnants of feudal ideas and of capitalist ideology, fundamentally speaking, because all people have common interests and share joys and sorrows together, various virtues, such as ardently loving the motherland and ardently loving labor, being concerned with the collective, finding it a pleasure to help others, being selfless, observing discipline and abiding by the law and heroic dedication to socialism and communism, will always find expression in more and more people. In addition, these common revolutionary ideals, morality and discipline cannot be possessed by any society with class antagonism, which is based on the private ownership system of the means of production. Take the educational, scientific and cultural undertakings for example. China's present level of development in this respect lags far behind that of the developed capitalist countries, but we must see to it that our educational, scientific and cultural undertakings genuinely serve the working people. Therefore, taken as a whole, the more socialist spiritual civilization develops, the more fully the superiority of the socialist system will be manifested.

Seen from the practical experience of building socialism, we have had profound experiences and lessons in the issue of building socialist spiritual civilization. Carrying forward revolutionary traditions and attaching importance to ideological and political work are our party's glorious traditions. In a considerably long period of time, the general mood of our society has been fine. However, during the 10 years of the "Great Cultural Revolution," owing to the sabotage done by Lin Biao and the "gang of four," China's educational, scientific and cultural undertakings were seriously trampled underfoot; anarchism and out-and-out egoism ran rampant and the fine party style and the work style of the people were seriously damaged. These evil influences have not yet been completely eliminated to this day. In the last few years, there has been a renewed increase in the corrosive influence of capitalist ideology coming from other countries in the ranks of our party members and cadres. The history of complications and the present situation have greatly educated us, thus enabling us to acquire a further understanding of the importance and necessity of building socialist spiritual civilization. At present, the 12th CPC Congress report has theoretically made a brilliant exposition of socialist spiritual civilization and affirmed it as an important characteristic of socialism and a major aspect of the superiority of the socialist system. This is a great advance in the party's understanding of socialism and also the inheritance and development of the theory of scientific socialism. It will play a great guiding role in our socialist modernization program.

/While studying the third main point, we must emphatically comprehend that: 1) Why should socialist spiritual civilization take communist ideology as its core? 2) Why should stress be put on the conducting of education in communist ideology during the period of socialism?/

The report points out that communist ideology constitutes the core of socialist spiritual civilization. It is known to all that the so-called core refers to the section of a thing which plays a guiding role in the internal parts of the thing and which determines its nature and orientation. Any society is bound to develop the cultural aspect of spiritual civilization which it needs. However, the scope and level of the cultural aspect can neither determine its own character and orientation nor show the character and orientation of the socialist spiritual civilization of the whole society. This is determined by the character and orientation of the development of another aspect of spiritual civilization--ideological education. Some contents of the cultural aspect, such as education and literature and art, have a class character in such fundamental questions as the guiding ideology of their development and who they serve; the cultural aspect is restricted by the politics and ideology in a society; the other contents such as natural sciences, hygiene and education have no class character themselves but there still exists the question of under the guidance of what ideology they should be developed. As a scientific ideological system which reflects the laws governing social development, communism represents the fundamental interests of the people and occupies a guiding position in all spheres of our socialist society. This just determines that communism will surely constitute the core of socialist spiritual civilization and that we are also surely required to educate the people in communist ideology and morality while building socialist spiritual civilization.

Some people say that while we are in a stage of socialism, it is unwise to raise the question of education in communist ideology and morality. This view is erroneous and does not tally with historical and practical facts. As a social system, the characteristics of communism are from each according to his ability, to each according to his work. Only when the productive forces are substantially developed and the political consciousness of the people is tremendously heightened can the communist system be realized. This requires generations of protracted endeavors. However, the spread of communist ideas and the revolutionary movement for the realization of the ideal of communism already existed long ago in our life. The Chinese communist movement has been carried out in an organized and programmatic way in China since the very day when the PRC was founded. Without the vanguard founded on the basis of the communist ideological system and without influencing and educating the masses in communist ideology, the victory of the new democratic revolution was out of the question, let alone the victory of the economic construction which we are carrying out today! Of course, we are definitely not intending to immediately carry out in society the policies of the higher phase of socialism-communism, but on the contrary, we must persist in implementing the system of distribution according to work and other socialist systems and avoid repeating the errors made in the past under the guidance of "leftist" ideology. However, only when we influence and educate the masses in communist ideology and enhance their political consciousness and enthusiasm for revolution can the socialist orientation of China's modernization be safeguarded, can our socialist society acquire tremendous spiritual motivation and strong fighting spirit and can the inroad of corrupt influences be resisted. It is only in this way that we can fulfill the historical tasks of the socialist modernization program and lay a solid foundation for our advance toward the great goal of communism. In reality, inspired by communist ideology, whether in the period of the new democratic revolution or in the period of socialism, there were thousands upon thousands of heroic fighters who defied personal danger, shed their blood and dedicated their lives to the cause of communism and there are thousands upon thousands of advanced people who are giving all they have to socialist construction. We must encourage a communist ideology and attitude toward labor, learn from revolutionary martyrs and from advanced people and do a good job in every kind of work in the socialist modernization program.

/While studying the fourth main point, we must clearly and definitely understand that the aim of our building of socialist spiritual civilization is to inspire more and more members of our society to become working people with lofty ideals, moral integrity, education and a sense of discipline through practical work in various fields, and in addition we must foster and develop in all of society new social relations which embody socialist spiritual civilization./

Socialist spiritual civilization consists of two aspects, cultural development and ideological education. Building socialism and communism requires highly advanced cultural and scientific knowledge. Lenin pointed out: "It is impossible to establish a communist society in a country of illiterates." He also said: "Only when he enriches himself with the whole wealth of knowledge created by mankind can a man become a communist." ("Selected Works of Lenin," Vol 4, pp 348, 357) It is beyond imagination to build socialism and communism without inheriting and grasping the whole wealth of knowledge of mankind and without ensuring the high development of the educational, scientific and various other cultural undertakings. Owing to social and historical reasons, erroneous ideas such as the underestimation of the importance of education, science and culture and discrimination against intellectuals were rife in our party for a fairly long time, and although they have now been overcome to some extent, they still call for further elimination. We must further implement the policy toward intellectuals, arouse the enthusiasm of the intellectuals and ensure the continued development of the cultural aspect both ideologically and organizationally. We must fulfill the task of achieving universal primary education in the main throughout the country in 1990, and at the same time, pay close attention to the training of cadres so that they can become more knowledgeable and specialized, to the tutoring of the young staff and workers so that they can acquire more general knowledge and to the development of various other cultural undertakings.

While strengthening cultural development, we must vigorously carry out ideological education. The contents of ideological education are many but the most important one is revolutionary ideals, morality and discipline. We must first of all help party members, Communist Youth League members and all other advanced elements foster communist ideals, morality and practices and attitude toward labor, foster lofty ideological values, way of life and aesthetic standards, foster the spirit of consciously abiding by the law and a high sense of organization and discipline, persist in subordinating the personal and partial interests to the interests of the whole and the immediate interests to the long-term interests, foster the spirit of doing everything for socialist modernization and for the socialist motherland and carry forward the lofty spirit of patriotism and internationalism through effective propaganda and educational work, ideological and political work and the work in various other spheres. Strengthening cultural development and ideological education is aimed at inspiring more and more members of our society to become working people with lofty ideals, moral integrity, education and a sense of discipline.

The enhancement of the mental outlook and ideological values of every member of our society will inevitably find expression in social relations. While building socialist spiritual civilization, we must also foster and develop a new type of social relations which embody socialist spiritual civilization. These relations refer to the relationship of mutual respect, mutual concern, equality, friendship and solidarity in the various intercourses of people's social life, such as the economic, political and family life, and they also contain solidarity, friendship and mutual assistance in common struggle and common progress among the people of all nationalities throughout the country in terms of ideology, politics and morality and justice, and a relationship which is based on the identity of fundamental interests. At present, there still exist various problems in the social relations of our country. This is because it has not been long since the establishment of our socialist society which "still bears the birthmark of the old society in the various fields--the economic, the moral and the spiritual." ("Selected Works of Marx and Engels," Vol 3, p 10) All this coupled with the pernicious influence of anarchism and out-and-out egoism incited by the Lin Biao and Jiang Qing counterrevolutionary cliques during the "Great Cultural Revolution," has not been eliminated up to now. This cannot but bring a serious negative influence in social relations. In order to foster and develop the new type of social relations, apart from doing a good job in the building of material civilization, the most fundamental measure is to educate the people in revolutionary ideals, morality and discipline and to oppose the corrosive influences of feudal and capitalist ideologies.

To build socialist spiritual civilization and strengthen ideological education, we must organize a mighty contingent of militant ideological workers able to persuade and act as a magnet for others and also mobilize the whole party and all people to enthusiastically plunge into the building of socialist spiritual civilization. Since ideological education in our party is the pillar of the building of socialist spiritual civilization in the whole society, so the leadership of the party and the exemplary role which the party members morally and ideologically play are of decisive significance.

To build socialist spiritual civilization and strengthen ideological education, we must do a good job in the various types of work, mainly in doing more to educate the masses of people, and first of all the cadres and youth, in Marxism-Leninism-Mao Zedong Thought and in history, morality and discipline; we must promote education in ideals, morality and discipline among the entire population, and first of all among the youth, within the next 5 years. In the last years, the mass activities for building spiritual civilization unfolded in the PLA and among the people in general should be developed and persisted in. We must bring about a fundamental turn for the better in standards of social conduct.

All of us must, through study, deepen our understanding, heighten our confidence and wage resolute struggle against the various unhealthy tendencies in society and the vile social evils in light of the actual conditions and make contributions in bringing about a fundamental turn for the better in standards of social conduct and in building socialist spiritual civilization.

OUR BANNER IS COMMUNISM

Beijing RED FLAG in Chinese No 19, 1 Oct 82 inside back cover

[Song with lyrics by Li Yourong [2621 0671 1369], music by Meng Xianbin [1322 2009 2430]]

[Text] With pride:

1. We are the boys and girls who are vigorously developing China,
   We have achieved glorious and heroic achievements
   And the ideal within our hearts
   Is communism in all its magnificence.
   Oh! Communism!
   Our great banner,
   You surge forward with greater strength than all the streams and rivers,
   You are more magnificent than the rays of the sun
   You encourage us to go and suffer and struggle
   In order to achieve internationalism
   Struggling until the end!

2. We have drawn up the blueprint for the four modernizations,
   We will cultivate the flower of effervescent culture,
   And the culture toward which we are heading
   Is that of glorious communism.
   Oh! Communism!
   Our radiant banner,
   You are more radiant than the crimson clouds,
   More breathtaking than the spring scenery,
   You encourage us to go and vigorously develop China,
   In order to achieve internationalism,
   Struggling until the end!

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

THE 12TH CPC NATIONAL CONGRESS WILL LEAD CONSTRUCTION TO VICTORY--ON UNDERSTANDING AND MASTERY OF THE LAWS

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 2-6

[Article by RED FLAG commentator]

[Text] In his recent talks with Comrade Kim Il-song, Comrade Deng Xiaoping said: "The role of the 12th congress is the same as that of our party's 7th congress. The 7th congress led the revolution to victory; the 12th congress will lead our construction to victory." This is a correct summary of the historical roles of the 7th and 12th congresses.

As for the view that the seventh congress led the revolution to victory, this has been proved by history and no comrade in our party disagrees with this view. However, are there good reasons for the judgment that the 12th congress will lead our construction to victory? What reasons is this view based on? Is it sufficiently well founded? In the first part of his speech at the 12th congress, Comrade Hu Yaobang answered these questions. In his opening speech at the congress, Comrade Deng Xiaoping pointed out: "Compared with the time when the eighth congress was held, our party's understanding of the law of our country's socialist construction is now much deeper, our experiences are much richer and our consciousness and steadfastness in implementing and carrying out our correct policies has been greatly heightened." Viewed from the implementation of the party's correct line and its series of principles, policies and measures, the question of what reasons form the basis of our judgment that the 12th congress will lead the construction to victory is precisely the question of whether we understand and grasp the law of socialist construction.

In his "Materialism and Empirio-Criticism" Lenin said: "As in any scientific field, in the epistemological field, we should also think in a dialectical manner. This means that we should not think that our understanding is fixed and will not change in the slightest; on the contrary, we should analyze by what means we can turn ourselves from knowing nothing to knowing something and from having an incorrect understanding to having a relatively correct understanding." ("Collected Works of Lenin," Vol 14, pp 98-99)

In the initial period following the founding of the PRC, our party led the people of all nationalities throughout the country to achieve, step by step, the transition from new democracy to socialism, rapidly recovered the national economy, began economic construction in a planned manner and basically completed the socialist transformation of the private ownership of the means of production in nearly all the areas in our country. The sober understanding of the social structure of China and of the trend of historical development enabled our party to creatively chart a path of socialist transformation suited to the special features of China. However, at that time, we knew very little about the law of socialist construction. This has now greatly changed. The first part of the report to the 12th congress expounds, from the angles of ideology, politics, organization, economy, cultural and educational undertakings, military affairs and party building, on the tremendous achievements we have scored since the 3d Plenary Session of the 11th CPC Central Committee in bringing order out of chaos in our actual work and in making a clear distinction between the rights and wrongs of our guiding ideology. Through summing up the rich experience of the past 30 years, our understanding of the law of socialist construction in China has already undergone a process from being incomplete and incorrect to being comparatively complete and correct. Compared with the time when the eighth congress was held, our understanding is indeed much deeper and more correct. No law can be understood and mastered at a single stroke. No one has ever been able to see through and skillfully master the internal relationships of things at first sight. This has never been possible. However, we can now safely say with pleasure that our understanding and mastery of the law of socialist construction has already in the main undergone a process from knowing nothing to knowing something and from incomplete, incorrect understanding to comparatively complete, correct understanding.

This process cannot be plain sailing. Often there are many twists and turns including the struggle between correct and erroneous ideas and the struggle of correct ideas to overcome errors. Just as Comrade Mao Zedong said in 1962 at the enlarged central work conference: "During the period of democratic revolution, only after comparing the two victories and two defeats could we understand the objective reality in China. On the eve of and during the war of resistance against Japan, I wrote some articles, such as 'Problems of Strategy in China's Revolutionary War,' 'On Protracted War,' 'On New Democracy' and 'Introduction to the Communist,' and drafted some documents on policies and tactics for the Central Committee. In all these writings, I summed up our revolutionary experiences. These articles and documents could only be produced at that time, not earlier, because previously we had not gone through the great storms of the two victories and failures and had not gained sufficient experience; therefore we could not have understood the law of the Chinese revolution." Similarly, "we must also undergo a process before we can understand the law of socialist construction. We must proceed from practice and gradually undergo the change from having no experience to having some experience and from having relatively less to having relatively more experience. In this way, our understanding will leave the realm of necessity in which we do not understand socialist construction. We will gradually overcome our blindness, understand objective law, thus obtaining freedom and enabling our understanding to enter the realm of freedom." "We should be prepared to suffer many setbacks and failures caused by our ignorance of the law in order to obtain experiences which will enable us to achieve final victory."

Law is invisible and untouchable, and we can understand and master it only in practice. If we act in accordance with law in practice, we will win victory. This will be beneficial to our understanding and mastery of the law. If we run counter to law in practice, we will suffer defeat. This will also help us understand and master the law.

In discussing his book entitled "Questions Concerning the Soviet Socialist Economy" Stalin said: "When a law has not been violated, it remains idle and no one knows where it is. It exists everywhere, but we do not know its existence." "Generally speaking, a law can only be felt when it is violated, but violation of the law will inevitably bring about evils." Here he expounded on the idea that the punishment that people incur when they go against the law enables them to draw lessons from their failure. We find many such examples in people's daily life. For instance, when there is enough air, we do not feel the existence of air or its indispensability to our survival. However, when we are shut in a room where there is not enough air, we will find it difficult to breathe, and then, it is very easy for us to realize that air is essential for our survival. In order to understand objective laws, we need negative experience as well as positive experience.

In a country like China, which is populous and has a long and complicated history, while leading revolution and construction, we cannot but make repeated comparisons of victory and failure in order to understand and master the law of revolution and construction. Only thus can we complete the process from knowing nothing to knowing something and from incorrect to comparatively correct understanding.

For every communist, it is a very severe challenge to adopt a proper attitude toward victory and especially toward failures. Our party and many comrades have the experience of being carried away by victory, losing their modesty and prudence. What should we do when we suffer a failure? We firmly oppose the practice of wavering, becoming dejected, deserting or even betraying the revolution because of failure. When the great revolution in 1927 failed, many comrades died heroically. They are heroes and deserve to be called communist fighters. We must always remember them and learn from them. Under Chiang Kai-shek's White terror, there were also some people who became dejected, and lost faith in the revolution. Some of these people dropped out of the revolutionary ranks or retired from public life. Others published confessions in Kuomintang newspapers and some others even became traitors. Purging the party of those who betrayed it will make our party stronger, purer and more combatworthy. Moreover, we have to handle correctly the problem of how we should treat those comrades who are still loyal to the revolution but have committed mistakes. We do not approve the adoption of any absolute attitude toward these comrades or the practice of being satisfied merely with putting the blame on a few individuals and holding them responsible for the failure. On the contrary, we should act in the way that Comrade Mao Zedong told us. We should concentrate our efforts on analyzing the background in which the mistakes were committed, the details of the mistakes and their social, historical and ideological sources, and adopt the policy of learning from past mistakes to avoid future ones, and curing the sickness to save the patient. It is a very unworthy "revolutionary" who becomes dejected, resorts to complaining and reproaching, is querulous and even refuses to carry out revolution any longer when the revolution suffers temporary setbacks. At the 11th congress of the Russian Communist Party (Bolshevik), Lenin said that the proletariat was not apprehensive of acknowledging the things that it had not done satisfactorily in its revolutionary cause as well as the things that it had done satisfactorily. He said: "We are not afraid to speak out about our weak points and we are capable of learning to overcome our weak points." ("Collected Works of Lenin," Vol 33, p 275) When we suffer a failure we should conscientiously sum up our experiences and resume work from the very beginning in a more prudent and persistent manner. Only this constitutes the revolutionary work style we communists must have.

In 1957 our country entered the period of all-round socialist construction. Since then, we have achieved great successes, but have also committed some mistakes, such as the expansion of the scope of the anti-rightist movement, the "Great Leap Forward," "struggle against right deviation" and especially the "Great Cultural Revolution" which lasted a decade and brought about the most serious setbacks and losses since the founding of our country. Our victories and failures have repeatedly educated us. The mistakes, setbacks and losses caused by our violation of the law of socialist construction have made us especially conscious of the importance of understanding and mastering the law and enabled us to draw even more profound lessons related to the understanding and mastery of the law. It is precisely because of repeated comparison between the victories we achieved and the failures we suffered after the 8th party congress that this 12th party congress was able to sum up the experiences of our victories, draw lessons from our failures, obtain relatively comprehensive views conforming to objective laws and formulate a correct line and a series of correct principles, policies and measures.

It is always the case that at first, only a few people understand and master the law; later, a relatively large number of people do so; and still later, most people begin to do so. It was Comrade Liu Shaoqi in Yanan who stated for the first time that we should respect the minority. This is an important idea that we have drawn from the historical experience of the Chinese revolution. Within our party, the law that governs the Chinese revolution was first understood and mastered by Comrade Mao Zedong and some other comrades of the old generation of revolutionaries. At first, there were only a few of these people. However, could the majority of the comrades within our party accept this correct understanding immediately, turning it into the common wealth of all the comrades in our party, without personally and repeatedly drawing lessons from both positive and negative experiences? Obviously, this was not the case. Our practice has already proved that Comrade Mao Zedong's understanding of the law of Chinese revolution and his ideas about the Chinese revolution are correct. Why, then, was he excluded from the central leading group after 1930 and especially after the time when the Provisional CPC Central Committee moved to the central soviet area? This was because at that time, most of the leading cadres did not realize that he was right. It was only after the failure of the fifth anti-encirclement struggle and at the Zunyi conference when most of the leading cadres recalled the victories achieved under the leadership of Comrade Mao Zedong and earnestly drew lessons from both positive and negative experiences that they began to admit that Comrade Mao Zedong was correct, and clearly acknowledged his leading position in the Red Army and the CPC Central Committee. It was only after the Zunyi conference and after the historical turning point which followed it that we began to achieve one victory after another in our democratic revolution and finally established the PRC. During the 30 and more years since the founding of the PRC, our understanding of the law of socialist construction has been deepening and improving step by step. The CPC Central Committee concentrated the correct understanding of all the comrades in our party and led our construction cause from victory to victory. The party Central Committee itself is a collective. Due to the fact that Comrade Chen Yun has been engaged in economic work for a long time, it is appropriate to say that he is one of the first people to understand the law governing important issues in socialist economic construction. The speech delivered by Comrade Chen Yun at the Eighth CPC Congress in 1956 was extensively praised inside the party. However, after the campaigns of the "Big Leap Forward" and "opposing right deviations," his correct ideas on economic problems no longer worked. Since the 3d Plenary Session of the 11th CPC Central Committee, some strategic decisions and important measures proposed by Comrade Chen Yun have been accepted by the central authorities and have been proved to be more and more effective in practical work. Thus, most of our comrades profoundly realize that they should learn from Comrade Chen Yun's methods for observing economic phenomenon and handling economic problems. The new party constitution adopted by the 12th party congress makes a clear stipulation on the issue of respecting the minority. Our party forbids any form of personality cult. We should ensure that the activities of party leaders are supervised by the people and at the same time uphold the prestige of leaders who represent the people's interests. Every party member and cadre must resolutely carry out in their actions the decisions of the Central Committee and the party organizations, but at the same time, be allowed to have reservations and present their opinions to the party organizations, and even to the Central Committee. Our organizational principle is that the individual should be subordinate to the organization, the minority subordinate to the majority, the lower level subordinate to the higher level and the whole party subordinate to its national congress and its Central Committee; but at the same time the opinion of the minority should be respected. In discussing and making decisions on problems, party organizations should conscientiously consider the different opinions of the minority. By so doing we will be able to overcome our one-sidedness.

Marx and Engels said in their "Holy Family" that historical movements constitute the cause of the masses and that along with the deepening of historical movements the ranks of the masses will inevitably expand. The process of historical development is precisely the process of the expansion of the ranks of the masses who understand and master the law of social development. The victory of the socialist cause has greatly promoted the progress of this development and has opened up a wide sphere for the broad masses of people to master Marxism--the most scientific and revolutionary theory--and thus become the masters of history. However, the masses of people cannot master the law of socialist society spontaneously. What has been proved by our practice is that in order to make the masses really master the correct line, principles and policies we should carry out the necessary propaganda, education and other work to enlighten them. This work should be carried out by adopting diversified methods in order to make it popular and acceptable, enabling us to guide the masses toward understanding and mastering the law through their personal experience.

It can be said that in all periods our cadres at all levels and on all fronts underwent positive and negative education and tests. What is especially heartening is that the college graduates and the cadres of similar educational standard whom we have trained since the founding of the PRC have grown up with the socialist cause. These people are at the prime of their life, know their profession well and have undergone positive and negative education and tests. Our cadres and our people are continuously making efforts to understand and master the law of socialist construction and an increasingly large number of them will become the conscious masters of the development process of history. This will enable them to play an increasingly important role in the development of our cause.

In his article entitled "Problems of Strategy in China's Revolutionary War," Comrade Mao Zedong pointed out that we should study the law of war, the law of the revolutionary war and the law of the Chinese revolutionary war. This means that we should study the problems related to the general and specific laws governing various categories and subcategories of wars. Similarly, we should also realize that we must study the law of construction, the law of socialist construction and the law of China's socialist construction. All the experiences that have been drawn on from the construction of other countries, especially that of other socialist countries, are important for us. We should assimilate the part of these experiences useful to us as reference. We should also enrich these experiences and develop them. However, we will be bound to fail if we mechanically copy these experiences. In the past, we copied the experiences of Soviet socialist construction. During the past few years, quite a few of our comrades affirm, without analysis, the experiences of certain foreign countries, but fail to pay attention to understanding and mastering the experience of China's socialist construction or to proceeding from China's reality. In his opening speech at the 12th congress, Comrade Deng Xiaoping said: "To integrate the universal truth of Marxism with the concrete realities of China, blaze a path of our own and build socialism with Chinese characteristics--this is the basic conclusion we have reached in summing up our long, historical experience." We should continue to research deeper into the general law of construction and of socialist construction. However, we should not be satisfied with the mere understanding of these general laws. We must understand and master the specific performance of these laws under China's conditions and we must understand and master the special laws governing China's socialist construction in different periods and spheres.

Our party is one which upholds struggle and action and a party characterized by the integration of theory and practice. Our understanding of objective laws is not only aimed at gaining the ability to talk about, or obtain academic knowledge of them. For communists, the correct understanding of objective laws is aimed at observing the requirements of objective laws to make revolutionary changes to the world and lead the people to promote the development of history. Therefore, our correct understanding of these laws must lead to the formulation of the correct line, principles and policies and to the action of leading the masses of people, through our party, to implement them.

It is precisely because we have to combine our understanding with the conscious activities of the masses, in creating history that having mastered the theory, we should return to practice and apply the theory to our actions. Therefore, it is insufficient to have only a general line. We must also solve the problems concerning the actual implementation of the general line on various fronts and in all the areas of our work. This is an important difference between the 12th congress and the 8th congress. The line formulated by the 8th congress was correct, though it was not clear, definite or perfect. However, the concrete measures for implementing this line on all fronts and in all areas of our work had not yet been discussed at that time. At the enlarged central work conference, Comrade Mao Zedong said that in carrying out both revolution and construction our party must have a wholly convincing general line suited to objective conditions. However, we had also to formulate, under the guidance of the general line, a series of appropriate and concrete principles, policies and methods related to our work in all fields including industry, agriculture, commerce, education, military affairs, politics and party affairs. Only when we had formulated these principles, policies and methods, could we educate our cadres and masses, unify their understanding and enable them to do their jobs well. These words remain completely correct even today. The reason why the seventh congress led the revolution to victory is because it formulated not only a general line for the new democratic revolution, but also a series of principles, policies and methods for actually carrying out this general line on all fronts and in all our work. This enabled us to unify the thoughts and actions of the whole party after the seventh congress and quickly defeat Chiang Kai-shek. The report to the 12th congress puts forward our party's general task in the new historical period, that is, "to unite the people of all our nationalities to work hard and independently to achieve, step by step, the modernization of our industry, agriculture, national defense and science and technology and to make China a culturally advanced and highly democratic socialist country."

With regard to the understanding and mastery of the law of socialist construction, we have undergone the process from knowing nothing to knowing something and from incorrect to comparatively correct understanding. We have experienced both victory and defeat in this respect and have summed up both positive and negative experiences. More and more of our cadres and people have come to understand and master this law to varying degrees. In practice, we have gradually come to understand the law of socialist construction in general and the special law governing Chinese socialist construction. We have a more definite and complete general line and have worked out a series of guiding principles, policies and methods suitable to various fronts, quarters and work. All of this guarantees that we will win still greater victory in our cause.

When discussing commanding battles, Comrade Mao Zedong said that the reason why people make mistakes in commanding battles is that their deployment and command in war and battles are not suited to the conditions of the time and place, and their subjective guidance is not suited to actual objective conditions; in other words, they fail to solve the contradiction between the subjective and the objective. For a revolutionary, solving the contradiction between the subjective and the objective is a very important task. It is inevitable that people will have different levels of ability. Militarily, doing a good job requires more victories and less defeats. For any party or individual, there is never complete accordance between the subjective and the objective. However, it is possible to achieve relative or basic accordance between them. If this is achieved, we will be basically, or on the whole, correct. Our understanding and mastery of the law of socialist construction will be further perfected and corrected in our practice. Just because of this, we can ensure that we will commit few mistakes or avoid committing big mistakes and that we will discover and correct our mistakes quickly.

In short, at present, our party, our party Central Committee and most of our cadres have a deeper understanding of the law governing our country's socialist construction compared with the period of the Eighth CPC Congress. Thus, we may conclude that the view that the 12th CPC Congress will lead construction to victory is expressed on a completely scientific basis. We shoulder the great task of the creation of a new overall situation in our socialist modernization. Let us continue to enrich and deepen our understanding of the law of socialist construction in order to score new historical achievements and new victories!

CSO: 4004/6

COMMUNISTS MUST STRICTLY OBSERVE PARTY DISCIPLINE

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 7-10, 37

[Article by Zhang Yun [4545 5686]]

[Text] From the day a man gets his Communist Party membership, he is not exempt from the necessity of observing the following regulations: "Individual party members are subordinate to the party organization, the minority is subordinate to the majority, lower party organizations are subordinate to the higher party organizations, and all the constituent organizations and members of the party are subordinate to the national congress and the Central Committee of the party." These four regulations are, on the one hand, the basic principle of the party's system of democratic centralism. They are, moreover, the iron discipline built on the base of the party members' high degree of consciousness. With Marxism-Leninism-Mao Zedong Thought as its guide to action, the CPC relies on this organizational principle and discipline to keep the ranks in good order and in step and ensure the implementation of the party's line, principles and policies in different historical periods. In this way, the CPC leads the people of the whole country to overcome the difficulties and hardships on our road and to continuously win new revolutionary and construction victories. In July 1982, at a seminar, Comrade Deng Xiaoping rightly pointed out: "Without discipline, it is impossible to dedicate ourselves heart and soul to the same cause. In the past, we relied on discipline to start a revolution. The discipline we relied on was a discipline based on political consciousness. Since the founding of the CPC, this has been the best practice."

The new party constitution passed by the 12th CPC National Congress imposed strict ideological, political and organizational demands on party members and cadres. These demands are stricter than the ones imposed by the former party constitutions. The new party constitution has placed the problem of strengthening party discipline in an extremely important position and has made some important new provisions. These have important significance for the party in power in the new historical period.

To Conscientiously Observe Discipline Is an Expression of Strong Party Spirit

The general program of the new party constitution makes the adherence to democratic centralism as "one of the three essential requirements" that must be achieved in order to "strengthen party building, carry forward the party's fine traditions and enhance the party's combat strength." In addition, it demands that, within the party, democracy be given full play, a high degree of centralism be practiced on the base of democracy and a sense of organization and discipline be strengthened, so as to ensure unity of action throughout its ranks and the prompt and effective implementation of its decisions. Chapter I of the party constitution clearly stipulates that party members should "accept the party's program and constitution," and should also, "join and work actively in one of the party's organizations, carry out the party's decisions and pay membership dues regularly," "conscientiously observe party discipline and the laws of the state." Chapter VII of the party constitution clearly stipulates that "a Communist Party member must consciously act within the bounds of party discipline." In addition, it has made concrete provisions for the maintenance of party discipline. The question of whether or not the provisions of the new party constitution are being strictly implemented is closely related to the question of whether the Marxist-Leninist principles of party building and party organization are being adhered to and of what our party is being built into. All comrades must take this large problem seriously. We must most certainly not trivialize it.

We all know that as early as 1902 to 1904, when Lenin started to build the Russian Social-Democratic Labor Party (later, it was changed to the CPSU), he was engaged in a heated debate with Martov on the question of what kind of party should be built. At that time, Lenin and his comrades-in-arms defended the Marxist principle of the party's role, adhered to the ideas that the party had to be the advanced, conscientious and organized vanguard of the working class and that only those who accepted the party's program, supported the party materially and joined in one of the party organizations could become party members. He strongly opposed recruiting those who accepted the party's program but were unwilling to join in one of the party organizations and who did not, in fact, observe discipline, as members. The clique represented by Martov agreed that to accept the party program and to support the party materially should be the necessary condition for membership, but they did not accept that joining one of the party organizations and observing party discipline should also be a condition for membership. To counter the worship by people like Martov of the spontaneity of the labor movement and their attempting to appease the Russian intellectuals' fear of the proletarian sense of discipline and organization, Lenin clearly pointed out: "In the end, it is a matter of choosing between two alternatives: consistent application of the principle of organization, or the sanctification of disunity and anarchy." ("Selected Works of Lenin," Vol 1, p 456) The debate over the organizational principle for party building ended in the victory of Lenin's correct views and stand. The Bolshevik Party, which was built in accordance with Lenin's principle of party building, through arduous struggles, succeeded in gaining victory in the October Revolution and thus ushered in a new era in human history.

Our party was built in accordance with Lenin's principle of party building. In his essay, "On the People's Democratid Dictatorship," Comrade Mao Zedong tells us that our party has "three principal weapons to defeat the enemy."

The first of these is: "a well disciplined party, armed with the theory of Marxism-Leninism and using the method of self-criticism, which is linked to the masses of the people." ("Selected Works of Mao Zedong," Vol 4, p 1417) In addition, of the four notable characteristics of the party, he puts "disciplined" in the first place. In the crucial moment of the third revolutionary civil war period, Comrade Mao Zedong's mobilization order, with its unique style, placed "strengthening the sense of discipline" side by side with "the troops' advancing and one inch of growth in production" and considered them the necessary conditions for "constant and regular victory in revolution." The now widely known "The Three Main Rules of Discipline and the Eight Points for Attention" song emphasizes from the start, that "victory can be won only by keeping in step." Our party has successfully led China's revolution and construction from victory to victory. This fact cannot be separated from our party's adherence to Lenin's principle of party building and strengthening the sense of organization and discipline.

Every party member should, through the study of party history and the study of Lenin's and Comrade Mao Zedong's theory of party building, particularly the discussions on discipline, strengthen his understanding of the tremendous importance of party discipline. He should establish the firm concept of discipline and thoroughly understand that adherence to democratic centralism and the strengthening of party discipline is the key to organizationally maintaining and consolidating the party's high degree of political and ideological consistency, implementing the correct line, principles and policies of the party and promoting the party's combat strength. An important aspect in strengthening the training on the party members' party spirit is to continuously strengthen our sense of organization and discipline in revolutionary practice. Through conscientious observance of party discipline, our strong party spirit is shown. Only those who can achieve this can be called qualified Communist Party members. Those who disregard organization and discipline and stick to their old ways of doing things are not qualified to be Communist Party members. They cannot remain in the party.

Set Strict Demands With Regard to Major Issues and Do Not Deviate From Standards With Regard to Minor Issues

The discipline that should be observed by Communist Party members includes many things and there are many aspects to it. However, we can summarize it in two points: 1) what should be done, what is allowed to be done; 2) what should not be done and what is not allowed to be done. That means, we must conscientiously exert all our strength to do things beneficial to our party, the state and the people in accordance with the party's resolutions and demands. Moreover, we should also influence and mobilize other people to do the same thing. All the things which are not beneficial to the party, state and people must be those things not allowed by party discipline and the laws of the state, so we should resolutely not do them. In addition, we should supervise and warn other people not to do them and be brave in the struggle against the acts which violate party discipline and laws of the state.

On this point, the problem of how to handle major and minor issues should be emphatically discussed.

Basically, the major concern of a Communist Party member is to unswervingly adhere to the demands of the "admission oath," keep a firm proletarian revolutionary stand and dedicate his life to struggling for the implementation of the communist ideal. At the present stage, the major issue is to adhere to the socialist road, people's democratic dictatorship, leadership of the party and Marxism-Leninism-Mao Zedong Thought, to keep political consistency with the Central Committee and to unswervingly implement the party's line, principles and policies since the 3d Plenary Session of the 11th CPC Central Committee, especially the program to create a new situation in all fields of socialist modernization passed by the 12th CPC National Congress. It is necessary to protect the unity and unification of the party in the same way we protect our eyes, strictly observe the party constitution and the "Guiding Principles for Inner-Party Political Life" and struggle against all unhealthy tendencies inside the party and acts which violate party discipline and laws of the state and which endanger the party's cause. If a Communist Party member can make strict demands on himself in these major issues and not be influenced by his own emotions and the prevailing tendencies, he has observed the party's discipline in the political sense.

The party demands that every party member take a strong stand on major issues. In addition, he should also be careful about minor issues. For instance, everybody must straighten their ideological style, work style and life style, manage love, marriage and family life well, be upright and fair in handling people and business, under no circumstances commit crooked acts, refrain from the vulgar "study of connections," not pursue privileged living and not become corrupt, degenerate and so on. In other words, with regard to minor issues, it is also necessary to set "strict demands on ourselves" and not deviate from the standards of the party constitution and the "principles."

With regard to the major and minor issues, one is primary and the other secondary, but there is not a sharp line of demarcation between the two, they are interlinked. In the past, there was a popular saying: "A gentleman disregards the minor issues." It seems that as long as things are not going too badly with the major issues, it is all right and the minor issues are of little importance so it is not necessary to be too strict. Some find the excuse of "no gold is 100 percent pure, no man is perfect" to console themselves and have an easy conscience in "disregarding the minor issues." This is incorrect.

1. We materialists accept the objective fact that "no gold is 100 percent pure and no man is correct." In selecting and appointing people to posts, it is correct "not to discard a huge piece of timber just because one inch of it is rotten." Our comrades should be "lenient and forgiving in treating people" and not be too testy and critical. But, every party member should "set strict demands on himself," not be satisfied with being "basically qualified" or "barely qualified," compare himself with others

and spur himself on to a high standard and become a qualified Communist Party member. This is certainly possible. The countless revolutionary martyrs are our models. The emerging advanced people on all fronts are also good models for us to follow. Is there any reason not to strive in this direction?!

2. As far as development is concerned, small things can become great. "If a small hole is not mended, it becomes a big hole with a diameter of 1.5 chi," "one ant hole may cause the collapse of a thousand-li dike," such sayings vividly depict the importance of checking erroneous ideas at the outset. Inside our party, there are people who become morally degenerate. This starts with their "disregarding the minor issues." We have enough of such lessons. It is hard to imagine a Communist Party member having a dual personality, being devoted heart and soul to public interests in political life, but in private life being heart and soul devoted to private interest. In other words, he has no communist morality in his life, he is infected with the foul odor of the extreme individualism of the exploiting class, his valley of greed can never be filled, he leads a fast life. However, in political life, faced with major issues of right and wrong, he takes a clear-cut stand and devotes his life to implementing the communist ideal. Like water and fire, these two are incompatible, how can they "peacefully coexist"?

3. Our party is based in society and party members carry out their activities among the masses. The party's image formed in people's minds and the party's prestige determine whether the party's line, principles and policies are correct and whether they are advantageous to people. In addition, to a great extent they determine the activities of the party organizations at all levels and the performance of every party member. The masses not only "listen to their words" but also "observe their behavior." If the party organizations at all levels and every party member can meet the demands imposed by the party: proceed from the people's interests in all aspects, "be the first to be concerned about what should be worried about and be the last to enjoy themselves," think what the masses think about, be eager to meet the needs of the people and play an exemplary and leading role in all aspects, fear neither hardship nor death in upholding the cause of the party and the people, persistently think and act in one and the same way and be as good as their word, then, the people would wholeheartedly love and support the party and forever follow the party. However, if the party organizations and party members do not act in accordance with the party's demands, or even act in ways contrary to the party's demands, use discipline to deal with people but do not themselves keep within its bounds, speak in high-flown phraseology but fail to carry out their pledges, at every turn think of themselves before others and not be concerned about the people's welfare and suffering, "strive for fame in the central government and strive for wealth when they are out of it," have much interest in acting like high officials and overbearing bureaucrats and seriously cut themselves off from the masses, then, what remains of the party's prestige among the masses? Under such conditions, all magnificent ideals and plans cannot be realized. Thus, speaking of keeping the close ties between the party and the masses, it is necessary for party members to pay attention

to both the major and minor issues and to conscientiously observe party discipline in both aspects.

Strive To Form Habits So That They Become Natural to You

Many of our old party members have a commun understanding that it is not difficult to observe discipline in doing something once, but it is difficult to observe discipline under all circumstances and conditions everywhere and at any time. But, this is exactly what the party and the masses require of us, which means it is necessary for us to play an exemplary role in observing discipline everywhere and at any time. What shall we do? The most important thing is to strengthen the training of party spirit, establish a firm concept of discipline, continuously promote our consciousness in observing discipline and strive to form a habit so that it becomes natural to us. In my 57 years of revolutionary practice, I have tried to find an answer. My conclusion is that principally it is necessary to make vigorous efforts in the following aspects:

1. Know the rules. It is necessary to vigorously grasp study, strive to familiarize ourselves with the party's program, the party constitution and the party's concrete rules and regulations (for instance, the "Guiding Principles for Inner-Party Political Life" and others), the line, principles and policies of the party, the resolutions, provisions and system of the party in all aspects, strive to have a pretty good idea of them and to speak and act in accordance with them. Otherwise, we can have no idea of what is right, what is wrong, what can be done and what cannot be done. In such a case, we are blind. We do not have anything to follow in doing or saying things. We are like a blind man who walks on the road. He bumps into a wall or falls on the ground, but he does not know why. In this way, how can we have consciousness in observing discipline and how can we play an exemplary role in observing discipline?

2. "Be watchful over oneself when one is alone." This is a piece of Confucian jargon from Chinese history, which means: Even when one is alone, one should be careful and observe moral principles. In his work "How To Be a Good Communist" Comrade Liu Shaoqi made use of this piece of jargon, he demanded that every Communist Party member: "Even when he is working on his own without supervision and is therefore in a position to do something bad, is just as 'watchful over himself when he is alone.'" In the period of the revolutionary war and in the 30 years since the founding of the PRC, many facts tell us that normally, when a party member violates discipline, he is not engaged in collective activities, or being watched by people everywhere. A party member violates discipline when he leaves the collective, when he carries out a task alone or when he is temporarily not under the supervision of the organization and his comrades. This tells us that under the latter conditions, it is all the more necessary for our party members to have firm revolutionary conduct and consciousness in observing discipline. Otherwise, it is easy for us to do something wrong. Exactly for this reason, we should strengthen ideology, consciousness and organization discipline training and cultivation so as to enable our party members to act the same whether alone or in living in the collective and to act the

same way whether they are free of supervision or whether they are being supervised by the organization or the comrades. In the Ming dynasty, Yu Qian wrote a poem "Song of Limestone." The poem said that people should be like limestone, which is not afraid of being ground to dust although it is hammered thousands of times and burned. As a result, limestone keeps its whiteness and purity. We communists can do not only that, we should be able to do better.

3. Self-examination. That means, it is necessary to master Marxist-Leninist weapon of criticism and self-criticism. Just as every day we wash our face and sweep the ground, we should always examine our conscience, see if we have performed acts and said things which violate party discipline and in an open-minded fashion ask for and listen to the opinions of others and welcome the supervision of the organization and the comrades. Whenever we discover our shortcomings and faults, we should determinedly correct them at once and should absolutely never shield them. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" passed by the 6th Plenary Session of the 11th CPC Central Committee is an example of the communists' being practical and realistic in carrying out self-criticism. "It is not easy to rectify the party spirit, but it is even more difficult to carry out self-examination." When Comrade Chen Yi was still alive, he had a deep understanding of this problem. In his two poems "Qigu: The Hands Do Not Extend" and "Revealing My Mind on My 63rd Birthday," he talked of the proper attitude one should have in self-examination. What he said were words from the bottom of his heart. "Whenever I discover my mistakes, I am delighted and I am enlightened when I have painstakingly corrected them," "the best policy is to have courage, correct the mistakes and march forward again." ("Selected Poems and Songs of Chen Yi," People's Literary Publishing House, pp 89, 328, 330) When we carry out self-criticism, we should have such an attitude.

Make persistent efforts to know the rules, be watchful over ourselves when we are alone and criticize ourselves. In this way, we cannot feel that we are incompatible with the party's discipline and are unaccustomed to it. On the contrary, we can take the observance of discipline for granted and gradually form a habit so that it comes naturally to us. In this way, we can march from the realm of necessity to the realm of freedom.

At present, we are building a high level of material civilization. We should also strive to build a high level of socialist spiritual civilization. "Observance of discipline" is an important content in building a spiritual civilization. Lenin said: "Every new social order demands new relations between man and man, a new discipline.... With the beginning of the socialist revolution, discipline must be built on entirely new principles; it must be a discipline of faith in the organizing power of the workers and poor peasants, a discipline of comradeship, a discipline of the utmost mutual respect, a discipline of independence and initiative in the struggle." ("Collected Works of Lenin," Vol 27, p 481) In our building of socialist spiritual civilization, it is necessary to establish and observe such discipline. When there is such discipline and when all of us observe such discipline, we can have normal party political life and normal political life in the entire state, we can have a stable and united political situation and good social order, we can fully promote the creativity and initiative of all the people and we can make the people and all the comrades of the party bravely march with one heart and one mind in the direction of building a modernized socialist state under the unified leadership of the Central Committee. Thus, Communist Party members should be the first to achieve what we ask the masses to achieve and the Communist Party members should resolutely not do what we ask the people not to do. In other words, if the Communist Party members want to be the vanguard of the construction of spiritual civilization, they must first of all strictly observe party discipline.

The 12th CPC National Congress has sounded the bugle call to create a new situation in all fields of socialist modernization. In order to more vigorously lead the people of the entire country to implement this magnificent program in the new period, our party will carry out an overall rectification of the work style and organization of the party. One of the important issues in party rectification is to further strengthen the party members' sense of discipline and sense of organization. I am an old member of the party, I am old and ailing like a candle flickering in the wind, but my heart is as stout as ever and I am unwilling to lag behind. I am willing to accept an overall examination of the party together with other comrades of the party. In addition, I will, in accordance with the demands of the new party constitution, continue to strengthen the study of theory and training of party spirit so as to uphold my revolutionary integrity in my later years and make myself worthy of the name of a Communist Party member. In observing party discipline, I am willing to encourage and supervise and be encouraged and supervised so as to strive together with other party members to play an exemplary role in observing discipline.

HAVE LOFTY IDEALS, GOOD MORALITY AND KNOWLEDGE, OBSERVE DISCIPLINE

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 11-15

[Article by Jia Chunfeng [6328 2504 1496]; passages within slantlines published in boldface]

[Text] In his report to the 12th CPC Congress, Comrade Hu Yaobang raised socialist spiritual civilization with communist ideology as its core as an important characteristic of the socialist system and strategically expounded the position and role of building spiritual civilization in the building of socialism. At the same time, he profoundly elaborated the two aspects of building spiritual civilization, that is, the dialectical relations of cultural and ideological building. This undoubtedly has great significance on the theory and practice of scientific socialism.

Like social civilization, spiritual civilization is a historical process of continuous development. By civilization, we mean the progress level and state of human society, including the two component parts of material civilization and spiritual civilization. We often talk about developed education, prosperous science, flourishing culture, and people's high political consciousness, firm belief and ideals, lofty morality and sentiments, devoted spirit, enhancement of sense of discipline and so on. These are all the manifestation of spiritual civilization. Before the emergence of the socialist system, spiritual civilization under the three kinds of social systems--slave, feudal and capitalist--were divided into class by private ownership and society and was restricted by the existence of exploitation. Therefore, it is inevitable that they have their historical and class limitations. Socialist society is a completely new stage in the development of human history. Under the socialist system, we are not only capable of inheriting all the outstanding achievements of culture and social morality of the past, but also capable of establishing an entirely new spiritual civilization which is fundamentally different than that of any former period. To sum up, this new type of socialist spiritual civilization is to train and bring up socialist new people with revolutionary ideals, morality, discipline and culture, among which revolutionary ideals are the spiritual mainstay, revolutionary morality is the norm, revolutionary discipline is an indispensable guarantee and culture is an important condition. The close integration and mutual complement of these aspects commonly indicates the requirements of the basic economic and political system of socialism on the political consciousness, spiritual state, moral features and cultural cultivation of its social members.

/The spiritual state of our country and people is judged, first of all, by whether or not our people have revolutionary ideals and are encouraged by these ideals, and vigorously and effectively engage in the building of the socialist cause./ Ideals are people's social political standpoint and their world outlook centrally manifested in their fighting objective. It shows that people cherish and yearn for the glorious future. Different eras and classes have different world outlooks and people have different ideals. The proletariat is the most advanced and revolutionary class in human history. Communism--the great ideal of the proletariat and its vanguard, the communist party--reflects the inevitable trend of the development of history. Therefore, it has the greatest calling and mobilizing strength. The great ideal of communism will surely be attained. This is an objective law independent of man's will. But the road toward communism is arduous and tortuous. Whenever the revolutionary cause of the proletariat suffers temporary setbacks and needs most the encouragement of revolutionary ideals, there are usually some weak-willed people who waver in communist ideals and bring about a sense of illusion. This is a repeated phenomenon in the history of revolution. Meanwhile, historical facts teach us again and again that those who give up communist idealism at a time when the revolution suffers setbacks and fall behind the revolutionary ranks will certainly be eliminated by the historical trend. Only by adhering to revolutionary ideals and inspiring revolutionary enthusiasm can we once again follow the revolutionary cause and march toward the glorious future. Whether in revolutionary success and development or during temporary revolutionary setbacks, our veteran party members and revolutionaries adhere to communist ideals and have great determination, are fearless of sacrifice, plunge through fire and water and fight heroically to attain this ideal. Today, inspired and encouraged by this great ideal, the broad masses of party members and people are also using their creative work and labor to do their little bit to build communism. Historical and present facts have effectively proved that communist ideals are the powerful ideological strength for the victory of the people's liberation cause, and are the spiritual mainstay of the solidarity and militancy, hearts and minds of our people and country and the revolutionary soul fostering the continuous development of our socialist cause and opening up a bright future.

/Morality is closely related to ideals; to have ideals is to have morality. A country full of revolutionary idealism is bound to have revolutionary morality and customs. A man fostered with revolutionary ideals will consciously conform his deeds with revolutionary morality. On the contrary, those with illusions usually forfeit morality./ Ideology, principles or morals are not without foundation. Their emergence and development all have a profound social economic root. Communist morality is determined by the class status, class nature and historical tasks of the proletariat. It is impossible to expect every social member to be a communist at the present stage. But our socialist system is based on public ownership which regards the highest stage of communism as its objective. Therefore, we must energetically propagate and propose that the whole society use communist morality as a norm of action for adjusting relations between men and between man and society. It is also imperative to educate party and league members and all advanced elements with communist morality and through them educate and influence the broad masses. The basic principle of communist morality is the principle of collectivism loyal to the communist cause; the devoted spirit of serving the people and a communist labor attitude. This principle expects people to insist that the interests of the people and the socialist motherland be superior to the interests of the individual, and whenever they contradict, the interests of the individual should unconditionally be subject to the interests of the people and the state. This principle also demands that people unite as one, help and love each other, fight and advance together, respect and enjoy comforts after others, find pleasure in helping people and sacrifice one's own interests for the sake of the people, masses and public in their work, labor and social life. All these have manifested in various respects the principle of collectivism that people should adopt toward the interests, cause and activities of the whole.

Morality covers a lot of ground; it includes professional morality of various trades and professions. Engels once pointed out: "As a matter of fact, each class and each trade has its own morality." ("Selected Works of Marx and Engels," Vol 4, p 236) Professional morality is a summarization of the norm of behavior of people's own peculiar work and labor engaged in a certain profession. This type of morality has the characteristics of certain concrete professions or trade activities. Different professional morality reflects the professional psychology, habits, tradition and responsibility formed according to different professions and trades and represents certain differences of moral behavior and consciousness caused by different professions and trades. Professional morality is related to the development of the division of labor in society and has a long formation and developmental history. In our country, professional morality is a necessary complement and concreteness of the principle and norm of our revolutionary morality. In the past few years, along with the work of bringing order out of chaos in the field of moral ethics in our country and along with the development and restoration of the fine tradition and work style of our party and country, professional morality in various trades and professions is being established and perfected under the unified guidance and influence of the principle of communist morality, such as service regulations in service trades, village rules and regulations in rural areas, scientific moral standards for scientific and technological workers, regulations for literary and art workers and so on. Our socialist modernization cause is a cause of a whole that is complicated and coordinated. With its different methods, each profession joins with the entire socialist modernization cause and serves the entire socialist cause and the people. Society has its special requirements for the various professions. Professional morality determines the specific responsibility the people of different professions must undertake in the entire socialist modernization cause. This is favorable for impelling the sense of honor and dedication of people to hold fast at their posts, to bind people to observe certain professional order and discipline, to encourage people to unite and cooperate, perfect their skills and gain professional proficiency, and to raise their working capability and efficiency, and labor techniques and efficiency. Facts show that under the guidance of the principle of communist morality, proceeding from the needs of the profession and meeting the concrete conditions and accepting the capability of the profession, and by adopting easy and effective, vivid and vital methods, the professional morality formulated and perfected by the various trades and professions has and will play a greater role in developing socialist spiritual civilization, thus further attaining the stability and unity of society and doing a good job in the building of all fields of socialist modernization.

/Revolutionary discipline is a manifestation and guarantee for revolutionary ideals and morality. There is unity in having ideals, morality and observing discipline, whereas forfeiting ideals, degenerating morality and violating the law and discipline are also grouped together./ This is a truth of real life. Anyone who sabotages social morality must be censured by public opinion and when the case has developed to a certain seriousness, he must be punished according to state law and discipline. Legality, discipline and morality belong to the category of the norm of behavior. Morality depends on public opinion, people's faith, traditional customs and educational influences to maintain and exert its role; whereas state law and discipline depend on administrative execution and compulsory means to maintain and exert their role. These two roles complement each other in society; neither can do without the other. The realization of revolutionary ideals and the exertion of revolutionary morality are both guaranteed by law and discipline. Our party, army and people have always had the tradition of observing discipline. What do the unity and powerful fighting capacity of our party and the implementation of the party's principles and policies depend on? One of the most important factors is firm discipline. Our fine tradition of observing discipline was seriously sabotaged in the 10 years of internal disorder. The building of socialist spiritual civilization carried out at present is precisely for the purpose of resuming and promoting this fine tradition. There is party, political and military discipline; there is discipline for each factory, production team, shop, school, leading organ and mass organization, and there is also professional discipline for all trades and professions. Freedom and discipline are unity of opposites. This is also the case with right and duty; none of them must be separated. Our people enjoy freedom and rights within the limits of the constitution and law, but they must also be consciously bound by discipline. Only in this way can the whole society be a coordinated whole unit, can all parts of society organically cooperate with each other and form into a fine production, work, study and life order and ensure the smooth progress of the building of socialist modernization.

/Knowledge is an important aspect in the substance of socialist spiritual civilization and also an important condition for forming scientific ideals and belief, lofty moral sentiments and a conscious sense of discipline./ We cannot build socialism or attain the lofty ideal of communism by relying on illiterate or semi-illiterate people. Long ago Engels said that the socialist cause of the proletariat needed lawyers, "and also doctors, engineers, chemists, agronomists and other specialized personnel, because we must not only administer the political apparatus, but also administer the entire social production. Therefore, what we need is not beautiful words but abundant knowledge." ("Collected Works of Marx and Engels," Vol 22, p 487) Marx and Engels specially stressed that only by developing education can we train people who are developed in an all-round way. Lenin pointed out: "We must build socialism by retaining all the culture left over by capitalism. We must retain all the science, technology, knowledge and art. Without these, we cannot build communist society." ("Collected Works of Lenin," Vol 4, p 348) Stalin once sneered at the innocent mood of praising their own illiteracy and sharply pointed out: "I hold that we simply cannot make any progress without eliminating these savage and uncivilized phenomena and the savage attitude toward science and learned people. The working class cannot genuinely become masters of their country if they do not free themselves from illiteracy, bring up their own intellectuals, master science and manage the economy according to scientific principles." ("Collected Works of Stalin," Vol 11, p 64) The building of socialist modernization has put a higher demand on the people's level of cultural and scientific knowledge. Without constantly raising the level of scientific knowledge of the whole society, it will be impossible to attain the grand objective of building modernization, it also will be unfavorable to the formation, consolidation and development of scientific ideals and belief and revolutionary morality. With knowledge, people can thoroughly understand the law of social development, consciously master scientific world outlook and methodology and be developed in an all-round manner. To be sure, while developing culture and raising the educational level of the people, we must adhere to the guidance of Marxist scientific theory, and eradicate the influence of capitalist, feudal and reactionary decadent culture. In the light of class struggle still existing within certain limits in our society, class struggle in the international field will inevitably find expression in our country. The serious cultural smuggling is a phenomenon not to be ignored. The decadent culture of capitalism, such as films, cassettes, periodicals, photographs, records and so on with brutal, reactionary, degenerate and obscene substance is bound to contaminate our social mood, poison the people's souls and cause revolutionary idealism to waver, corrode revolutionary morality and disintegrate revolutionary discipline. To resist the corrosion of capitalist and reactionary culture is necessary in order to safeguard and develop the basic economic and political system of socialism and build socialist spiritual civilization and enable people to have ideals, morality, culture and to observe discipline.

In our socialist society, the system of exploitation no longer exists. In the means of production, public ownership has replaced private ownership. We have attained the principle of distribution according to work and the fundamental interests of the whole people coincide. This determines that our people can increasingly form common revolutionary ideals, morality and discipline and consciously develop culture in the whole society. But this does not mean that the establishment of the basic economic and political system of socialism will enable the whole society and every member of society to spontaneously have such common revolutionary ideals, morality and discipline and spontaneously maintain it forever. In order to enable more and more members of society to become laborers with ideals, morality, culture and who observe discipline, we must consciously carry out a series of painstaking and untiring efforts when confronting new conditions and problems emerging at any time. We must clarify muddled ideas and erroneous understanding of some people in their ideals, morality, discipline and culture.

/It is necessary to understand the relationship between adhering to communist ideals and morality and carrying out the present economic policy./ Since the 3d Plenary Session of the 11th CPC Central Committee, we have adopted the policy of opening to the outside world and enlivening the domestic economy. Facts have proved that by carrying out this policy, we have achieved marked results in vigorously developing our national economy. We must fully affirm this achievement. But, we must also be fully aware that "opening" and "enlivening" has put forward a new question on adhering to the education of communist ideals and morality. For example, some people say: "Idealism is vague and remote; it is better to be practical!" To these people, preaching idealism is but empty words; it is not as good as having benefits, such as bonuses, housing and furniture. Is communism remote and an empty thing? As a social system, the complete realization of communism is, of course, a future matter. But as a movement, it started long ago with the founding of our party and the consequent new democratic revolution carried out throughout the nation. At present, we have developed to the initial stage of communism--socialist society. The work and life of each of us are closely related with the gradual realization of communist ideal. From this point of view, communism is not a vague and remote thing that is within sight but beyond reach, but closely linked with the destiny of each family and individual. With regard to "benefit," we certainly do not reject personal benefit. We have always stressed giving consideration to the state, collective and individual. But here we have a problem of how to correctly put in the relationship between present and future, individual and society, and the state, collective and individual. If we reject communist ideals and engage in "everything for the purpose of money," advocate the so-called "people die for wealth, and birds die for food" and infuse our minds with egoism, then we will lose our ability to resist sugar-coated bullets, confuse our objective and forfeit our revolutionary will and fighting strength; all kinds of unhealthy tendencies and dishonest practices will expand and the phenomena that only existed in the old society will be revived. In this way, the whole society forfeits its revolutionary vigor and vitality. How then can we guarantee the socialist orientation in the building of modernization?

Our present economic policy, formulated and executed under the guidance of communist ideals and world outlook, is a concrete step and measure for attaining the great objective of communism. These two do not contradict but complement each other. We should neither immediately implement policy for the higher stage of communism, just because we practice the communist ideological system, nor abandon communist ideological education because we are implementing the present economic policy.

/It is necessary to correctly handle the relations between discipline and creativity./ With regard to enhancing discipline, some people think that it binds people's creativity and is incompatible with people's initiative and enthusiasm. Marxism holds that man's creativity and discipline are closely connected--"perfect when both combine and suffer when both depart." It is inevitable for man living in a certain society to have this or that kind of social relationship with other people. In the course of changing the objective world, if a man needs freedom to exert his initiative and creativity, there must be certain bounds for his words and deeds; that is, there must be certain discipline to restrict any improper freedom. Otherwise, people's social activities will not be ensured, their genuine creativity and initiative cannot be fully exerted or may even be offset and strangled. Discipline exists in every social system. It has different nature and conditions in different social systems. Just as Lenin said: Any new social system requires a new relationship and discipline between men. From the beginning of the socialist revolution, discipline should be built on a new basis. This is a discipline of comradeship, of each respecting the other and of exerting initiative and creativity in the midst of struggle. Some people feel it difficult to understand the practice of regarding revolutionary discipline as the main content of socialist spiritual civilization. In fact, the realization of revolutionary ideals requires that the potential wisdom and capability of the people be tapped to the greatest extent and that their initiative, creativity and devoted spirit be brought into full play. It will be impossible to attain the grand objective of communism without this initiative and creativity, which is guaranteed by organizational discipline. Therefore, whether our sense of discipline is firm or not is an important part in judging a man's spiritual mood; and whether our social discipline is strict or not is another important aspect in measuring the state of spiritual civilization of a society.

Socialism is a movement that advances toward communism. This movement cannot be conducted by merely increasing material wealth. We must concentrate forces in developing socialist economy and do a good job in the building of material civilization. But we cannot set sights only on material and not on man. In the final analysis, the purpose for developing our socialist economy is for man and not material. It is absolutely true that material wealth can make people happy, but it can also degenerate them. The crux of the matter is to do a good job in building socialist spiritual civilization and make great efforts to enable our people to have ideals, morality, culture and to observe discipline. This is a lofty task. All our party members, league members, advanced elements and members of society must consciously shoulder this historical task. Let us start now and from ourself and influence and lead the people aroud us to make the greatest efforts in building a high level of socialist spiritual civilization.

EXCERPTS FROM SPEECHES AT A FORUM ON STUDYING THE DOCUMENTS OF THE 12TH CPC NATIONAL CONGRESS

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 16-28

> [Text] Editor's note: On 24 and 25 September, our journal invited some comrades of the theoretical, scientific, educational and literary and artistic circles to a forum on studying the documents of the 12th CPC National Congress. From this issue on, we will publish excerpts of the speeches by the participants. This issue will conclude all speeches by the comrades of the economic circle.

Lu Jiaxi [4151 0857 6932]: "Strengthen Unity and Coordination, Do a Good Job in Scientific Research"

The socialist scientific cause is an important component part of socialist spiritual civilization. Development of our scientific, cultural and other causes will not only greatly help along the building of socialist material civilization, but will also remarkably enhance our level of spiritual civilization. Therefore, every person working in our scientific research departments is a builder of the socialist spiritual civilization.

How to more strongly push ahead the scientific cause under the socialist system? To achieve this, we can only depend on our superior socialist system and our socialist consciousness. We must unite as one, share work and cooperate with one another under the unified leadership of the party, thus giving full play to our efficiency with our limited manpower and material resources.

Now, our number one headache is the disputes over trifles among our comrades and the practices of shirking responsibility, pushing it onto one another. This is an obstacle to the realization of our common goal and a negative factor which goes against communist ideology. In the case of the Chinese Academy of Sciences, endless haggling and shifts of responsibility are reflected in two areas, concerning external and internal relations, respectively.

Let us deal with the external relations first. Everyone knows that our country's professional scientific research contingent is composed of five different sectors—industry, national defense, local scientific research bodies, institutes of higher learning and the Chinese Academy of Sciences. In the 1950's, these five sectors had cooperated well. At that time, with Premier Zhou as our chief commander, Chairman Mao as our pilot who devised strategies in light of the overall situation, and Comrades Chen Yi and Nie Rongzhen as our direct leaders, successively, all of us worked with one heart and one mind and achieved great successes. Why could we quickly reap remarkable results in tackling the grand project of "A bomb, H bomb and satellite" in the early 1960's? I think that this was mainly because all of us had united and pooled our efforts under a common aim instead of disputing over trifles and pushing responsibility onto one another, thus dispersing our force. This was really a good lesson which deserves to be learned. However, the "Great Cultural Revolution" destroyed this trend of unity and coordination. Today, when we are making our efforts to create a new situation in all fields of socialist modernization, we should try our best to resume the fine style which was prevalent at that time.

Ownership by the department cannot be adopted in scientific research. A single department or unit, for example, a scientific research unit or an educational unit or any other department, cannot possibly do the whole job ranging from basic theoretical studies to application, popularization and mass production of research results. Only when the five sectors make concerted efforts can each individual, each department and each system effectively play its own role in the collective division of work and thus overcome difficulties one after another. If we do nothing about the practice of endless haggling and shifts of responsibility and retain ownership by department, we can hardly achieve anything in our scientific research. I truly found that in order to solve this problem, we must strengthen the building of socialist spiritual civilization in our contingent. And, first of all, our comrades who are holding leading posts should arm themselves with communist ideology. Although we are facing problems concerning the system and some defects existing in the working system and regulations, in specific policies and in other fields, we should not blame all problems on the system. Without the guidance of a good ideology, even a good system can hardly work. Although we oppose the tendency to effect the transition to communism prematurely, we should still always advocate communist style, communist morality and communist ideology.

Now, let us talk about the internal relations. In a meeting, Comrade Hu Yaobang said: The Academy of Sciences should mainly be run by you scientists. All of you should pool your efforts. This is a problem which really deserves attention. According to my understanding, such joint efforts concern several aspects, namely, technical research, professional work management, administration, party work and ideological and political work. If all these works do not center around a common aim and are carried out separately, the practice of disputing over trifles and pushing responsibility onto one another will prevail. Of course, these aspects are different from one another in terms of the division of work, their specializations and the importance of their roles; and these are differences between individuals in their ability. This is a normal phenomenon. However, all departments and all individuals have a common goal, a common ideal and a common guiding ideology, and all our works center around a common key link. It is this common faith that links us together to fight for victory. I think that in order to solve the problem of disputing over trifles and shirking responsibility, all of us must first strive for our common goal and arrange our work around the central task; second, we must courageously shoulder heavy loads and tackle key problems, or willingly play minor roles to assist main roles to complete key tasks; and third, we must respect, support and help one another. In brief, one of the principal roles of our ideological and political work is to function as the bond among our comrades and a catalyst in our cause.

Peng Peiyun [1756 3805 0061]: "Education Is an Essential Prerequisite for Building Material and Spiritual Civilization"

It was pointed out in the report to the 12th CPC Congress that education and science are key points of strategic importance in economic development as well as an important aspect of socialist spiritual civilization. This was the first time in our party's history that such importance was attached to education. We comrades working on the front of educational work, warmly hail the correct program laid down by the 12th congress and are determined to strive to create a new situation in the educational cause.

In the last few years, more and more comrades have acknowledged the position and the role of education in socialist modernization. So far, however, some comrades still attach importance to economic work alone while overlooking education, or just schedule educational development behind economic development. They do not know that although educational development is restrained by economy, education may, in its turn, have a tremendous reaction on economic development. From a long-term point of view, the success or failure of education will have an important bearing on the overall situation of the socialist modernization construction and on our nation's future. Unaware of this, we will inevitably commit historical mistakes. The report to the 12th CPC Congress stated: "The key link to the four modernizations rests on the modernization of science and technology." And education is the foundation for the cultivation of scientific and technical personnel. In order to develop the economy and improve economic returns, we need an adequate number of skilled workers, scientific and technical personnel and administrative staff with socialist consciousness. And, in order to build the socialist spiritual civilization, we need a massive contingent of intellectuals. All these rely on the popularization and enhancement of education. Today, in investing "expenditures" in education, we are just aiming at cultivating a labor force of high quality, so that this force will be able to play a greater part in production in the future. As the most fundamental capital construction of a country, education needs a long turnover cycle. Therefore, it must go ahead of other undertakings in our socialist construction and prepare a reserve of qualified personnel during the first 10 years for a new economic restoration in the next 10 years.

The report to the 12th CPC Congress pointed out that the popularization of education is the essential prerequisite for building material and spiritual civilization. This statement touches the core of the problem. To raise the scientific and cultural standards of our whole nation, we must start with primary education. As long as primary education is not popularized, new illiterates will keep on emerging. If the quality of primary education fails to improve, the quality of secondary and higher education will inevitably be affected, and thus a vicious circle within the educational field will take shape. As the popularization of education is a "matter of prime importance" which has a direct effect on the destiny of the whole nation, it must be dealt with conscientiously.

In order to adapt to and serve economic construction more effectively, our educational work must undergo readjustment and reform step by step and in a planned way, and a socialist educational system with Chinese features must be gradually established. We are now planning to concentrate our efforts for a while on educational work in rural areas. Our country has a population of 1 billion, of which 800 million are living in rural areas. Since agriculture will be the strategic key point of economic development in the next 20 years, how to adapt educational work in rural areas to the needs of rural socialist construction and cultivate a new generation of peasants with socialist consciousness, culture and production skills is a very important problem which badly needs to be solved. In the past, we did not pay enough attention to the studies of educational work in rural areas. This is a shortcoming which should be overcome. At present, our major task is to vigorously popularize primary education and carry out structural reform of secondary education. The student recruitment system and the graduates distribution system in those institutes of higher learning and secondary technical schools which mainly aim at meeting the needs of rural areas should also be reformed, so that students from rural areas can find their way back to their hometowns.

The readjustment and reform of higher education involve very arduous tasks and very complicated problems. We are considering concentrating our efforts on the following matters: working out the plan for cultivating qualified personnel, and readjusting various proportions so as to adapt to the needs of the economic and social development; setting up different systems of and various requirements for higher education, adopting different forms of running schools, actively developing unconventional educational forms such as television schools, broadcasting schools, correspondence schools and so on; reorganizing liberal education so that it can help better in economic construction, political work and the building of spiritual civilization and can provide a contingent of revolutionary, young, educated and professionally competent cadres.

All schools of various categories at various levels throughout the country must further improve their teaching quality and adhere to the principle of all-round development in moral, intellectual and physical education. We must, particularly at present, emphasize educating the vast number of students with communist ideology so as to enable them to resist the corrosion of bourgeois ideology, see through erroneous ideas of every description and thus grow into a new generation of communists in the new situation when the policy of opening the door to the outside world and enlivening the economy at home is being carried out. We educational workers must fully realize that we are shouldering an especially glorious and important mission of providing youngsters with communist ideological education and that, being both Red and expert, we must impart knowledge as well as educate people.

In order to create a new situation in educational work, we must also enhance our revolutionary vigor, improve our efficiency, go deep into the reality of life and work in a down-to-earth manner. At the same time, we hope that the party and government leading comrades of various departments in various places can put educational work on the important agenda, just as they have done with agriculture, energy production and communications, and seriously investigate and solve various problems existing in education work. At present, they should particularly assist in reorganizing the leading bodies of the educational system; select those "experts" who are enthusiastic about and are familiar with educational work, to hold the leading posts; try every means to increase educational funds and improve the conditions of schools; further implement the policy toward intellectuals, enhance the social status of teachers and improve their living and working conditions so as to more effectively mobilize the initiative of the vast number of teaching and administrative staff. Since our country's educational cause is large in scale, and since the state cannot take care of everything, we have to mobilize the whole society to engage in the job. At the same time, we must work out the relevant principles and policies and some basic rules and regulations so as to ensure that all areas of society can play more active roles under the unified planning of the state.

Zhang Guanghou [1728 1684 0624]: "Cultivate Scientific and Technical Personnel With Communist Ideology"

In his report to the 12th CPC Congress, Comrade Hu Yaobang set the building of a high degree of socialist spiritual civilization as a strategic guideline for socialist construction. This was a very correct and necessary decision. Here I would like to talk about my understanding of the building of socialist spiritual civilization from the viewpoint of the cultivation of qualified personnel.

The key to the four modernizations is modernization in science and technology. To fulfill this task, we need to cultivate a vast number of scientific and technical personnel. I am a researcher in basic mathematical theories. Is it enough for me to just do a good job in my own field? In view of the course of struggle of some accomplished mathematicians and my own experience, I truly realize that one's accomplishments are the fruits of many factors. These factors can be generally classified into three aspects, namely, moral, intellectual and physical education. I am not going to talk about the role of physical education here. As far as morality and intelligence are concerned, all our accomplished predecessors were not only equipped with an enviable and rich store of knowledge, but also with moral integrity, which is worth being followed. In fact, it was the latter which enabled them to build their rich store of knowledge and to make great contributions. It is one-sided or even wrong to simply attribute their achievements to chance and their gifts such as intelligence, talent and luck. Take me as an example. Is it simply because I have had a rather solid foundation in mathematics that I have been able to engage in mathematic studies and thus have achieved certain successes? The answer is no. I was born into a worker's family and led a very poor life in the old society. I began to work as a child laborer in the Kailuan coal mine when I was 8 or 9 years old. At that time, I never thought about or, to put it bluntly, could not possibly think about studying mathematics. My highest goal at that time was nothimg more than to become a technical worker in the coal mine. However, my poor living in the old society led to my hard-working spirit and tenacious character. After liberation, I had the opportunity to go to junior secondary school. Although I began to be interested in mathematics then, I did not think about taking mathematic studies as my career. I had only an idea in my mind: I am determined to devote my life to the party's revolutionary cause under the party's guidance; I will do anything with which the party entrusts me. It was at that time that I laid down a solid foundation in politics and began to link my destiny with the party's cause. Only when I went to senior secondary school did I make up my mind to devote my life to mathematics research for my motherland. But, on the other hand, I was also prepared to respond at any time to any call of the party. I think that it was during the above three periods when I laid foundations in various aspects. One's path is by no means smooth. Mishandling at a single link may have serious effects on one's lifetime cause. When the Lin Biao and Jiang Qing counterrevolutionary cliques were running amok, I bore pressure in my academic research due to the unfavorable political climate, as well as having faced seriously difficult working and living conditions. The spiritual support which spurred me to carry on scientific studies was the communist ideal. I understand that the party has paid very much for cultivating me. So, I must not spend the people's money freely and just let my life slip idly by. My own course of growth is a good example to demonstrate the important role of socialist spiritual civilization in the cultivation of a qualified person. In order to become a qualified person in the field of science and technology, one has to devote considerable effort to strengthening scientific and technological studies as well as improving political understanding.

No matter what career in which we are engaging, the ideology guiding our work must be nothing other than communism. Personal fame and gain, for example, can be an effective incentive to temporarily push one to work hard in scientific and technological fields. However, the effect of such an incentive cannot be sustained and is limited or even dangerous. There are numerous examples to illustrate the bitter experiences in this respect. Because the socialist system has been founded and developed in our society under the communist ideological system, any nonproletarian ideology existing in our minds can actually conflict with reality. If we uphold these wrong things instead of overcoming them with communist spirit, we will surely run into snags and be foiled everywhere. Thus, we will not only take to evil ways politically, but will also be utterly disheartened since we will always suffer setbacks. Only by arming ourselves with communist ideology can we ever keep our revolutionary spirit young.

Li Yanjie [2621 3601 2638]: "Educate the New Communist Generation in Proletarian Love"

To build a high level of socialist spiritual civilization is a common task of the whole party and all the people of the country. Teachers should be active propagandists of spiritual civilization and communist teachers should be more active and spontaneous propagandists because, first of all, we are communists and, second, teachers. A teacher should possess the morality of a teacher and love his pupils and teach them knowledge and cultivate them, that is to say, he should cultivate a new communist generation with proletarian love and get them to understand that the glorious cause is to liberate all mankind and that the best ideology is to fight all his life for the cause of communism.

A communist teacher should not take teaching as a means for making his living. He is a builder of spiritual civilization devoted to the cause of communism. Having this understanding, he will perceive the sense of responsibility and will not only sit in his study writing books or teaching in the classroom, but will also be deeply rooted among the youth, attaching importance to their healthy growth. As I told the life stories of Lu Xun and Wen Yiduo, I was frequently moved by their spirit of selflessness in the educational cause. They were illuminating, like a burning candle, the road to advance for youth. They could do it in the old society, which was an abyss of darkness, but why can we not do it in the socialist society? I am determined to take them as examples and strive to do more work for the people. At present, apart from teaching in the classroom, I make public reports for the youth in order to make close contact with the young people and to absorb political nourishment from them.

In recent years, I have received several hundred youths who came to visit me and 7,000 letters from them. Through these contacts and correspondence, I have come to realize that although their hearts were heavily broken during the 10 years of turmoil, they are never demoralized and most of them are willing to follow the party and are ready to accept ideological education in communism. Actually, the splendor of communist thought is shining among the advanced youth. For instance, Zhang Jun from Shaanxi, only 19 years of age, seeing a powder magazine burst into flames, rushed to the fire on four occasions within 5-6 minutes and saved 86 bags of detonating powder. Feng Jianhu, a telephone office worker from the railway department, is 20 years old. One day, as he was working beside the railway, he suddenly discovered a small girl picking out unburned coal from among cinders along the track. Meanwhile, a train was rapidly approaching the girl and was only 40 meters away. At this critical moment, he raced against the train, took the child in his arms and came rolling away from the track together with her. Thus, a life was saved from the jaws of death. People consider him a figure like Ou Yanghai.

Chinese youth possess revolutionary tradition. In particular, since the 3d Plenary Session of the 11th CPC Central Committee, encouraging change has taken place in the political ideology among the youth. Perplexed at the 10 years of internal disorder, they have woken up and after pondering things and making comparisons, have come to realize that the CPC is great and have strengthened their ideal and faith in communism. While some people have lost confidence in the rectification of bad party style, there is a student of 18, full of enthusiasm of fighting for communism, who joined the CPC. He expressed in unequivocal terms: "I join the party because vice still exists in the world. Why would we need the party if the whole world were bright?" This is the "fresh blood of the party body," the new and healthy force that is capable of waging uncompromising struggles against vice in the party.

As teachers and gardeners devoted to cultivating the new communist generation, we should try by every possible means to contact the youth and be their bosom friends; the common things existing between them; educate them by having a definite object in view; discover their positive factors and encourage them to advance. In the past few years, in connection with teaching classical literature, "making the past serve the present," I have inserted moral education in intellectual and aesthetic education. I strive to adopt the method of "what is taken from the youth is used in the interest of the youth." I cite the advanced deeds of the youth to compile books, to make reports and tc encourage the youth in the school and in society to learn from each other.

We should hold high the banner of the 12th CPC National Congress and unite more comrades with the view of doing a good ideological job for the youth. Recently, the All-China Federation of Trade Unions and the Beijing Municipal CYL Committee organized youth friendship training courses, and I am responsible for art education. More than 100 propagandists from Beijing and other localities of the country joined these two training groups. Since the study, all of us have made certain improvements ideologically, theoretically and in the art of lecturing. There is a big number of socialist civilization building lecturers who will become friends of the youth and are to be welcomed by them. We are also going to run well self-study universities under the party so that the present 250,000 students in training courses will become more socialist-minded and professionally proficient and more active builders of socialist spiritual civilization.

Xu Xing [1776 5429]: "Building Socialist Spiritual Civilization Corresponds to the Desire of the Party and People"

We are studying the 12th CPC Congress documents. In the study, I profoundly perceive that politically and theoretically, the party Central Committee has thoroughly discussed the significance, role, content and key point of building socialist spiritual civilization and the important measures for promoting the building of socialist spiritual civilization. This has made our minds clearer and our vision broader. Now, I initially review my study experiences in the following three points:

1. Comrade Hu Yaobang clearly pointed out in his report to the 12th CPC National Congress: "Socialist spiritual civilization is an important characteristic of socialism and an important manifestation of the superiority of the socialist system." I think that these two phrases can be considered

as a key point of important significance for building socialist spiritual civilization. The expositions on building socialist spiritual civilization by the party Central Committee have enriched the theory of scientific socialism and have defined the core of communist ideology for socialist spiritual civilization. The elimination of the system of exploitation and the establishment of the public ownership system for the means of production, distribution according to work, the development of national economy according to plan and proportion and the political power of the working class and laboring people are the characteristics of socialism. This enables us to have an all-round and complete knowledge. It can be considered that only by completely and thoroughly understanding socialism can we be able to comprehend socialism, socialist spiritual civilization and the strategic significance of building a high level of socialist spiritual civilization in the socialist cause. It is impossible to develop socialism without this spiritual civilization.

2. The strategic policy posed by the party Central Committee on simultaneously building material civilization and socialist spiritual civilization corresponds to the desire and demand of the people as well as to the law of socialist development. Since the 3d Plenary Session of the 11th Central Committee, the party Central Committee has led the people of the country to bring order out of chaos and has carried out a key change in the focus of party work. This has provided the people with a definite orientation, goal, ideal and spiritual power and has aroused the people's enthusiasm and knowledge for creating a new life in the building of socialism. Many advanced figures are seen in all fields. They are characterized by their firm faith in the cause of communism or their spirit of devoting themselves to it, their patriotic and collective spirit of socialism, their communist spirit of sacrificing their own interests for the sake of others; they are so devoted to public service as to forget their own interests, attaching great importance to the public interest and protecting public ownership. This advanced ideology actually exists in our daily life and vigorously affects and changes the concept and spirit of the people, and brings along the whole society. Numerous facts have proved that the building of socialist spiritual civilization accords with the desire of the party and people and is in line with the trend of history.

3. Now, our present task is to earnestly follow the orientation and track provided by the Central Committee and to carry forward more effectively the socialist spiritual civilization cause (including ideological and cultural undertakings) in accordance with the measures and demands put forward by the Central Committee. In this glorious undertaking, we propagandists, theoretical workers, educational workers, scientific workers, literary and art workers, journalists and publishing workers are shouldering very important tasks. Under the leadership of the Central Committee, we should conscientiously study the relations between the building of socialist spiritual civilization and the job of our departments, make clear the demands put to us by the spiritual civilization and understand how we can further improve our work, in accordance with the characteristics existing in the job of our department, in order to make due contributions to socialist spiritual civilization and to effectively avoid the unfavorable factors in socialist

spiritual civilization which might emerge in work, and to resist the corrosive influence of decadent factors. Only thus will we have clearer ideas and under the unified plan of the party, make continuous efforts and strive to cultivate more members of society by converting them into laborers with ideals, morality, culture and discipline.

Luo Guojie [5012 0948 2638]: "Strengthen Education in Communist Morality"

The report of the 12th CPC Central Committee says that communist ideology is the core of socialist spiritual civilization. Education in communist morality will play an important role in the building of socialist spiritual civilization. Under socialist conditions, communist morality is the spiritual link for establishing new relations between the people. Communist morality generally comprises five universal points of significance and the most important standards. First, to wholeheartedly serve the people, that is, to ardently love the people, attach great importance to the people and proceed in all cases from the interests of the people. Second, the communist attitude toward labor urges all laborers to take labor as a glorious task of a citizen and to observe labor discipline in order to make more contributions to socialist construction. Third, to protect public property and to acquire the socialist concept of public property as sacred and inviolable. Fourth, to adhere to science and the truth, to urge people to study hard, to acquire scientific theory and to persist in the truth and to develop it in practice. Finally, to uphold socialist patriotism and internationalism. It urges people to protect the national dignity and national interest, and to link the national interest with the general interests of the whole of mankind. These several standards are indispensable to communist morality.

We stress communist moral education because it is linked to the remolding of people's ideology under socialist conditions. While building socialism, we must constantly improve people's material living standards and, at the same time, we should make our new generation people with ideals, morals, culture and discipline. Only thus can we guarantee that socialist construction will not lose its way. The building of material civilization is an indispensable basis for the creation of spiritual civilization, but on no account must we consider that the building of spiritual civilization is of little importance. Practical life will constantly and clearly show that if the people do not remold their ideology and cultivate lofty communist morality, it is entirely impossible to develop socialist modernization and to advance along the track toward a high level of communism.

The undertaking of communist moral education must be integrated with the practical problems that people are facing in their work, study and labor, and they must be patiently and painstakingly inspired and guided. Only thus can sympathy for communist morality be aroused in the hearts of the people and can they understand the importance of heightening their morality, so that an increasing number of members of society can conscientiously bring their deeds in line with communist morality.

Zhou Taihe [0719 1132 0735]: "Strengthen and Perfect the Economic Responsibility System"

In his opening speech at the 12th CPC National Congress, Comrade Deng Xiaoping called on the whole party: for a time to come, four tasks have to be tightly grasped, and the reform of organs and economic systems must be considered as an important task. The reform of the enterprise administrative system comprises an important part of the whole system reform. In order to arouse the initiative of enterprises and laborers, the system of job responsibility must be implemented in management and administration in state-owned and collective enterprises. In recent years, while implementing the eight character policy of national economic readjustment, restructuring, reorganization and upgrading, the economic responsibility system which has been carried out by the industrial enterprises in responsibility, power and profit, has achieved some results by enhancing the initiative of the enterprises, improving them and raising economic returns. In order to strengthen and perfect it, we hold that at present, the following questions have to be resolved:

1. The enterprises which are implementing the economic responsibility system must, first of all, strengthen planning and administration, must be responsible for the plan provided by the state and must run well the business of the enterprises in accordance with the requirements of the state's plan. Therefore, leading cadres of the enterprises have to acquire economic knowledge, know how to plan and to run the business, first be responsible for running the enterprises well and strive to achieve the best economic returns. Our national economy puts planned economy in the leading role. Enterprises, as grassroots units of economic activity, must completely fulfill the state's plan. Therefore, enterprises must convert the state's plan into their own plan, putting it in the light of their own practical conditions. Only by planning production will we be able to run our businesses well. At the same time, we must also implement the complete plan down to every post at all levels and to every person. That is to say, we must strictly carry out the economic responsibility system. How can we run an enterprise if we entirely depend on the state, do not assume responsibility for the profit and loss or do not stress economic returns? We should employ those who know how to plan and run the enterprises or are specialized in taking "strategic problems" into account. Raw material and fuel sources and product sales volume must also be taken into full account. Naturally, it is impossible to make all decisions by the enterprise in planned economy; it is important that the leading cadres of the enterprise understand the state's economic situation and gain a clear idea of the state's plan and market development and hold themselves responsible to the state. In the fall of last year, Comrade Zhao Ziyang pointed out that in order to implement well the economic responsibility system, it is important to combine the implementation of the economic responsibility system with the strengthening of planning and administration so that the enterprises will be able to operate in the light of the state's plan and the demands of society. The most important experience acquired by the Shoudu Iron and Steel Company in implementing the economic responsibility system is that it arranges production in accordance with the state's plan and requirement, every level

assumes responsibility, and each of them is responsible for the task until it is completed and pledges to fulfill the state plan in an all-round way. The economic administration departments must also be economically responsible to the state and must assume responsibility for fulfilling state plans.

2. Enterprises should have a certain decisionmaking power. Such power must be given to the enterprise so that it may have initiative in running its administration well and may fully bring this initiative into play. Since 1979, we have expanded decisionmaking power in some pilot project enterprises, enabling them to have power in marketing some products, in utilizing retained profits, in issuing bonuses, in appointing and removing cadres at middle level and so on. This has increased vigor in the enterprises and revived them. In 1981, we implemented the economic responsibility system by setting profit quotas for enterprises and adopting measures of reward linked to profits to the staff members and workers. All localities have adopted various forms of retention of profits and reward in the light of their own conditions. This has further aroused the initiative of the enterprises and workers and improved the administration and management of the enterprises. In the future, following the process of administration system reform, the decisionmaking power of enterprises will be continually practiced and developed. For instance, marketing power to some extent is to be given to the enterprise and a system of good price for good quality will be imposed. This will serve to closely link production and marketing, to improve quality, to expand the market and to raise the social economic returns.

3. Implement the principle of distribution according to work. The egalitarianism existing in distribution has for years seriously affected the initiative of staff members and workers. The implementation of the economic responsibility system and the principle of material interest has partially eliminated the evils of egalitarianism inherent in wages over a long period of time. A bonus principally comprises reward in excess of labor quota. Before the reform of wages is completed in an all-round way, the division of bonuses into categories serves to adhere to the principle of distribution according to labor. Why is the economic system of labor responsibility well received by the people? One of the most important factors is that people urge the implementation of the principle of distribution according to work. If the total amount of bonuses must be put under control and distribution according to labor must be handled well, what is to be done? According to some units' experiences, bonuses should not be leveled out among units and the distribution of bonuses for individuals might have to be increased or decreased.

As regards distribution of profits for enterprises, the relations between the state, the enterprise and the laborer should be handled correctly. In order to guarantee that the state can concentrate financial resources for energy, communications and other construction, the principle of turning over a greater proportion to the state should be implemented in the distribution of profits. In the distribution of the three retained funds in the enterprises, a rational proportion between production funds, welfare funds and staff and workers' bonuses should be stipulated in the light of the enterprises' specific conditions. A considerable amount of production funds should be ensured so that the enterprises can constantly improve their technology and tap their potentials.

4. Conduct enterprises' readjustment in an all-round way and simultaneously carry out necessary reform. The economic responsibility system should be stressed at all levels, from the leading organs to the enterprises. Only by completing enterprise readjustment and all basic tasks will the economic responsibility system be stabilized and gradually perfected. At the same time, the necessary reforms indispensable to completing the economic responsibility system should be vigorously experimented with at selected points or optionally arranged. Reform within an enterprise should be linked with the reform of the entire industrial administration system, and the relations between the part and the whole should be improved. With the constant progress of production technology, they should be constantly improved. A complete and specific system and measures must be found and adopted to suit industrial characteristics, to further arouse the initiative of the enterprises and staff members and workers and to bring about an overall upsurge in the socialist economy.

You Lin [2589 2651]: "Planned Economy Is a Basic Feature of Socialist Economy"

The general program of the party constitution and Comrade Hu Yaobang's report have reaffirmed that the socialist economy can and must develop in a planned and proportionate way. They pointed out that it is absolutely necessary for us to have a planned economy based on public ownership.

What is referred to as the planned economy is coordinated development of social economy based on unified planning. Production is socialized under the capitalist system. However, the means of production are still owned by the capitalists individually. Therefore, an extremely acute contradiction has occurred. Planned division of labor is practiced in the capitalist enterprises, which is characterized by being well organized. However, the production of the whole society, being dominated by the spontaneous division of labor, is in a state of anarchy. Thus, the market has become the only form of mutual contacts and the only regulator of production and circulation. The spontaneous market regulation maintains the proportional relationship needed for the development of capitalist economy, but this is achieved through the frequent disruption of proportion and serious economic upheavals and crises. The establishment of socialist public ownership has made planned economy an objective requirement and opened the possibility for its realization. The planned development of social economy shows that social relations of production no longer rule people as an alien force. They have become jointly owned and brought under the control of the people working together. People's economic activities are no longer prompted by an unknown force but are conducted according to schedule. This constitutes a great leap in the history of mankind. Planned economy comes into being on the basis of public ownership. It also shows, from an important aspect, the nature of socialist production relations. Therefore, it is entirely correct to regard the planned economy as a basic feature of socialist economy.

Some comrades have summarized the basic feature of socialist economy as the commodity economy. This is open to doubt. Everybody knows that commodity production and exchange have been in existence for thousands of years. They are a common phenomenon of the widely different modes of social production. Viewed from the general character of commodity production, they only reflect a mutual relationship between commodity owners. They do not contain more complicated relationships. The essence of capitalism cannot be summarized as a commodity relationship. When criticizing the attempt of philistine bourgeois economists to sum up the relationship between the interested capitalist parties as a simple relationship brought about by the circulation of commodities, Marx pointed out: "If we only know the abstract categories of commodity circulation shared by these modes of production, we are still unable to understand the different features of these modes of production, nor are we able to make a judgment on these modes of production." ("Complete Works of Marx and Engels," Vol 23, p 133) This is because, in the capitalist economy, the law of commodity ownership has been transformed into one of capitalist ownership. It is all the more impossible to summarize the essence of socialist economy as a commodity relationship. In China, it is necessary to vigorously develop commodity production and exchange. However, if we summarize our economy as a commodity economy, it is necessary to regard all state enterprises as independent economic entities possessing all the functions and competence of commodity producers and owners; to regard, under socialist conditions, the most fundamental relationship among people as one of exchange of commodity equivalents and not one of joint ownership and labor; and to regard the factor controlling our economic activities as being primarily the law of exchange at equal value (which, in fact, is an exchange of equal labor) and not the basic socialist economic law and the law of planned development. This will obscure the distinction between the socialist and capitalist economy.

Will it hamper the development of commodity production and exchange if we do not summarize the socialist economy as a commodity economy? No, On the contrary, it will help commodity production develop along the socialist path. In "Questions of Soviet Socialist Economy," Stalin pointed out that we should never regard commodity production as something which independently exists without relying on the surrounding economic conditions and that commodity production exists in several different societies and serves different social systems. In China, commodity production depends on the economy of socialist public ownership, which develops in a planned way and in which the state economy holds a dominant position. It serves the socialist system. Only by clarifying this point is it possible for the developing commodity production to become socialist commodity production beneficial to socialism.

Sun Shangqing [1327 1424 3237]: "Step Up the Study of Economic Structure for the Realization of Strategic Objectives"

The report to the 12th party congress pointed out that, in the period of the Sixth Five-Year Plan, an important job to which we must devote our main efforts is to continuously readjust the economic structure and, in the period of the Seventh Five-Year Plan, to continuously complete the rationalization of the economic structure in various fields. Here, the gradual rationalization of the economic structure has been put forward as a very important task for laying a solid foundation and accumulating strength in the first decade and for creating the necessary conditions for a new period of vigorous development in the second. A rational economic structure is an important condition for achieving better economic results and faster speed of development. What is referred to as a rational economic structure should be one which not only promotes current economic development, but one which is also beneficial to future economic development. It includes structures of both the productive forces and the production relations. In order to ensure the realization of our strategic objective, it is necessary to study well all these structures and raise scientific proposals for these structures.

Rationalization of industrial structure is a basic condition for the proportionate and coordinated development of the national economy. The report to the 12th party congress has stipulated the strategic priorities of economic growth such as agriculture, energy and transport and education and science. It has not only set definite demands on the current readjustment of economic structure, but has also shown clearly the orientation for the rationalization of industrial structure in the next two decades. Our task is, on the basis of major achievements scored in the readjustment of industrial structure over the past few years, to study the trend of future changes in China's industrial structure and raise proposals for the industrial structure in different stages of development so that the structures of various departments, such as agriculture, light industry, heavy industry, communications and transport, building industry, commerce and the service trades, become the best structures for the realization of strategic objectives. It is also necessary to penetratingly study product structure. Quadrupling the gross annual value of industrial and agricultural production is not tantamount to quadrupling the output of all products. It is impossible to quadruple some products, such as energy and certain raw materials. However, it is possible to increase the output of some other products, such as machinery and electronics and petrochemical products, by several, a dozen or even several dozen fold. Within a trade or profession, the growth of various products will also differ in thousands of ways. This makes it necessary to study proposals concerning product structure in order to make sure that the development between the various departments or within the department itself helps to improve the economic results of society.

The realization of strategic objectives should primarily depend on technological progress. It is necessary to study, in light of China's conditions characterized by a huge labor force and a relatively low technological level in production, proposals for China's technological structure so that there is a rational ratio between automatic, semiautomatic, mechanized, semimechanized and manual operations. It is also necessary to study changes in the respective stages of development and to formulate scientific proposals in coping with the situation in order to continuously raise, while expanding employment, labor productivity and the technological level.

When expounding the necessity of upholding the leading position of the state economy and developing different economic forms, the report to the 12th party congress has also scientifically defined the various basic principles for China's ownership structure. It has also called for the rational distribution and development of different economic forms in order to invigorate the urban and rural economy and to make life more convenient for the people. This makes it necessary to set up a rational ownership structure. Therefore, it is necessary to study proposals for the ownership structure which conforms to the productive forces in different stages of development in order to correctly bring into play its positive role in promoting the development of production forces. Undoubtedly, this is also an important subject facing economics.

The research task of economics is diversified. It is also extremely strenuous. So long as we penetratingly study and correctly understand the guidelines of the documents of the 12th party congress and implement them in various research tasks, we will certainly be able to create a new situation in all fields of socialist modernization and make our contributions.

Liu Guoguang [0491 0948 0342]: "The Economic Program of the 12th Party Congress Reflects the Requirement of the Objective Economic Law"

Now I would like to discuss with you, from the requirement of economic law, my initial understanding of the guidelines of the economic program expounded in the 12th party congress.

1. Let us look at this problem from the requirement of basic socialist economic law. Since the 3d Plenary Session of the 11th CPC Central Committee, our party, when formulating new economic principles and policies, has placed the aim of socialist production in a very important position. It was pointed out in the report to the 12th party congress that, on the basis of quadrupling the gross annual output of industrial and agricultural production, efforts should be made to increase the income of the urban and rural population several times over so that the Chinese people will be comparatively well-off both materially and culturally. The report explicitly pointed out that the means to this end can only be the vigorous development of production. The report also made important stipulations in various fields, such as increasing production and practicing economy, the accumulation and distribution of funds, key construction projects and technological transformation. All these will help to meet the requirement of basic socialist economic law in a relatively satisfactory manner.

2. Let us look at this problem from the requirement of the law of developing the economy in a planned and proportionate way. Lenin pointed out: What is referred to as planning is a balance constantly and conscientiously maintained. The report to the 12th party congress pointed out: "China has a planned economy based on public ownership." That is to say, it is necessary for China's economy to constantly and conscientiously maintain its proportionate development. The economic program of the 12th party congress has made important stipulations in two areas--the readjustment of ratio and structure and the reform of planning. With respect to the readjustment of

ratio and structure, the report pointed out that it is necessary to regard agriculture, energy and transport and education and science as the strategic priorities in China's economic growth in the next two decades and, centering around the national economy, carry out readjustment and rationalization of the various economic structures. With respect to planning reforms, the report pointed out that it is necessary to determine, according to different circumstances, the limits and scope of the three different forms of planning, namely, mandatory planning, guidance planning and regulation by market mechanism, and, on the basis of strengthening state unified planning and overall balance, continuously bring into play the supplementary role of regulation by market mechanism. So long as we succeed in establishing a scientific planning system which conforms to China's conditions, we will be able to realize in a better way the requirement of the law of developing the economy in a planned and proportionate way.

3. Let us look at this problem from the requirement of the law that the relations of production must conform to the nature of productive forces. Since the 3d Plenary Session of the 11th CPC Central Committee, our party has, on the basis of upholding the leading position of the state economy, encouraged and supported the urban and rural collective economy and the individual economy within a certain limit and has allowed the coexistence and development of different economic forms, thus promoting the prosperity of urban and rural economy. The economic program of the 12th party congress has affirmed this orientation, explicitly pointing out the necessity for China to maintain different economic forms for a long time to come. It has also more conscientiously applied the law of production relations conforming to the nature of productive forces to the rational distribution and development of different economic forms, with the state economy as the main body. In addition to the different economic forms, the report to the 12th party congress has also dealt with different forms of management and has set forth the task of continuously achieving rationalization of organizational structure of enterprises. These policies and measures will certainly further improve China's socialist relations of production and thus promote further development of the productive forces.

4. Let us look at this problem from the requirement of the law of value. The report to the 12th party congress has further expounded the scope and ways of functioning of the law of value. 1) The scope of the spontaneous regulatory role of the law of value is limited to the production and circulation of some products not listed in the plan. A complement to planned production and circulation, it plays a subordinate and secondary role but is also essential and beneficial. 2) State planning consciously utilizes the scope of functioning of the law of value, including the production and circulation of products listed in the plan. But whether in mandatory planning or in guidance planning, we should constantly study changes in market supply and demand, and constantly make use of such economic levels as pricing, taxation and credits to guide the enterprises in fulfilling state plans. This part of the planned production and circulation is the main body of China's national economy. All these are of great importance to the implementation of the principle of ensuring the leading role of planned economy, which is supplemented by regulation by

market mechanism, and to the vigorous development of socialist commodity production and exchange, thus bringing about an all-round upsurge of the socialist economy.

Li Zhengzhong [2621 7201 0022]: "Uphold the Principle of Relying Mainly on the Planned Economy and Supplementing It With Regulation by Market Mechanism"

The principle of "relying mainly on the planned economy and supplementing it with regulation by market mechanism" expounded in the report to the 12th party congress is a scientific summing-up of the experience gained in China's socialist construction in the past three decades and more. This principle, which has satisfactorily integrated a strong sense of principle with a high degree of flexibility in socialist economic management, should be made an orientation for reforming China's economic management system.

A socialist society should practice the planned economy; it cannot do otherwise. This is because the planned economy is the objective requirement of mass production and the inevitable consequence of the supersession of capitalist private ownership by socialist public ownership. Just as Lenin said: "Socialism is inconceivable without planned state organization, which keeps tens of millions of people to the strictest observance of a unified standard in production and distribution." ("Selected Works of Lenin," Vol 3, p 545) It was explicitly pointed out in the report to the 12th party congress that the planned and proportionate development of the national economy is an important feature of socialism. This shows that in upholding socialism, it is necessary to uphold the planned economy. We should not confuse with the planned economy some imperfections or even some shortcomings and mistakes in planning, still less should we negate the planned economy because of this. Naturally, in order to uphold the planned economy in a more satisfactory manner, it is necessary to strengthen and improve management, raise the standard of planning and improve the system and methods of management. Only in this way is it possible to bring into full play the superiority of the planned economy.

The report to the 12th party congress listed three forms of planning: mandatory planning, guidance planning and regulation by market mechanism (that is, the enterprises flexibly arrange their production according to changes in market supply and demand). These three forms are in fact the crystallization of the principle of relying mainly on the planned economy and supplementing it with regulation by market mechanism. The adoption of the three planning forms conforms to China's reality and the distinguishing features of socialist planned economy. In the present state of our country, there are still two forms of public ownership, the state economy, which occupies the leading position in the entire national economy, and the collective economy of the working people. At the same time, there is also the individual economy of urban and rural working people. Socialist commodity production and exchange still extensively exist. Mass production is still uneven in different departments and localities. Under these circumstances, we cannot adopt a single planning form but should adopt the forms of mandatory planning, guidance planning and regulation by market mechanism according to different circumstances.

The three forms are integrally related with one another and none of them can be dispensed with. They have different status in the planning system. Mandatory planning occupies a leading position. Only with the coordination of mandatory planning can guidance planning and regulation by market mechanism play their proper roles. However, the realization of mandatory planning is inseparable from the coordination and supplementation of guidance planning and regulation by market mechanism, particularly guidance planning. This is because guidance planning has a fairly extensive scope and also plays an important role in promoting the proportionate development of the national economy.

The CPC Central Committee has stressed the implementation of mandatory planning in a certain scope. This is not an expedient measure. I agree with the view that mandatory planning is an important feature of the planned economy. This view conforms with the Marxist principle of planned economy. The planned economy calls for readjustment in the proportion of social reproduction through the economic plans. It goes without saying that these plans should be implemented by the leading economic bodies at various levels and all the economic organizations. The national economic plan is not a general appeal but a program of action for mobilizing a mighty force to realize the strategic tasks of the party and state for economic development. If we do not have mandatory planning as well as its binding force, we do not have a planned economy. Naturally, we do not mean that the greater the scope of mandatory planning the better. The scope of mandatory planning should be determined according to actual circumstances. At the same time, in mandatory planning, we must also "strive to make it conform to the objective reality, constantly study changes in market supply and demand, consciously make use of the law of value and such economic levers as pricing, taxation and credits to guide the enterprises in fulfilling state plans, and give them varying degrees of powers to make decisions as they see fit."

He Jianzhang [0149 1696 4545]: "Build a Socialist Economic System With Chinese Characteristics"

In his opening speech to the 12th party congress, Comrade Deng Xiaoping said: "To integrate the universal truth of Marxism with the concrete realities of China, blaze a path of our own and build socialism with Chinese characteristics--this is the basic conclusion we have reached in summing up long, historical experience." What characteristics does socialism with a Chinese style have? In his report to the 12th party congress, Comrade Hu Yaobang gave a general description of these characteristics. My impression is that, viewed from the economic system, socialism with a Chinese style should comprise the following two aspects:

1. With respect to the structure of ownership, we should implement the principle of maintaining, on the basis of the absolute predominance of socialist public ownership, different economic forms for a long time to come. Comrade Hu Yaobang said: "As the level of development of the productive forces in our country is on the whole still fairly low and uneven, it is necessary to maintain different economic forms for a long time to come."

Our lesson in the past was that we blindly sought "continued revolution" in the relations of production, departing from the specific conditions in the development of China's productive forces. After the socialist transformation of the private ownership of the means of production was basically completed, we were again busy undertaking a "poor transition" without so much as summing up the experience, consolidating the gains in victory and correcting the shortcomings in our work. By the time the "gang of four" was smashed, in both cities and towns there was almost exclusive economy under ownership by all the people; in the rural areas, there was nothing left except the collective economy of the people's commune, which integrated government administration with economic management. This practice was divorced from China's national conditions and brought about serious consequences. Since its third plenary session, the CPC Central Committee has rectified this "leftist" guiding ideology, reaffirming that ownership by the whole people and by the collective are two basic forms of socialist public ownership. The socialist state sector occupies the leading position in the entire national economy. It is necessary to vigorously develop the collective economy, including the cooperatives financed and run by young people and other residents. We must encourage the appropriate development of the individual economy of urban and rural working people within limits prescribed by the state and under supervision by industrial and commercial administration. In agriculture and industrial and commercial enterprises, it is necessary to set up and popularize various forms of the responsibility system, including the system of responsibility for profit and/or loss in some of the state enterprises. It is precisely due to the implementation of a series of correct policies which conform to the development of China's productive forces that the economy has been initially invigorated. This has played a useful role in promoting urban and rural economy and in making life more convenient for the people. At present, it is necessary to consolidate and improve the agricultural production responsibility system and explore diverse and better forms of cooperative economy. It is necessary to explore and formulate a set of specific systems and methods which conform to the characteristics of industry and commerce and which not only ensure the unified leadership by the state but also bring into play the initiative of enterprises and their staff and workers. With respect to some problems that crop up in the course of developing the cooperative economy financed and run collectively and the individual economy, we should also make efforts to solve them and strengthen management over them.

2. With respect to the planning system, it is necessary to implement the principle of "relying mainly on the planned economy and supplementing it with regulation by market mechanism" and practice the method of integrating mandatory planning with guidance planning and flexible arrangement of production. Mandatory planning is aimed at enabling the state to directly control and allocate the necessary material and financial resources for the planned and proportionate development of the national economy and the stability of the people's livelihood. However, it is neither possible nor necessary for the state (including the various departments and localities) to assign mandatory targets to various economic forms and several hundred thousand enterprises for a great variety of products. At present, there are only 140-odd kinds of industrial products administered by the State

Planning Commission which, if we add the industrial products administered by the various departments, come to about 500. There are more than 250 kinds of goods and materials for unified distribution by the State Planning Commission and State Administration of Supplies and there are only about 580 kinds of goods and materials administered by the various departments. Therefore, in addition to mandatory targets, it is entirely necessary to have guidance targets and to allow enterprises to arrange their production flexibly in accordance with market conditions. What merits further study at present is the respective scope and limits of mandatory plans, guidance plans and regulation by market mechanism. It is particularly necessary to explore ways to implement them for various products and enterprises in various departments and localities. It is necessary to draw up a system of targets which is provided with a scientific basis and a list of products for management at different levels. This is a very complicated and meticulous job. Furthermore, the questions of how to effectively apply the economic levers to realize the guidance plans and how to correctly effect regulation by market mechanism are important subjects facing us.

APPROPRIATELY POOL FUNDS TO STRENGTHEN CONSTRUCTION OF MAJOR PROJECTS

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 29-33

[Article by Gui Shiyong [2710 0013 6978]]

[Text] In his report to the 12th party congress, Comrade Hu Yaobang put forward the magnificent goal of quadrupling the gross annual output value in industry and agriculture by the end of this century. For the sake of gradually realizing this goal, an important problem we must solve at present is to concentrate the necessary funds on the construction of major projects. This is an important measure for getting rid of the weak links in the national economy and for ensuring the continued growth of socialist production at the rate we have anticipated.

I

Appropriately concentrate funds to strengthen the construction of major projects is the urgent demand of further strengthening economic readjustment as well as the objective need of long-term economic development.

In recent years, we have carried out a series of major readjustments to the national economy and the serious imbalance in the past in the proportion between consumption and accumulation as well as between agriculture, light industry and heavy industry have become more or less basically coordinated. However, the task of economic readjustment is by no means over, and there are still many problems in the national economy which require solutions. One outstanding problem is that such basic facilities as energy and communications are not in keeping with economic development. In recent years, because of the restriction of all sorts of conditions, the development of energy production has slowed down. However, the phenomenon of serious energy waste has not changed much. In the preceding 2 years, because some heavy industrial enterprises did not have enough production tasks, a portion of their energy was transferred to support the development of light industry. Thus under the condition of no increase or even a slight decrease in the total amount of energy supply, the whole economy still achieved a certain rate of growth. This year, along with the quicker pick-up of heavy industry, the energy shortage has worsened. At the same time, communications and transportation capacities are very much out of line with the increase in freight volume, a great deal of coal has piled up in the mining areas and cannot be shipped out, and the phenomenon of ships and cargoes laid up in ports is rather serious. These conditions show that when there has been a greater improvement in the proportion between consumption and accumulation and between agriculture, light industry and heavy industry, the focus of economic readjustment work should be shifted toward further solving the problem of the internal structure of agriculture and industry and toward coordinating the relations between energy and communications as well as other departments and progressively alleviating the tense situation in energy as well as communications and transportation. This requires us, while at the same time progressively strengthening energy and communications construction and actively increasing the production and supply of energy, to realistically and effectively develop and save energy.

Concentrating the necessary funds to carry forward the construction of major projects is not only the demand of further carrying out economic readjustment, but more importantly, it is the need of ensuring long-term economic development. Proceeding from the historical experience of our economic construction as well as actual social economic conditions, our economic development henceforth should mainly rely on carrying forward technical transformation, improving management and administration and giving full play to the role of existing enterprises. We definitely cannot, as in the past, rely mainly on putting in huge investments to build large numbers of new enterprises. We must not have the slightest doubt or vacillation on this point. However, this definitely does not mean that we can neglect the building of new enterprises or that we can underestimate the important significance of the construction of new projects which are carrying forward socialist modernization. Our rich natural resources are at present poorly utilized, and there are still many resources requiring exploration and development. Our agriculture field's ability to combat natural calamities is still very weak, and many basic production conditions must be progressively improved. Our industrial technology is still rather backward, and such basic facilities as energy and communications must be strengthened. Many developing industrial departments also require faster development. Our economic distribution is still not very rational, and we must continue to improve it in a planned manner. The solution of all the tasks mentioned above requires us to energetically carry forward the technical transformation of existing enterprises. At the same time, we must construct the necessary new enterprises in a planned manner and reconstruct and expand many of the existing enterprises. Otherwise the expanded reproduction of society cannot smoothly develop.

Take the solving of the energy problem for example. We must give priority to the saving of energy, and at the same time, tap as fully as possible the potentials of existing coal mines and oil fields, and strive to increase the production of energy. We should see that our country's energy shortage is to a very large extent caused by the serious waste of energy. Therefore, we must hold fast to saving energy as a long-term strategic policy. However, this does not mean that the additional energy required for future economic development can be wholly solved by practicing frugality. This is not the case. Large-scale saving of energy involves carrying out the reorganization as well as the technical transformation of the whole industry and also requires a procedure. In this procedure, economic growth as well as the increase of energy consumption by the people must certainly be guaranteed by a definite amount of additional energy sources. This requires us, based on needs and possibility, to strengthen energy construction as well as relevant communications construction. In the next decade if we cannot prepare the necessary energy sources, communications and other essential material conditions for vitalizing the economy in the 1990's, then we will encounter great difficulty in achieving the strategic dispositions for the whole economic development. The construction of energy sources and communications will require a great deal of money and take a long time. We must make appropriate arrangements well in advance. On this question we would rather make the estimates more difficult and the preparations more adequate than are actually required, for this will be more to our advantage.

Strengthening the construction of major projects requires a considerable amount of money. Where does this money come from? As China is a socialist country, construction funds must rely mainly on internal accumulation. The basic path of accumulating funds is by developing production, raising economic benefit and opening up sources of revenue. In other words, we must first have ways of making money. Only with the development of production, the raising of economic benefit and the increase of public wealth can we keep on improving the livelihood of the people, and at the same time, accumulate more and more construction funds. If we deviate from developing the economy to raise funds, we will be attending to trifles to the neglect of essentials and will be unable to properly solve the question of funds. At present, regardless of whether in the field of production, communications or circulation, the waste of manpower, material resources and financial resources is very serious. Many technical and economic indices are very much lower than those of the economically developed countries, and even not as high as the better level we have reached in the past. There is extremely great potential for increasing production and practicing economy in various fields. If policies are on the right track and work is effectively carried out, it is entirely possible to create more material wealth by making use of the existing financial and material resources and thereby provide an enormous source for the accumulation of funds. The emphasis on ways to make money definitely does not mean we must not pay attention to ways of accumulating funds. It is just the opposite. After wealth has been created, the rational distribution carried out regarding its various uses is of great important significance to whether or not the necessary funds can be accumulated and whether or not the coordinated and sustained development of the national economy can be promoted. In particular, in such a populous and backward country as ours where the average per capita national income is still very low, China is still faced with the strenuous task of improving the livelihood of the people and pushing forward the modernization. Under these conditions, the making of overall planning and arrangement and the correct handling of various proportions in the distribution of national income are of prime importance. An important manifestation of the superiority of the socialist economy over the capitalist economy is that it can concentrate necessary financial and material resources for solving those urgent and immediate problems and thereby promote faster development of the economy. Based on the per-capita economic index, China is still a poor country and not very well-off in many respects. However, if the funds scattered throughout the country can be rationally centralized, it will become a very impressive force and many important things can be done. This is precisely the strong point of a large country such as ours. If we take advantage of and give play to this strong point, it will play a very important role in pushing forward our socialist modernization. The task we are faced with at present is to appropriately readjust the relations of distribution so as to concentrate necessary funds to strengthen the construction of major projects on the basis of energetically developing the economy and striving by every means to increase national income.

II

For the sake of accumulating necessary funds to guarantee the construction of major projects, we must first continue to handle properly the relations between consumption and accumulation and make unified arrangement for the livelihood of the people as well as production and construction in accordance with the principle "first, feed the people and second, build the country."

In recent years, for the sake of correcting the previous mistake of placing one-sided emphasis on production and construction to the neglect of the people's livelihood, we have adopted a series of measures such as greatly raising the purchasing prices for agriculture products, expanding labor employment in cities and towns, readjusting the wages of workers and staff members and implementing the bonus system to more quickly raise the standard of living of urban and rural people. According to statistics, compared with 1978, the 66-percent increase in the net income of individual peasants and the 44-percent increase in the total wages of workers and staff members in 1981 have both greatly surpassed the 22-percent increase in the gross output value of agriculture and industry and also the 35-percent increase in the total output value of agriculture and light industry for the same period. In these 3 years, the 26-percent increase in the average wage of workers and staff members has surpassed the 7-percent increase in the labor productivity of all personnel of enterprises for the same period. Almost all the new increases in national income during these 3 years have been used for increasing consumption and there has been no increase in accumulated funds. For the sake of evidently improving the longstanding rather low livelihood of the people and thereby arousing the enthusiasm of the masses for production, this practice has been necessary. However, this practice can only be carried out within a specific and relatively short period, and should not and cannot continue forever. If we keep on improving the livelihood of the people to an extent in excess of that of the production growth and labor productivity and use all of the increase in national income on consumption, the accumulation of funds is bound to be affected and production and construction will be impaired. In this way, production will not be able to increase more quickly and the livelihood of the people will not continually improve. We should see that a very great change has already taken place in the condition of the economy as a result of the readjustment in recent years. On the one hand, the income of the overwhelming majority of urban and rural people has evidently increased and varying degrees of improvement have appeared in their material and cultural life. On the other hand, capital construction investment by the state has already been cut to a minimum. For the sake of ensuring the continued development of the economy, we must make appropriate increases in the future. The price subsidy shouldered by state finance has already taken up more than 30 percent of financial income, and this cannot be increased further in the future. The increase of purchasing power in society for several years has surpassed the increase in commodity supply volume, and the daily increase in surplus purchasing power is affecting the stability of market prices. These conditions explain the inadvisability of continuing the method of freezing accumulated funds to greatly increase consumption funds practiced in recent years, and the proportion between consumption and accumulation should be basically stabilized. Along with the development of production, the consumption level of the people will continue to increase in the future. However, the margin of increase should no longer surpass but should be lower than the margin of production increase. It should be suited to the increase in the production and supply of consumer goods. The accumulation rate may also be appropriately lowered a bit further, but this must be on the premise of increasing the indispensable absolute amount of accumulation. Only in this way can we continue to improve the livelihood of the people, and at the same time guarantee the essential expansion of production and construction and thus enable the livelihood of the people as well as production and construction to be closely linked together, promote each other and push forward the coordinated development of the national economy.

Proceeding from this kind of new condition and demand, for a number of years to come, the increase in the income of the peasants should rely mainly on developing agricultural production and lowering production costs, and should no longer rely mainly on raising the purchasing prices for agricultural products, lowering the base figure of requisition by purchase of assignment and expanding the range of negotiated prices. At present, the productivity and economic benefit of our industry are still rather low, our ability to accumulate funds is not very high, and a process is needed to change this condition. Therefore, the accumulation of a considerable part of the funds needed for giving impetus to modernization must still rely on agriculture. This is not only the bounden responsibility of the broad masses of peasants but also tallies with their fundamental interests. If we do not take into consideration the capacity of the national economy but continue to raise the purchasing prices of agricultural products, this will certainly raise the costs of industrial production, increase the subsidy of prices and reduce the accumulation of funds. This is detrimental to overall economic development. Moreover, by constantly raising the purchasing prices for agricultural products under the condition that industrial efficiency cannot be correspondingly increased, it will also be difficult to have enough industrial goods to exchange with the peasants. In this way, either the peasants with money will not be able to buy the industrial goods they need for the prices of industrial goods will also be readjusted upward. Such conditions are detrimental to economic stability and development, and in the final analysis, also detrimental to the development of agriculture and the continued improvement of the peasants' livelihood. For the sake of enabling the increase in production to be suited to the development of production, the extent of increase in the wages and bonuses of the workers and staff members should be lower than that of the production increase and labor productivity. If we want to increase income, we should concentrate efforts on raising labor productivity and lowering costs. We definitely cannot indiscriminately issue bonuses and subsidies without taking into consideration the actual increase in production and profit. Only in this way can we improve the livelihood of the workers and staff members and at the same time accumulate necessary funds, and can we balance market supply and demand, stabilize prices, guarantee the continued development of the national economy and create a more solid material basis for unremittingly improving the people's welfare.

When we say that we must appropriately control the increase in consumption based on the new situation, this definitely does not mean that we need not pay attention to the necessity and possibility of improving the people's livelihood. Ours is a socialist country, and our basic goal in carrying out production and construction is, in the final analysis, to satisfy the daily increasing material and cultural needs of the people. This is a basic principle we must always uphold. In recent years, although there has been a great improvement in the people's livelihood, many problems still exist. In the countryside, there has been not much of an increase in the income of the commune members of some poor and low-yield production teams, and the livelihood of the peasants in some areas affected by serious natural calamities is still very difficult. In cities and towns, the burden of some workers and staff members with low wages, less bonuses and many mouths to feed is still very heavy. For many families, housing is still in very short supply. Especially, the material treatment and working conditions for middle-aged intellectuals and workers playing a key role on various fronts are rather poor. We must attach great importance to these problems and adopt measures to solve them step by step. The standard of living of people throughout the country is also still rather low at present, and it must be progressively improved along with the development of production. The reason we emphasize accumulating necessary funds for carrying out construction is precisely for the sake of guaranteeing the continued improvement of the people's livelihood. We must appropriately link together the immediate and long-term interests of the people. In our country, we not only must not force down the normal consumption of the people to expand production and construction, but we also must not squeeze out or take over essential construction funds to improve the people's livelihood. We not only must not wait until we have made a success of construction before turning back to improve the people's livelihood, but we also must not wait until we have become better off before carrying out construction. The only correct policy is to take into consideration both construction and the people's livelihood so that they will develop in harmony.

III

For the sake of concentrating necessary funds to carry out the construction of major projects, we must also correctly handle the relations of funds allocation between the central departments, localities and enterprises. We not only must guarantee essential extra financial resources, but we must also enable the state to be in control of comparatively more funds.

For a long time, our defect in this respect was that because of overconcentration at the central departments, localities and enterprises lacked the necessary extra financial resources. This has on the one hand fettered the initiative of the localities and enterprises, and on the other hand, encouraged blind command in economic management and resulted in many negative consequences in economic development. In the past, the proportion occupied by local income in state financial income was rather low. This has now been increased. In the past, very little of the net income was retained by state-run industrial enterprises. Now this has been increased to about 12 percent. These changes, in addition to other reform measures, have played a very useful role in giving play to the initiative of the localities and enterprises and livening up the economy. The present problem is that some of the reform measures cannot be linked up. Many units do not strictly observe the financial discipline of the state. They arbitrarily increase the proportion of the profits retained by the enterprises and even cut off the income which should be handed over to the state, causing the allocation and use of funds to be unduly scattered. In 1981, the funds controlled by localities and enterprises outside the budget roughly equalled half the state financial income, and only about half of the total investment in capital construction of units owned by the whole people in the country was directly controlled by the state. On the one hand, state finance was in straitened circumstances and did not have enough funds for the construction of major projects. On the other hand, many units did not utilize the funds in accordance with the plans and policy demands of the state and blindly went in for projects aimed at purely expanding processing capacity. Such weak links as energy sources and communications in the national economy could not be properly strengthened, technical transformation focusing on energy conservation could not be quickly developed, and high energy consumption trades which should have been put under control continued to develop. Obviously, unless this state of affairs changed, the planned and proportionate development of the national economy would be adversely affected.

China has a vast territory and numerous enterprises. The conditions of various localities are vastly different, and moreover, changes are always taking place. For the sake of guaranteeing that localities and enterprises will be able to organize production activities in line with local conditions, we must give them the proper power including the necessary financial power. Especially as the economic development in the future will mainly be turned to intension, the emphasis will be placed on replacing the equipment of existing enterprises and technical transformation. This means that it is even more necessary to give essential power to the enterprises and localities so that they can improve their management and administration and raise their production technique in a manner suited to their own specific conditions. At the same time, we must also see that the power of socialist enterprises and localities is under the planned guidance of the state. The power for working out a nationwide comprehensive balance, its amount as well as its application, must contribute to and definitely not hinder the coordinated development of the whole economy. At present, such basic facilities as energy sources and communications are backward. However the transformation and construction of most of these basic facilities cannot be shouldered by the localities and enterprises and they must be planned, prepared and conducted in a unified manner by the state. At the same time, the present price system is not very rational. To a very great extent, it restricts our utilization of the economic lever to guide the enterprises and localities in making rational use of funds. The organizational structure of our enterprises is also not very rational, and the setup of many enterprises is very unrealistic. Such enterprises should be closed, their operations suspended, be merged into other enterprises or shifted to other types of production, and we must carry out reorganization and integration in accordance with the principle of specialized cooperation. All this explains the inadvisability of handing too much financial power to the enterprises and localities under the present condition. Otherwise, it will be difficult to use the limited funds where they are needed most and the development of projects highly beneficial to the national economy will be affected. Judging from the general situation at present, localities and enterprises already have too much financial power. We must make appropriate readjustments so as to guarantee that the state will still be able to concentrate necessary funds for the construction of major projects.

We must combine economic readjustment with strict financial and economic discipline, and wage a struggle against such offenses against law and discipline as random spreading of costs, cutting off income, evading taxes and wantonly increasing profits retained by enterprises. All practices running counter to the existing policies, systems and regulations of the state should be conscientiously corrected, all forms of tax evasion must be plugged up and all income which should be handed over to the state must be collected. At the same time, while continuing to implement the existing financial system and guarantee the proper decisionmaking power of the enterprises, we must also appropriately readjust the proportion of the allocation of central and local financial income as well as the proportion of profits retained by the enterprises in accordance with the actual conditions of different areas and trades. In the use of funds controlled by the state, we must also make appropriate concentration. We must emphasize using funds for the construction of such basic facilities as energy sources and communications and appropriately increase investment in the field of intellectual development. Construction in other fields should mainly be arranged by the localities, departments and enterprises based on their own funds and possible bank credit. In doing so, we are definitely not trying to slip back to the old rut of over-rigid control. In the process of concentrating funds, we should take into account the rational needs of enterprises and localities so that they will have the extra financial resources to do some of the things, which are not advisable to be carried out by the central departments, in a manner suited to local conditions, and thereby bring their initiative into full play. Moreover, we also cannot merely rely on this method of financial concentration of funds to guarantee the construction of major projects. We must also properly give play to the role of banks in raising and utilizing funds, and through bank credits, centralize idle funds in society and use them in a planned manner for production and construction. At the same time, the state must also implement administrative and economic methods to guide the orientation of the localities and enterprises in the use of their own funds and encourage them, by means of various forms of economic alliance, to use the funds where they are needed most by the state. In particular, we must use the funds for replacing the existing enterprises, carrying out technical transformation, conserving energy, cutting down the consumption of raw materials, improving product quality, strengthening the comprehensive utilization of resources and controlling pollution, and not simply trying to expand production capacity. In this way, under the condition of strictly controlling the scale of fixed capital investment of the whole society, we will be able to free funds for strengthening the construction of major projects, push forward the technical transformation of key enterprises and properly integrate and combine these two aspects. In the allocation of financial resources, we should take into consideration the needs of these two aspects as much as possible and guard against paying attention to one aspect and losing sight of the other.

On the question of rational allocation and correct use of funds, we must firmly establish the thought of "coordinating all the activities of the nation like pieces in a chess game." At present, many of the localities, departments and enterprises want to keep some funds to do more of the things they would like to do. This demand is understandable. However, if we do not take resolute as well as realistic and practical measures to guarantee the construction of essential major projects, such basic facilities as energy sources and communications will not go forward, excessive energy consumption will not go down and it will be difficult to enliven the overall situation of the national economy. Under this condition, the development of the various parts will certainly be greatly affected. Conversely, only with the appropriate concentration of funds to strengthen the construction of major projects can the proportion between supply and demand in such fields as energy sources and communications be coordinated with each passing day, and can there be favorable external conditions for the development of various localities and enterprises.

THE TWO CIVILIZATIONS MUST BE GRASPED SIMULTANEOUSLY

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 34-37

[Article by Sanming Municipal CPC Committee Secretary Yuan Qitong [5913 0796 1749]]

[Text] In his report to the 12th party congress, Comrade Hu Yaobang pointed out that it is a strategic principle of our socialist construction to build a high material civilization simultaneously with the building of spiritual civilization. He stressed: "Whether we are able to persist in this principle is related to whether socialism will thrive or fail." In recalling practice over the past few years, we have deeply realized that the principle of "grasping the two civilizations simultaneously" put forth by the CPC Central Committee is correct and this principle has pointed out the orientation for realizing the socialist modernization program of our country. The following are some experiences gained in the work carried out by Sanming municipality in implementing the strategic principle of the CPC Central Committee.

Sanming municipality is a newly arising industrial city in Fujian Province. It has made certain achievements since it was constructed in 1958. However, as a result of the influence of "leftist" guiding ideology and sabotage during the 10 years of turbulence, the construction of the city left much to be desired. For example, the housing situation was tight, the number of commercial centers were limited, traffic was congested, public order was chaotic and there were limited cultural and recreational facilities. The masses said the city was characterized by no electrical lighting, uneven roads, ineffective telephone facilities and an unstable social order. Industrial and agricultural production was seriously affected. Following the 3d Plenary Session of the 11th CPC Central Committee, we eradicated "leftist" guiding ideology and stepped up our leadership over work in various aspects. Thanks to this work, the city began to take on a new look.

Since last year, we have studied the directives of the CPC Central Committee on "grasping the two civilizations" and have realized that in order to build the city into an industrial city with "political stability, economic prosperity, advanced culture, a beautiful environment and convenient life," it is necessary to grasp the building of material civilization simultaneously with the building of spiritual civilization. Work in these two aspects must be arranged in a unified manner so that they will also be able to develop simultaneously. The building of the two civilizations covers many aspects such as politics, economy, culture and ideology. In carrying out the building of spiritual civilization, it is necessary to solve urgent problems and carry out work more effectively so as to promote the development of material civilization. We have based ourselves on the spirit of the directives of the CPC Central Committee and the demand of the masses and have spared no efforts in improving environmental hygiene, cleaning the environment, planting trees and beautifying the city. Efforts have also been made to improve social safety in a big way and traffic order, carry out municipal construction, repair roads, construct housing, add commercial centers and build parks and cultural and recreation facilities. At the same time, we have also launched mass campaigns of "learning from Lei Feng and fostering new habits" and "five stresses and four beauties." In March this year, we also launched a large-scale civility and courtesy month drive across the city. Thanks to these efforts carried out over the past 2 years, the city has taken on a new look while the people's living standard has been improved considerably. The newly built housing facilities cover 330,000 square meters, equivalent to the total space of the housing facilities built in the past 2 decades and more. More than 270 new commercial service centers have been added; this figure is more than double the previous number. In downtown areas, 16 streets and lanes have been built or repaired. In addition, we have also constructed waterways totaling 6,000 meters in length and built 21 latrines; we also have built and expanded 8 parks and scenic spots and planted 500,000 trees. Considerable achievements also have been made in improving hygiene and restoring social order. The sanitation situation has been greatly improved. In the first 8 months of this year, cases of epidemic diseases were 40 percent less than the same period last year. Social safety and public order have been greatly improved. In the first 8 months of this year, the number of criminal cases dropped by 41 percent compared with the same period last year. Undesirable work styles in commercial and service trades, characterized by "inaccessibility, reluctant attitudes, offensive remarks and delays in work" have begun to change. More than 25 percent of the total population in urban areas have taken part in the activities of "learning from Lei Feng and fostering new habits" and they have done much work in the interests of the people. A new atmosphere has emerged in party work style and the people's work style throughout the city.

Changes in the outlook of the city, improvement in the people's life, particularly improvement in ideological consciousness, have enabled the broad masses of cadres and people to fully display their socialist initiative and promote production in a big way. Gross industrial output value in 1981 was 9.3 percent higher than 1980, while agricultural output value increased by 18.3 percent. The average per capita collective income of commune members increased by 36 yuan to reach 190 yuan. Financial revenue increased by 7 percent. Gross industrial output value has continued to grow this year. In the first 8 months of this year, it was 18 percent higher than the same period last year, while the figure for March, June and August was the highest monthly output value in the 24 years since the city was built.

The great changes experienced by the city over the past 2 years proves that the two civilizations promote each other and are indispensable. Spiritual civilization must have material civilization as its foundation and the building of the former can in no way depart from material conditions. At the same time, the building of material civilization cannot depart from the building of spiritual civilization; the latter not only has a tremendous motivating role for the former but also guarantees that the former will develop along a correct orientation. With regard to the work of a city, there is no doubt that, first of all, it must do a good job in production and economic work, as these are basic tasks. But to grasp economic work does not automatically mean that a good job is being done in socialist construction. It is only when we are able to grasp socialist material civilization simultaneously with grasping socialist spiritual civilization that we are carrying out socialist construction in an overall way. So spiritual civilization represents an important feature of socialist material civilization and is an important manifestation of the superiority of the socialist system. Without the construction of socialist spiritual civilization, we will not be able to build material civilization well; even if we are able to build spiritual civilization, it will not last long and cannot be consolidated; it may even be eliminated. This situation has been proved through historical experience. Therefore, the thinking and method of putting these two civilizations in contradiction and neglecting the building of spiritual civilization are incorrect; neither is it right to consider grasping spiritual civilization as grasping a minor matter instead of an important matter.

To grasp the building of the two civilizations well, particularly the building of spiritual civilization is in fact a revolution of transforming traditions and habits and transforming society. The aim of this revolution is not only to change social outlook but also to change people's spiritual outlook. Therefore, it involves every family and every member of society. Following the 10 years of turbulence, the problems of "dirt, chaos and backwardness" in the city were very common and serious and social order was seriously damaged. In addition, there were also the influences of various wrong ideologies, old habits and old traditional concepts. Therefore, there were many difficulties confronting us in the building of the two civilizations. We understand from our practice that we can implement the guiding ideology of "grasping the two civilizations simultaneously" well and make new achievements in the building of the two civilizations only when we are able to work with revolutionary zeal.

In order to work with revolutionary zeal, it is imperative to oppose the thinking of attempting and accomplishing nothing and the attitude of fearing to overcome difficulties. It is also imperative to foster the ideology that considers everything from the point of the interest of the people and to carry out work well. Each task must be carried out faster and achievements must be made. We have done our work in this way and consequently many construction items have been speeded up. For example, we built the Qiling Mountain Park on a total space of more than 600 mu at the top of the mountain in only 1 year. The building of street flowerbeds of more than 2,000 square meters on 3 major streets was completed in only 2 weeks.

To work with revolutionary zeal, it is also imperative to oppose irresponsible attitudes and to advocate the attitude of daring to shoulder responsibility and to solve problems. In order to solve the problems of dismantling and removing houses to give way for the extension project of the Hongqi Road North and Dongxin Road II, leading comrades from the municipal party committee, municipal government and municipal construction departments visited Xubi Estate on five occasions in August last year to investigate the situation of the masses and to carry out meticulous ideological work. As a result, the old problems of dismantling and removing more than 40 houses were resolved and the projects of the two streets that had been delayed for 8 years were at last completed. Dismantling work in other sections of the projects have also been resolved one after another following meticulous ideological work.

To work with revolutionary zeal, it is also imperative to oppose the work style in which cadres confine themselves to their offices, from where they give guidance irrespective of reality, and to encourage leading cadres to go deep into reality, carry out work on the spot, set examples through their own deeds and solve difficulties wherever they crop up. Over the past year and more, we have organized leading cadres to carry out work at the grassroots level on more than 10 occasions. On the eve of the last Spring Festival, leading comrades from the municipal party committee and municipal government, with exception of a few comrades who remained on duty, led more than 1,200 cadres above the level of deputy bureau director throughout the city to carry out work on several fronts to grasp the situation of market supply at the grassroots level, grasp the work of cultural and recreational activities of the masses, transform the scenery of the city, improve social safety and public order and arrange industrial and agricultural production during the holidays. As a result, we have been able to promote the work of various departments, improve the people's material and cultural lives and train cadres and promote the relationship between the party and the people. Exemplary deeds of cadres have educated and encouraged the masses of people who have consequently been able to enlighten their spirit and increase their confidence in socialist construction and the party.

Communist ideology is the core of socialist spiritual civilization. The primary task of building socialist spiritual civilization is to educate people with communist ideology and communist morality so that more and more members of society will become workers with ideals, morals and culture and who abide by discipline. Because of the grave consequences of the 10 years of turbulence, this kind of education is particularly pressing at present. We have grasped this work in connection with other work and with emphasis on party ideological building and the ideological and political work of the masses.

The building of party ideology supports the building of social spiritual civilization. The ideological level and work style of the broad masses of party members, particularly party cadres, have a direct effect on the ideology and morality of the whole society. Therefore, improvement in the ideological level of the broad masses of party members and basic improvement in the party's work style play a decisive role in the building of socialist spiritual civilization. Over the past year and more, we began this work among the standing committee members of the municipal party committee while party organizations at various levels began the work of rectifying the party's work style as the key subject in organizational activities. This work includes the following: 1) Party members have been organized to study a series of directives of the CPC Central Committee and carry out education on persisting in the five basic principles so as to solidly foster communist ideals and concepts. 2) Following the principle of rectifying work style and the principle of party constitution and inner-party political activities, education has been strengthened on party character, party discipline and party work style and criticism and self-criticism launched. At the same time, party members have been educated on how to maintain the purity of their ideology; this work has been carried out in connection with measures to hit at criminal activities in the economic sector and to fight against corrosion. 3) The combat capability of party organizations and the ideological level of party members have been tempered and improved through practice in the building of the two civilizations. Work has also been carried out to regularly check, examine and appraise the ideology, work style and practice of all party organizations and members throughout the city. During the launching of civility and courtesy month, the municipal party committee organized more than 800 cadres above the level of party branch members at grassroots level across the city to conscientiously study the directives of the CPC Central Committee. At the same time, all party members were organized to take part in the building of the two civilizations; in this work they have played the roles of both propagators and fighters. Thanks to the vanguard and exemplary roles of all party members, the civility and courtesy month was carried out smoothly.

People are the masters of history as well as the builders of the two civilizations. It is only when people are armed with communist ideology and moral concepts that they can display to the utmost their initiative and creativity and promote the constant development of the building of the two civilizations. Therefore, we have proceeded from reality and used various methods to carry out education on revolutionary ideals, morality, discipline and law and education on social morality, professional morality and marriage and family morality among cadres and masses in various trades, particularly among youths. The masses were organized to work out various rules and regulations on the civilizations as criteria for their deeds. This work is aimed at enabling people, in their common social life, to consciously follow communist spirit, correctly handle the relationships among the state, collective and individuals, correctly handle the relationships among people and foster collective and patriotic ideology and the sense of responsibility as the masters of their own country. We have also taken active measures to lead the masses in launching the campaign of "learning from Lei Feng and fostering new habits" and creating civilized units so as to foster good morality. We have also taken a clear-cut stand in commending and supporting new people and new things that have demonstrated communist spirit and have hit at bad habits and traditions and undesirable persons and things. In order to carry out ideological work well and promote the work of various aspects, we have since May last year transferred more than 6,600 people from government organizations and enterprises and formed them into 10 propaganda teams. These teams are assigned certain work in certain places for maintaining social safety and environmental hygiene, public traffic order and to help in service trades and eliminate spiritual pollution. These teams have carried out ideological and political work at the grassroots level to become a backbone force in the building of the two civilizations. Great changes have taken place in social practice thanks to education. During the civility and courtesy month over 100 advanced units and over 4,000 activists emerged.

Marxism states that the basic purpose of socialist construction is to meet the increasing needs of the people's material and cultural life. In the final analysis, the purpose of doing a good job in the building of the two civilizations is also to realize this goal. Therefore, we carry out our work according to the specific conditions of our city, grasp the work that is urgently needed by the masses and solve problems so as to do more and better work. The present Hongxing shopping center is built on the site of a former rubbish dumping ground that had seriously affected municipal scenery and environmental hygiene over the past many years. Measures were taken to clear the rubbish and build a shopping center with 27 state-owned and collective shops as well as individual shops that sell food and daily necessity goods. In this way, we have not only removed the heaps of rubbish but also improved the scenery of the city, activated the market, brought convenience to the masses, arranged employment and added income for the state. Basing themselves on the desires of the people and their own specific conditions, various trades have taken measures to solve such problems as housing; coal supplies; vegetable supplies; commercial centers; traffic; recreation activities, such as movies, operas and television programs; latrines; and sports activities. As all problems have been gradually solved, a more convenient living environment for the masses consequently has been formed. Through their own experiences, the broad masses of people deeply understand that to "grasp the two civilizations simultaneously" is not only in the long-term interest of the state and the nation but is also in the interest of each member of society and therefore they have become more determined in building the two civilizations.

However, the work we have done over the past 2 years is far from enough. We only have made limited and initial achievements in the building of the two civilizations and these achievements are still far from what is demanded by the party. But we understand that these achievements represent a good beginning. Now, the broad masses of cadres and people are able to measure their work from the point of the two civilizations and relate their various concrete work with the long-term goal. This situation has provided us with a better ideological foundation for building the two civilizations on a larger scale in the future. At present, it is imperative for us to do a good job in studying and disseminating the spirit of the 12th party congress. In particular, we must do a good job in studying and disseminating the importance of building a high socialist spiritual civilization, in carrying out the activities of the "five stresses and four beauties" and in further displaying the initiative of various departments and units so as to further overcome the conditions of "dirt, chaos and backwardness." I am fully confident that with the encouragement of the spirit of the 12th party congress and under the guidance of the correct principles of the CPC Central Committee, we will be able to make new achievements in the building of the two civilizations.

CSO: 4004/6

SERIOUSLY CARRY OUT THE WORKERS' CONGRESS SYSTEM

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 38-41

[Article by Yu Yannan [2456 3601 0589]; passages within slantlines published in boldface]

[Text] China's experiences in socialist construction illustrate that the workers congress system under the control of party committees has raised the working class' sense of mastery and responsibility, as well as activating their enthusiasm to manage affairs and correctly set up the basic organizational style of socialist enterprise. The "Provisional Regulations of the Workers Congress in State-Owned Industrial Enterprises" drawn up by the CPC Central Committee and the State Council (referred to hereafter as "the regulations") clearly outline the powers of the workers' congress based on state governmental policies and laws and planning demands. These powers relate to enterprise production, management and distribution as well as cadre surveillance, election, recall, etc. This is the successful result of the party's guidance of the working class in the development of socialist democracy and carrying out the systematization of the democratic management of enterprise. Furthermore, it is an embodiment of our party's total reliance on and trust in the working class under the historical conditions of modernized construction. After the publication of the regulations, every region and department quickened the pace of introducing the workers' congress system. Up until the end of last year, the number of enterprises and units that had introduced the workers' congress system stood at around 101,000. Most medium and large-scale industrial enterprises in Beijing, Tianjin, Shanghai, Shenyang, Harbin, Guangzhou, Nanjing and Chongqing had all basically completed the popularization of the system.

In the last year, many enterprises have been working very seriously in accordance with the regulations and the workers' congress has played an active role in improving administration and management, correctly solving internal enterprise contradictions, strengthening surveillance of cadres, etc. However, in national terms, the general situation concerning the introduction of the workers' congress system is not well balanced. The proportion of well organized workers' congresses is small and a great many work units have set up workers' congresses which display varying degrees of formalism and perfunctoriness and of which, of course, most workers are very critical. Thus, the pressing task which now faces today's enterprises is to satisfactorily and completely put the workers' congress system into effect and ensure that the working masses are able to enjoy all the democratic powers outlined in this system.

/I. Continue to raise the consciousness of the broad mass of cadres, in particular the enterprise leaders, regarding the importance of implementing the workers' congress./

Some work units which have already set up workers' congresses but without success, find that the main reasons for this lack of success lie with the leading cadres of the units. Many leading cadres are not accustomed to putting workers' congresses into action and fear the power of such congresses as well as the loss of their own power. In some enterprises, party organizations have taken on the work of the workers' congresses themselves and insist that all affairs, whatever the size, must be discussed by the party committee, getting the consent of the workers' congress afterward. Some leading administrative cadres only want to make use of the workers' congress when they are faced with problems that they themselves cannot solve, such as only partially fulfilled production quotas, and thus are not in the least interested in allowing the workers to enjoy their democratic powers, feeling that democratic management with everyone having a say will hinder the realization of the foreman responsibility system. Some people even feel that enterprises should be in complete control of foremen and managers appointed by the state, with workers powerless to participate in management. All this illustrates that some people have a confused understanding of or misconceptions about recognizing workers' positions as masters of the enterprise and the reasons for carrying out democratic management in socialist enterprises as well as the basic relationship between state-employed personnel and the working masses. Such misunderstandings must be quickly clarified.

Democratic management is a necessary part of the socialist system of public ownership of the means of production and is, indeed, a reality of it. Distribution according to work is another reality of such a system. The establishment of the socialist system of public ownership of the means of production means the thorough eradication of the relationship of exploiters and exploited, laying a material foundation for the workers to become masters of enterprise management. For the workers to become masters of the means of production is by no means an empty, abstract concept; there is a very full and concrete content to it. It includes the need for workers to have authority and power when involved in enterprise production, administration and distribution activities as well as the election, surveillance and recalling of the enterprise leadership; in other words, anything related to enterprise management or the workers' personal interests. Thus, the workers should use suitable channels and means to participate in actual and not merely nominal enterprise management. If workers only have labor rights within an enterprise and are deprived of management rights, then their position as masters of the enterprise has not been fulfilled or, if it has, then in name only. Mao Zedong pointed out that we should not come to understand the power of the people to mean only labor powers, education and social security. The workers' power to manage the state, enterprise and cultural education is the most basic of powers. If democratic management is not carried out in our socialist enterprises, then the working masses are not able to involve themselves in important economic activities, are not able to carry out surveillance of enterprise leaders or carry out the democratic election or recalling of enterprise leaders within the specific limits laid down by the laws and regulations. Thus, how does the fact illustrate itself that the workers are masters of the means of production and in charge of enterprise management? Hence, in very basic terms, supporting democratic management means also supporting the workers as masters of the means of production and, also, the socialist system of public ownership of the means of production.

State-run enterprises belong to the whole nation and the workers in such enterprises are part of the nation. Not only do they, along with the rest of the population, possess the means of production of their enterprises, but they also make direct use of the means of production in their enterprises and carry direct responsibility for organizing all affairs in the enterprises. Power and responsibility cannot be separated. Because of the workers' closer relations with the enterprise's means of production, the production process and production results, they have a more direct and greater right to say how these means of production should be organized and used, how production technology should be improved and how economic efficiency should be raised, than other workers in enterprises and than other workers in general. Thus, while the management of state-run enterprises manifests itself through unified state plans, policies and decrees, through instructions from higher authorities and through the direct role played by the directors of the enterprise, democratic management of the enterprise by the workers and staff is also necessary, in accordance with the rules and regulations set by the state and higher authorities and through proper organizational forms. These two are not contradictory but should combine and work together to unite the interests of the state, the collective and the workers, thereby ensuring the quality of state-owned enterprises and helping the workers become masters of their work while fuelling their enthusiasm and creativity.

At present, the workers' congress system is a fundamental system guaranteeing that the working class will act as masters of our society. By making use of the workers' congress system, the workers can make use of democratic powers in their enterprise to become the masters of their situation and this is an important part of the move to strengthen socialist democratic construction. But the leaders in some enterprises have forgotten that the party should direct and support the workers' move toward mastery over their affairs and such people wrongly feel that giving power to the workers' congress and allowing the working masses to exercise power will destroy the leadership of the party committee. This is completely wrong. Ignorance or deprivation of the workers' democratic rights will not be tolerated. Such people are in fact not recognizing the workers' position as masters of their affairs and they have forgotten that they themselves have been appointed by the state and the people to take up their public office of duties and they either consciously or subconsciously place themselves in a position above the people. They do not realize that if the workers in an enterprise do not become the masters of their affairs then their sense of responsibility and their enthusiasm toward politics and production will suffer greatly, indeed may be eliminated completely. Full expression of the workers' production enthusiasm is one of the fundamental advantages of the socialist system. We should do a lot of serious thinking about the extent to which the advantages of the socialist system give expression to such things, as well as the basic position of cadres within a socialist state. Misconceptions and mishandling of such things should also be thoroughly corrected.

Investigative materials illustrate that, at present, relations between cadres and the masses in some enterprises are very uneasy. The workers lack the democratic powers that are their right and this has already influenced their political and production enthusiasm. In China's enterprises the problem of cadre/masses relations is to a large extent a question of party/masses relations. The main reason for bad cadre/masses and party/masses relations lies in the lack of basic alterations in party lines. Some leaders and cadres use underhand means to arrange favorable positions for their children. Promotion, housing and other questions affecting the interests of the working masses are abused by these people for themselves and their relatives. These wrongful activities directly injure and destroy the moral of the working masses and directly harm the image of the party in the eyes of the working masses. Under such conditions, the workers desire with even greater fervour stricter surveillance of the cadres and leaders. A major reason for the insistent demands of the workers to introduce the workers' tribune system is that such a congress would provide them with a tribune to help them realize their democratic rights. These demands made by the working masses are very reasonable and fully in accord with the party's aim of achieving a high level of socialist democracy in China. China's cadres, especially those involved in the running of enterprises should take a serious and deep look at the workers' position, their demands and their voice and come to grasp the essence and significance of the CPC Central Committee and the State Council's move to realize the workers' congress system and should, with a high degree of political responsibility, move forward with the working masses to strive to realize the workers' congress system.

/II. Lay out and improve the regulations for the workers' congress system and ensure that the working masses fully enjoy the democratic powers set up for them within such a system./

Historical experience tells us that acquisition of correct knowledge, the establishment of a set of important principles and the transference of such knowledge and principles into the minds of the masses and getting the masses to accept them so that they become a part of the behavior of the masses, is often a repetitive and tortuous process of development. Democratic management developed as an important principle in the early 1950's in China and indeed the workers' congress system was put to a trial run in several enterprises. As a result of a variety of reasons the system had its ups and downs until after the 3d Plenary of the 11th National People's Congress the party officially produced the "Provisional Regulations for the Workers'

Congress in State-Owned Industrial Enterprises"—a decisive and significant step in the systematization and legalization of the system of democratic management. But the coming into being of these regulations did not solve everything, for the actual implementation of these regulations still requires a great deal of work. Every region, every department and every unit should draw up and complete feasible and detailed rules for the implementation of the regulations, based on the actual situation in which they are involved. In addition every article and every clause of the regulations should be made concrete so that when the workers in an enterprise make use of their democratic powers, there exist concrete methods to be followed. Without the application of detailed rules things laid out in the regulations cannot be implemented very easily, nor can investigations be conveniently carried out. For example, the regulations state that the workers' congress has the power to decide workers' housing distribution. In the course of implementation an enterprise can make this more concrete and based on the actual regulations and the realistic situation of that particular work unit, additional and subsidiary rules may be drawn up: 1) the workers' congress should discuss and decide those who are to sit on the housing committee and ensure that duties are carried out correctly based on the support of the principles drawn up by those who have faith in the masses; 2) conditions for housing allocation should be decided by the workers' congress; 3) concrete plans for housing allocation must be decided by the workers' congress and then announced to the workers. Such plans include how many houses are to be built, the conditions for housing allocation and who gets what. With these supplementary rules, the working masses are able to fully exercise their democratic powers in the allocation of housing.

After the publication of these regulations, the party Central Committee went on to publish "Provisional Regulations for the Working of Foremen in State-Owned Factories" and "Provisional Regulations for the Work of Chinese Communist Industrial Enterprises Grassroots Organizations." These three sets of regulations brought about new sets of rules for the internal leadership and management system in China's industrial enterprises. Questions such as how these three sets of regulations should be linked, how the workers' congress system, under the command of the party committee can be united with the foreman responsibility system under the command of the party committee within one single enterprise and how the party committee can command but not completely monopolize or take over all need more detailed and concrete regulations and should be incorporated into the restructuring of the economic system to gradually try to establish a complete system of rules and regulations.

Today, the workers' congress system has been spread throughout the country and in the process of carrying out this system the working masses must construct and advance. The new and fresh experiences that they have gained should be timely assimilated and propagated so that the workers' congress system can be improved on. In recent years some enterprises have taken the assessment of cadres as an important role and function of the workers' congress, and this is something which we should watch very carefully. Under the leadership of the party committee one electric locomotive repairs factory carried out cadre evaluation and assessment activities in their workers' congress throughout 1980 and 1981. The cadres of this factory felt there was no essential difference between cadres and workers and that one should not allow cadres to criticize workers without workers being able to criticize cadres. Cadres who originally had misgivings about such system now say that "The system whereby the workers' congress criticizes cadres is very good, for in this way both the cadres and workers are able to express what otherwise would have been suppressed inside themselves. They can then come to a mutual understanding and make forward progress. Working in this way everyone is able to carry out factory affairs much more successfully." The experiences of other work units who have also put such assessment programs into operation also suggest that strict assessment of cadres over a set period of time by the workers' congress is a very viable and feasible method of strengthening workers' surveillance of cadres and should be popularized throughout the country's enterprises. Of course, during the process of cadre assessment, the workers must be taught to correctly make use of their democratic powers and to correctly handle cadres' faults and mistakes. In situations where conditions are ripe, a transition must be made from the masses' assessment of cadres to the democratic election of cadres within specific limits.

/III. The working masses should actively participate in democratic life such as the workers' congress and ceaselessly strengthen their own ability to master their affairs./

The direct democracy that the workers' congress represents is an important component part of socialist democracy. Because socialist democracy is a new kind of democracy in the history of mankind and because of the lack of a democratic tradition in old China because of the rule of the exploitative classes, the ordinary masses lack training in democratic life. In addition to this, the 10 years of social chaos under the anarchistic rule of Lin Biao and the "gang of four" which tried to pass itself off as socialist democracy has still not been entirely cleared up. Thus today, China's working masses still lack experience in how to correctly and effectively make use of this new style of democracy known as the workers' congress to strengthen the democratic management of enterprise. The workers should concentrate on checking their own weaknesses in this area and actively try to learn and understand so that they may increase their own democratic accomplishments and strengthen their ability to be masters of their affairs. The past 30 years of cultural education has meant that the present cultural level of the working masses is much higher than it was during the early years of new China. Indeed, a certain level of cultural knowledge is a vital condition for a democratic life style. The advantage of our position is that our workers do not participate in management as separate individuals but participate in management by organizing together and collectivizing their knowledge and strength. Some people feel that while division of labor still exists in the present stage of China's development, the restrictions of the division of labor prevent workers from understanding enterprise production, administration and distribution and other facets of the overall enterprise situation. They feel that the workers do not possess the necessary skill and knowledge for such areas and for these reasons should not participate in enterprise management. Such an opinion is both incorrect and one-sided. For one thing, worker representatives possess the character of the working masses, meaning not only individual workers involved in production but also engineers and technological personnel, administrators, leading cadres and other work personnel. Of course, production workers represent the greater part. By organizing these people together and pooling their wisdom and strength it is often very easy to solve problems that individual cadres found insoluable and thereby ensure that decisions to major enterprise problems are in the best interests of the working masses and reflect in a more all-round and accurate way the regularity of objectivity. When Lenin discussed the task of developing socialist democracy he said: "We can complete this task, we can teach the infinite number of working masses to manage the state and manage industry, we can develop real work and we can destroy the deep-rooted prejudices that have existed for so long amongst the working masses, namely that administration of the state is a matter for the privileged few and is a refined skill." ("Complete Works of Lenin," Vol 28, p 405) Under the guidance of the party, China's working class is perfectly capable of coming to understand and learn the economy, politics, cultural and other social tasks necessary for administering the state.

Those workers elected as worker representatives should of course strive hard to learn and understand the knowledge and ability needed to be their own masters. On the one hand such representatives should make full use of their naturally intimate relationship with the working masses and should possess rich practical experience. On the other hand, they should actively learn the party line and party policies and the necessary knowledge for the administration and management of an enterprise, as well as the basic facts related to socialist democracy and the legal system. Only in this way can the worker representatives correctly and effectively exercise the democratic powers laid out in the workers' congress system and thereby live up to the trust and expectations placed in them by the working masses. Cadres and leaders on every level of the enterprise should make conditions favorable for the worker representatives to learn and establish necessary conditions for the fulfillment of their own duties. Workers' representatives should of course, without doubt consciously accept the correct guidance of the party committee and make conscious efforts to preserve the rightful authority of the foreman and conscientiously support the struggle against such incorrect phenomena as anarchy, out and out egosim and selfish departmentalism.

We believe that, fired by the enthusiasm of the party, the workers' congress system may be carried out and practiced more keenly and more widely throughout the country that the working class will play an increasingly important role in the establishment of a high degree of socialist democracy.

HOW TO STUDY THE FOURTH PART OF THE REPORT TO THE 12TH CPC NATIONAL CONGRESS

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 42-45

[Article by RED FLAG Editorial Office for Theoretical Education; passages within slantlines published in boldface]

[Text] The subject of establishing a high level of socialist democracy mentioned in this section is one of the basic aims and tasks of the new historical era of the party. Here we will look at the important content and basic principles involved in establishing this high level of socialist democracy. In studying this section we must grasp three major points:

1. The major significance of establishing a high level of socialist democracy.

2. The main content of establishing a high level of socialist democracy.

3. The relation between class struggle and establishing a high level of socialist democracy.

/In studying the first point, a deeper understanding may be achieved in two ways. 1) Why is the establishment of a high level of socialist democracy a fundamental aim and task; and 2) integration into reality and correct misconceptions concerning the question of democracy./

The report says that the construction of socialist material and spiritual civilization depends on the continued development of socialist democracy for support. One of our fundamental aims and tasks is to establish a high level of socialist democracy. The fact that the party has made the establishment of a high level of socialist democracy a fundamental aim and task arises from the fact that China is a nation where the people are masters of the state and our socialist cause is the common cause of all the people. Only with a high level of socialist democracy will it be possible to raise the masses' sense of mastery and allow them to fully exercise their powers in managing the state and to ensure that developments in all our undertakings conform with the interests, the will and the expectations of the people, and to ensure effective dictatorship over the handful of hostile elements who seek to destroy our socialist undertakings. In this way we will promote the smooth progress of the establishment of socialist cultural and spiritual civilization. Some comrades wonder why it is only a high level of democracy which is our fundamental aim and task and why not a high level of centralization as well. The reason is because the high level of democracy of which we talk relates to the question of the fundamental system of our country or state and the question of the position of the masses within the state. From a Marxist point of view, the most important and basic implication of socialist democracy is that the entire population should enjoy the highest degree of power for managing the state on the basis of the public ownership of the means of production. In the "Communist Manifesto" Marx and Engels pointed out that "the first step in the workers' revolution is to elevate the proletariat classes to the position of ruling classes in the struggle for democracy." ("Selected Works of Marx and Engels," Vol 1, p 272) Lenin said: "Democracy is a form or style of a state." ("Selected Works of Lenin," Vol 3, p 257) The Constitution of the PRC states that all the power of the PRC belongs to the people. Taking democracy as the fundamental state system, it cannot be placed along with centralization and thus "a high level of democracy" and "a high level of centralization" cannot be mentioned together. Democracy and centralization are questions of form of government and are thus also questions of organizing every level of government in accordance with the principles of a system of democratic centralization. Within these limits, we should bring about a link up between a high level of democracy and a high level of centralization and thus put into practice a high level of centralization on the broad base of democracy.

Since "a high level of democracy" refers first and foremost to a state system why then is the establishment of a high level of socialist democracy taken as only a fundamental aim and task? Why is no mention made of dictatorship? We should remember that China is run on a system of the people's democratic dictatorship. Such a system, as the report pointed out, ensures that the workers, who represent the vast majority of the population are masters of the state and also guarantees that efficient dictatorship is carried out against the small proportion of enemy elements intent on destroying the socialist cause. Today, class relations in China have already changed a great deal. The exploitative class has already been eradicated. Class struggle is no longer the major social contradiction and most social contradictions are now no longer of the nature of the class struggle. Because of this, we can use the principles of the system of democratic centralization to solve contradictions. Under such circumstances the establishment of a high level of socialist democracy and the development of democracy among the people both take on an even greater importance. The most important task of China's political construction is thus to develop the socialist democracy already established, both gradually and sequentially. The greater the development of the people's democracy, the greater the efficient dictatorship over the small hostile element within our society. Thus, making the establishment of a high level of socialist democracy the most important of our aims and tasks does not mean that the dictatorship over the small hostile element will be ignored; rather it includes such dictatorship.

Not everyone understands fully the importance of establishing a high level of socialist democracy. If we take a look at the class nature of China's system of the people's democratic dictatorship we can see that in historical terms it is the most democratic system and is incomparably superior to capitalist democracy. It is the democracy of the masses replacing the democracy of the small minority, it is true democracy replacing false democracy. As Lenin said, this new style of socialist democracy "is a hundred times more democratic than any bourgeois democracy." (Ibid., p 634) If one does not understand this, then one has not grasped the most fundamental things of a Marxist country's doctrines. But the system of socialist democracy and democratic life itself has a developing and constantly improving process to it. The several thousand years of feudal society in China have meant that economics and culture are fairly backward and lacking in democratic tradition. Despite the great work carried out by the party since the founding of new China in terms of establishing socialist democracy, the construction of a democratic system was seriously influenced by the later emergence of "leftist" errors. What was particularly disastrous to the socialist democracy were such counterrevolutionaries as Lin Biao and Jiang Qing who tried to set up a fascist so-called "total dictatorship." The result of this was that some comrades became very accustomed to any and all kinds of undemocratic phenomena and lacked the necessary faith in the development and fulfillment of socialist democracy. Since the 3d Plenary Session of the 11th Central Committee, the party has corrected these "leftist" mistakes and has continuously made the establishment of a high level of socialist democracy the most important aim, carrying out repeated mass education and making use of many large-scale measures.

Nevertheless, we should remember that the "leftist" influence has not been totally eradicated in terms of the establishment of socialist democracy and there are still many ideological barriers which must be overcome. Both the establishment of a people's system and the development of a democratic life style are very far removed from the demands of establishing a high level of socialist democracy and thus we still have a long period of hard work ahead of us. On the other hand the democracy problem is still being disrupted and attacked from the right. Some people cannot recognize the fact that socialist democracy is in its essential character incomparably better than bourgeois democracy, nor do they recognize that bourgeois democracy "is a heaven for the rich but a trap and a hoax for the poor and the exploited." Such people praise bourgeois democracy and freedom to the skies, speak of it highly without analysis and even oppose the four fundamental principles in order to laud the freedom of the bourgeoisie. If we allow such mistaken rightist thinking to spread unchecked, we will find ourselves in a situation of anarchy with a shattered, disunited political situation. These two incorrect ways of thinking are mutually influential. When we study we must take care to bring things into line with reality and take another step forward in overcoming these deviations and come to fully understand the importance of establishing a high level of socialist democracy and supporting the correct development of socialist democracy.

/In studying the second important point, we should come to a deeper understanding of the following four points on the basis of bringing together theory and practice. 1) Restructure and improve the democracy system and allow democratic life to pervade every area of society according to the principles of the system of democratic centralization; 2) the systemization and legalization of socialist democracy; 3) develop peace, unity and mutual assistance between races, based on socialist race relations; 4) continue to consolidate and strengthen patriotic unity./

All the power in our country belongs to the people and when exercising this power the people must follow the principles of the system of democratic centralization. The system of democratic centralization means centralization on the basis of democracy and the mutual bringing together and unification of democracy under the guidance of centralization. This is the fundamental guiding principle of completing the democratic system and developing democratic lifestyles. Only with centralization based on democracy can we correctly embody the interests and will of the people and only with democracy under the guidance of centralization can we ensure that the people will effectively exercise their democratic powers or rights. In the past, some people said that democracy and centralization were diametrically opposed to each other, saying that with democracy there was no need for centralization and with centralization there was no need for democracy, not understanding that the two are dialectially united. These one-sided and mistaken views create confusion in the support for the principles of the system of democratic centralization and they should be cleared up as soon as possible. Only if we carry out the principles of democratic centralization in full can we successfully restructure and improve the political system and the system of leadership in China and ensure that every level of the state organs is established on a broad democratic base and with a high level of centralization effective leadership and organization of socialist construction. Socialist democracy still needs to expand into every area of the people's political, economic, cultural and social lives. In order for the people to be masters of the state, not only must they exercise their powers in managing the state, they should directly enjoy differing degrees and different types of managerial powers in their participation in political, economic, cultural and social activities, so that on a broader basis and to a greater extent they may make use of democracy to govern themselves, educate themselves, and on the basis of the principles of socialist democracy establish and develop equality between people and correct relations between individuals and society. These, then, are all important for the establishment of a high level of socialist democracy. In order to establish a high level of socialist democracy we must strengthen the construction of the socialist legal system, so that socialist democracy is institutionalized and codified into laws. Institutions and laws are both fundamental, all-round, stable and long lasting. Only by firmly establishing the democratic powers used by the people to be masters of the society through legalization and institutionalization can we attain any definite guarantees for socialist democracy. No doubt, some of the mistakes we made in the past were connected with the incorrect ideology of some of our leaders but they were also undoubtedly connected to the fact that the democracy system and its legalization were not complete. Today, we have the ability and the need to strengthen the construction of the legal system and to establish and improve on all the various systems of democracy and to establish relevant political, economic and social rules and regulations so that the working masses may have a clear standard by which to carry out surveillance of the cadres as well as restraining their own behavior and pouncing on all illegal activities in every legal way possible, and thereby ensure good political, economic and social order.

With a fully institutionalized and legalized system of democracy the people will have laws they may depend on and a set of rules by which they may live. One of the most important principles of the socialist system of democracy and its legal system is that everyone is equal in the eyes of the law. If everyone works in strict accordance with the system of democratic centralization and the legal system, it may appear troublesome and restricting but in the final analysis it is beneficial to the people. Lawlessness appears very much simpler and more "free" but in actual fact it can only serve to help a small minority of degenerates. By amassing all the experience gained in this area, in particular that gained through the Cultural Revolution, the new party constitution clearly states that the party must act within the sphere of the constitution and the law. Everyone from the central party down to the grassroots level must act in accordance with the constitution and the law. Only by starting from the party body itself can we make the people understand the importance of a correct social attitude toward the legal system.

Further promotion of the socialist relations of equality, unity and mutual assistance between all our nationalities is another important aspect of the establishment of a high level of socialist democracy in China. Racial questions within a socialist epoch are basically a question of relations between working people of every race. In the past we have made mistakes with the question of race, especially during the Cultural Revolution with the broadening of the class struggle which did serious harm to many minority race cadres and working people. We did not attach enough importance to the question of autonomous powers for minority races. After the smashing of the "gang of four," and in particular since the third plenary session of the party committee, the party has done a great deal of work in implementing race policies and thereby restoring good race relations. China is a multinationality country founded and united with the joint efforts of many races. In addition to the Han race there are over 55 other national minorities making up 6 percent of the total population, with their homes covering between 50 and 60 percent of the total land area of China. Our socialist cause is the common cause of every race in China and only by activating all races and joining together can we speed up the modernization of the motherland. Mao Zedong said, "The unification of the country, the unity of the people and the unity of all the races of China represent the fundamental guarantee for the success of our cause." ("Selected Works of Mao Zedong," Vol 5, p 363) Based on Marx' racial theory and the realities of China's present situation, we should give attention to solving three major problems in our aim to promote racial equality, unity and mutual assistance:
1) autonomy of national regions: improve and strengthen the legalization of autonomy for national regions and ensure that party and national policies of autonomy are successfully implemented according to the realities of the situation in each national minority region and at the same time consolidate

democratic equality and unity between nationalities; 2) gradually eradicate inequalities between races in terms of politics, economics and culture and aid national minority regions to develop their economy and culture while actively striving to train and select national minority cadres; 3) recognize racial differences and nurture the special characteristics of each race. Handle racial contradictions carefully and oppose great nation chauvanism as well as local national chauvanism.

Another fundamental part of the move to establish a high level of socialist democracy in China is to consolidate and strengthen a united and patriotic front. According to Marx, only by liberating the whole of humanity can the proletariat class liberate itself. The importance that the party places on a unified line is on a par with liberating the whole of humanity. The united and patriotic line in China today is stronger and broader than it has been before. The party continues to support various policies along with other democratic factions and parties, such as "long-term mutual coexistence and mutual surveillance," and "show utter devotion and mutually share honor or disgrace," and in addition the party practices equal treatment of people outside the party as well as discussion of all affairs and mutual learning. This is a basic channel for strengthening the political alliance between party and nonparty and is in addition an important embodiment of the broadening of the great socialist democratic lifestyle. In our studying we must come to fully understand the importance of a united and patriotic line ruled by a strengthened party and the need to gradually eliminate the influence of "leftist" thinking while seriously implementing all possible policies related to a unified front.

/In studying the third important point we can concentrate on three questions in order to understand things more fully. 1) Fully understand the party's basic appraisal and basic direction in terms of the question of class struggle in the present historical stage of China; 2) the need to support the policy of "two hands" in this present historical stage; and 3) prevent and overcome two main types of errors and thereby strengthen the construction of socialist democracy./

Since the 3d Plenary Session of the 11th Central Committee the party Central Committee has made some estimates concerning the class struggle in China's present historical stage and as a result has come up with correct policy directions. After the destruction of the exploitative class as a class, class struggle was no longer the main contradiction of our society and thus we can no longer use the slogan "take class struggle as the key link." Nevertheless class struggle will continue to exist within certain limits because of various domestic factors and international influence and indeed may even sharpen under certain conditions. Practical experience tells us that this prediction is correct and tallies with the reality of the situation. Today, the sphere of the people is greater than ever before and now represents 99.9 percent of the total population. The target of our class struggle is that small percentage of the population which may be considered as an enemy element which is intent on the premeditated destruction of the economy, politics, ideology and culture as well as the overturning of the socialist system. The class struggle today is basically represented by the struggle of the people against this minority element. Such a small enemy element cannot hope now to represent a class in itself and thus the struggle against these few is not the same as the struggles in the past which were struggles of class against class. The activities of these elements reflect desires both within China and abroad to destroy the socialist cause and thus the struggle against them is of a very special nature. With this in mind we must clearly come to differentiate between contradictions between ourselves and the enemy and contradictions between the people, so as to avoid repeating the past mistakes of enlarging the scope of the class struggle. Thus we must prepare ourselves mentally for a long-term struggle and ensure that democratic dictatorship is exercised over these enemies and that a Marxist class viewpoint is upheld in handling the current social contradictions and other social phenomena that have the nature of class struggle.

We must support the continued implementation of the basic party policies in dealing with the question of class struggle and understand its importance for establishing a high level of socialist democracy in China. For it will ensure and help develop the democratic powers of the people as well as exercise effective dictatorship over the small number of enemy elements in our midst. Within China, one can still see the existence of class struggle and on the international scene we can still see imperialism and hegemony. Therefore, we must not ignore the function of dictatorship in China, or the construction of the people's army, police bodies, law courts and prisons and other such instruments of dictatorship. The strengthening of such tools of dictatorship is not contradictory to the establishment of a high level of socialist democracy, but is in fact an important guarantee of such a democracy, but is in fact an important guarantee of such a democracy. In our studying we should increase our understanding and correctly unify our thinking to fall into line with the scientific estimates and predictions and basic policies of the party in relation to the present stage of class struggle in China.

An important new phenomenon in the present class struggle is illegal activities in economic and other areas of life, which have arisen under the new policies in China designed to open the country up to foreign countries and enliven its own economy. Both foreign and domestic class enemies are using poisonous bourgeois ideology to carry out a destructive battle against us. Such serious illegal activities have already begun to erode our cadres, harm the party, the government and the army as well as the good name of the country. They are poisoning the people's thinking and polluting the social order as well as destroying economic construction and affecting social order and preventing the proper implementation of policies aimed at opening up to foreign countries and enlivening the economy.

Whether or not we can carry out a successful struggle against such illegal activities is related to the success or failure of China's socialist modernization program and the prosperity or decline of the party and the country. Because of the decisive policies undertaken by the party this struggle has already seen initial success. But because of specific historical conditions, the struggle will be a long one. Thus we have decided that during this new era of development of the socialist cause, we must use both hands. One hand supports the open-door policy and the move to revitalize the economy and the other hand supports the move to fight all illegal activities within economic and any other areas. Because of the illegal activities in economic and other areas, it is possible that less attention would be given to the open-door policy and the invigoration of the economy. On the other hand if we only concern ourselves with these invigoration policies then we ignore the struggle against illegal activities in economic and other areas. Both these possibilities are incorrect and should not be allowed to occur and thus in our studying we must link everything to reality and rid ourselves of these incorrect ways of thinking.

As far as class struggle is concerned, we must seek to prevent and overcome two main incorrect ways of thinking. Since the third plenary session the party has made several new tactical policies and in so doing has corrected the former mistaken policy of "taking the class struggle as the key link" and criticized the idea of "using the class struggle to study and analyze everything." Instead, the party has promoted the task of improving the system of socialist democracy and strengthening the legal system of socialism. This is entirely correct but some rightists misinterpret the party line and incorrectly believe that the class struggle no longer exists and that the class viewpoint of Marx is no longer applicable and even feel that the fight against economic and other types of corruption is not a class struggle. Even more serious is the fact that some people even turn a blind eye to the small number of bad elements and their illegal activities as well as the corruptive invasion of bourgeois ideology. Some people still have not rid themselves of the fetters of the concept of "making the class struggle the key point" and thus, with the appearance of economic corruption and the invasion of poisonous bourgeois ideology, they are unable to handle the situation correctly and feel that only with politicalization can the problem be solved. Such ideas as these are all wrong. In our studying we must link everything with reality and look at historical and present experiences. In this way we can strengthen our watch against bourgeois corruption and support the purity of communist education as well as overcome the rightist mistake of ignoring the existence of class struggle. Furthermore, we must respect the socialist legal system and use the weapon of the law to strike out at bad elements and thereby avoid a return to the old road of "taking the class struggle as the key link" and overcome "leftist" mistakes.

HOW TO STUDY THE FIFTH PART OF THE 12TH CPC CONGRESS REPORT

Beijing RED FLAG in Chinese No 20, 16 Oct 82 pp 45-48

[Article by RED FLAG Editorial Office for Theoretical Education; passages within slantlines published in boldface]

[Text] This part of the report expounds on the basic principles and policies of China's relations with other countries, the major questions of our relations with other countries at present and the important principles of developing the relationships between our party and other communist or working-class parties. In our study, we must grasp the following four main points:

1. The basic point of departure for our country to handle its relations with other countries.

2. The five principles of peaceful coexistence have consistently guided China in its efforts to develop relations with other countries.

3. Resolutely opposing imperialism, hegemonism and colonialism together with other Third World countries is our sacred international duty.

4. The important principles of developing relationships between our party and other communist or working-class parties.

/While studying the first main point, it is advisable to deepen our understanding in three aspects: 1) China's foreign policy fully reflects the integration of patriotism and internationalism. 2) We must have a further understanding of the correctness of our foreign policy by recalling the past and contrasting it with the present. 3) Adherence to an independent foreign policy must go through struggles./

China's foreign policy is based on Marxism-Leninism-Mao Zedong Thought. It proceeds from the fundamental interests of the people of China and the rest of the world and fully embodies the integration of patriotism and internationalism. Being patriots, in relations with other countries we must resolutely safeguard our national interests or dignity, and we definitely cannot tolerate any encroachment of them. Being internationalists, we must realize our national interests in the course of safeguarding the overall interests of mankind and definitely not infringe upon the overall interests of mankind for the sake of narrow national interests. Therefore, in international activities we must always have the overall interest of the world in mind, support all undertakings conducive to safeguarding world peace and promoting human progress and try our utmost to make our own contributions in this respect. In addition, as for the Chinese people who are struggling for socialist modernization, world peace and human progress are indispensable international conditions and a vehicle of support. In the past, we always stressed that aid among all nations was reciprocal and that the just struggles of the people of other countries have helped the Chinese people and in turn the Chinese people have also helped the just struggles of the people of other countries. In the future we will continue to support this view and act in such a way. It is precisely because the basic point of departure of our foreign policy is based on patriotism and internationalism that it is completely different from the diplomacy of capitulationism and humiliation which was pursued by the reactionary rulers in old China in the face of imperialist aggression and oppression, and is also completely different from the expansionist and hegemonist policies practiced by some big nations which rely on strength to overpower weak nations. It is an embodiment of the integration of patriotism and internationalism. On the basis of adhering to our persistent principled stand, flexible methods and steps are adopted in light of the development of and changes in the situation. In handling our external relationships, we uphold principles and also keep our promises and mean what we say. Being diametrically opposed to the practices which regard the intercourse between different countries as a political game or as playing "cards," in its dealings with other countries China always has a long-term stand and firm principles, follows an overall long-term strategy and is definitely not swayed by expediency or by any external pressure or by anybody's instigation or provocation. Our foreign policy has weathered all sorts of tests in the changing international situation and has gained prestige and made more and more friends throughout the world.

In order to have a deeper comprehension of our independent foreign policy, let us look back at the bitter history of more than 100 years after the Opium War in 1840 in which China was subjugated to the aggression of colonialist and imperialist big powers compelled China to sign unequal treaties by force of arms, willfully trampled upon our sovereignty, divided our territory and plundered our wealth; moreover, in order to exchange the recognition and support of the imperialists, the reactionary decadent Qing dynasty, the northern warlords and the KMT government would not hesitate to sell our state sovereignty and betray national interests. As a result, China became weaker and weaker and became impoverished. It was not until the founding of the PRC that this history of national betrayal and humiliation was thoroughly ended. After the PRC was founded, the Chinese people really stood up. China carried out an independent external policy, participated in discussing and resolving international affairs on an equal footing, continuously gained new and tremendous achievements in international activities and its international status rose rapidly. On the basis of the five principles of peaceful coexistence, China has in the past 33 years, since the founding of the PRC, established diplomatic relations with more than 120 countries, developed economic and commercial intercourse and cooperation in various fields with more countries and regions, and has thus provided our socialist construction with favorable international conditions. In the course of our study, we must have a deeper comprehension of the principles and characteristics of our foreign policy through recalling the past and contrasting it with the present and lay an ideological foundation for doing a further good job in the foreign affairs work and developing relations with other countries.

Under the present conditions, in order to adhere to an independent foreign policy it is still necessary to go through severe struggles. Internationally, the superpowers which carry out a hegemonist policy will always try to rely on their military and economic strength, which occupies a dominant position, to put pressure on China, menace the security of our country, interfere in our internal affairs and be unwilling to handle their relations with our country in an equal manner. The process of our adherence to an independent foreign policy is a process of struggling against hegemonism. Domestically, in a situation in which we follow a policy of opening to the outside world, in the dealings with foreign countries, some party members and cadres, seriously corrupted by foreign ideas, depart from the correct stand, lose moral quality and national dignity, infringe upon the state's interests to seek personal gains and even sell secrets and betray the motherland; still other people stubbornly worship foreign things and fawn on foreign powers and lose the national confidence and their self-respect. While studying we must proceed from realities, pay attention to waging struggle against this sort of phenomena and eradicate their influence.

/While studying the second main point, it is advisable to have a deeper understanding of the necessity of adhering to an independent foreign policy in social and ideological foundations; at the same time, it is also necessary to understand that the five principles of peaceful coexistence are not only applicable to handling our relations with countries having different social systems but are also applicable to handling our relations with socialist countries./

The five principles of mutual respect for sovereignty and territorial integrity, mutual nonaggression, noninterference in each other's internal affairs, equality and mutual benefit and peaceful coexistence have consistently guided China in its effort to develop relations with other countries. China first put forth and has persistently upheld these five principles which have opened up a new path of developing international relations. The characteristics of previous foreign relations were that big nations could bully weak ones at will; big nations could wantonly oppress small ones; some big nations and even one or two superpowers could dominate world affairs and manipulate the fate of the vast numbers of other countries. China has consistently held that all countries, whether big and small or powerful and weak, must be equal in the international arena and matters that concern the world must be jointly settled through consultation among all nations; that the sovereignty and integral territory of a country must be respected and no country whatsoever has the right to serve as an international gendarme or to brandish the baton and no country is allowed to occupy other countries' territories and interfere in the internal affairs of other countries. In past years, China has strictly abided by the five principles of peaceful coexistence and never occupied a single inch of foreign land, never infringed upon the sovereignty of another country or imposed an unequal relationship upon another country and has proclaimed that under no circumstances will it seek hegemonism. We have a solid social and ideological foundation in doing things in this way. In terms of social foundation, we have established in China the socialist system with the people being the masters of the country. This provides a social foundation for carrying out a peaceful policy in external work. There does not exist in China the monopolistic capitalist class which needs to grab super-profits in other countries or the militarist force which serves this class, so there is no need whatsoever for China to commit aggression against another country or to expand its territory. In terms of the ideological foundation, we uphold proletarian internationalism, firmly believe that "a nation cannot become free and at the same time continue to oppress other nations" and "no people on earth who enslave a nation can escape punishment." ("Collected Works of Marx and Engels," Vol 4, p 410; Vol 18, p 629) Therefore, in our external intercourses, we have all along strived for safeguarding unity and friendship among the people of all countries and will definitely not oppress and enslave another nation. We have persistently supported the struggle for liberation of the oppressed people and nations and are convinced that communism will ultimately be realized throughout the world and strictly follow the principle of "revolution cannot be exported." In accordance with the historical materialist viewpoint, only the people of the country concerned can decide the fate of their own country. The revolution of a country must rely on the political consciousness of the people of the country concerned and it cannot and also must not be forcefully imposed on the people from the outside.

The five principles of peaceful coexistence are applicable to our relations with all other countries. The report separately expounds on China's relations with Japan, the United States and the Soviet Union. Although conditions vary from country to country, our relations with them have a common spirit, that is, adherence to the five principles of peaceful coexistence. In his opening speech to the 12th CPC Congress, Comrade Deng Xiaoping pointed out: "While we Chinese people value our friendship and cooperation with other countries and people, we value even more our hard-won independence and sovereign rights. No foreign country can expect China to be its vassal, nor can it expect China to swallow any bitter fruit harmful to China's interests." This is an expression of the Chinese people's firm stand of upholding the five principles and safeguarding the interests of the motherland and national dignity.

In our external relationships, we uphold principles and wage appropriate struggle against the practices of those countries which deviate from the five principles of peaceful coexistence. This will be conducive to the consolidation and development of relations based on the five principles rather than damaging our normal relations with those countries. If we do not do so and further allow the phenomena which run counter to the five principles to develop unchecked, then the relations which have been established and developed will also possibly regress and even be in danger of heading for a diplomatic breakdown. Such are the relations between China and the countries which have different social systems from China's. In our relations with other socialist countries, on the basis of sharing identical goals and an identical basic stand and viewpoint, there will possibly emerge differing comprehensions and even differences of opinion on some matters, and therefore it is also necessary to solve the differences and contradictions of both parties concerned on the basis of the five principles of peaceful coexistence and through consultation based on an equal footing so that the bonds of friendship, unity and close cooperation can be continuously consolidated and developed.

/While studying the third main point, we must deepen our understanding in three aspects: 1) Opposing imperialism, hegemonism and colonialism is the common task of the people of all Third World countries. 2) The unity and cooperation between China and other Third World countries has a historical and practical foundation. 3) Mutual cooperation among Third World countries is of great significance./

One characteristic of the present international situation is that the old system of colonialism has disintegrated but its remnants are far from being eliminated; the imperialists and colonialists are still attempting to safeguard their vested interests in their former colonies and vassals. The superpowers that practice hegemonism pose a new threat to the people of the world. Their pursuit of global domination is the main source of instability and turmoil in the world. Therefore, opposing imperialism, hegemonism and colonialism and striving for complete equality and reason in political and economic relations among nations are the common demands and fighting tasks of the people of the world, and in particular the people of the Third World countries, and the most important task of the people of the world today is to oppose hegemonism and safeguard world peace. China is against all wars of aggression, including the world war being fomented by the superpowers, and all local wars of aggression which the superpowers instigate or back and regard supporting all victim countries and people in their struggle against aggression as its own international duty.

China belongs to the Third World and the unity and cooperation between China and the vast numbers of other Third World countries has a profound historical and practical foundation: 1) China has experienced sufferings similar to those of most other Third World countries. Historically, China and most other Third World countries were for a long time subjected to colonialist and imperialist aggression and oppression. In the struggle for national liberation, they stood on the same front line to oppose a common enemy and they went through thick and thin and enjoyed the joy of victory together. 2) China and most other Third World countries are faced with common problems: in the international political arena, they are menaced and jeopardized by hegemonism; in international economic relations, they are unjustly and unequally treated by the old international economic order; and domestically, they are faced with, to varying degrees, the problems of economic poverty and cultural backwardness left over by history. 3) China and other Third World countries are faced at present with common tasks:

first and foremost, they should defend their national independence and state sovereignty and actively develop their national economies so that they can back up their political independence with economic independence. With a common basis, we can share a common destiny with Third World countries and sincerely treat each other and cooperate in a friendly manner.

Mutual cooperation with Third World countries, and in particular economic cooperation, will contribute to breaking the old unequal international economic order. The so-called old international economic order is in essence an economic system under which the international monopolistic capital of the developed capitalist countries monopolizes the production, trade and finance of the world and exploits developing countries. Through the export of capital and transnational corporations--monopoly enterprises of an international character, the developed countries control the production of important products of quite a few developing countries and grab super-profits in developing countries. On the international market, in the trade between the developing countries which mainly export primary products and the developed countries which mainly export manufactured goods, the continuous widening of the scissors difference in exchange prices and the artificial forcing down of prices for many raw materials by the developed countries have made developing countries sustain a great loss. In financial and monetary fields, inflation and remittance fluctuations of the West have made foreign exchange reserves of developing countries suffer losses, and high interest and harsh terms on capital loans have added weight to the financial burdens of developing countries. In order to reform this old international economic order, apart from striving to solve problems through negotiation with developed countries (the South-North dialogue), developing countries are strengthening their mutual economic cooperation (South-South cooperation). This is of great significance. It is conducive to establishing a new international economic order based on genuine equality and mutual benefit as well as fairness and rationality and to promoting developing countries to self-reliantly and steadily get rid of the relationship of economically hanging on to the coattails of developed countries. From a long-term point of view, "South-South cooperation" has a broad prospect. Today China and many other Third World countries have been fruitfully putting an end to their respective economically and technically backward features. This is a new force in the world economy which has a reservoir of potential. If China is economically prosperous and flourishing, it will surely make more contributions to the development of "South-South cooperation" and the prosperity of the world economy.

/While studying the fourth main point, it is advisable to deepen our understanding of the important principles for our party to handle its relations with foreign communist or working-class parties in light of the historical experience of the international communist movement./

The principles for our party to handle its relations with other communist or working-class parties are in strict conformity with Marxism, adherence to independence, complete equality, mutual respect and noninterference in each other's internal affairs. This is not only a summing up of the historical experiences of our party in handling its relations with foreign communist parties but also an assimilation of the historical experiences, both positive and negative in the international communist movement.

The history of the international communist movement has told us that the socioeconomic conditions and political conditions of every country are complicated and multifarious. The problems of revolution in any country, such as strategy, tactics and organizational forms, should be decided by the country's communist party or other working-class party under the guidance of Marxist principles and in accordance with the country's actual conditions and they should be tested and perfected in the continuous practice of revolutionary work. The reason why the Chinese revolution could be victorious is because our party was good at integrating Marxist universal principles with the concrete practice of the Chinese revolution, that is to say, China self-reliantly defined its own line, principles and policies. In his opening speech to the 12th CPC Congress, Comrade Deng Xiaoping pointed out: "Both in our revolution and construction, we should also learn from foreign countries and draw on their experience. But mechanical copying and application of foreign experience and models will get us nowhere. We have experienced many lessons in this respect. To integrate the universal truth of Marxism with the concrete realities of China, blaze a path of our own and build socialism with Chinese characteristics--this is the basic conclusion we have reached in summing up long, historical experience."

The historical experience of the international communist movement has also proved that any attempt by one party (no matter how high its seniority and prestige are) to decide the internal affairs of other parties, to forcefully issue orders or to run the internal affairs of other parties will always produce poor results and can only lead to setbacks or failures in the revolutions of the countries concerned. In maintaining contacts among the communist parties of different countries, one must only rely on the truth of Marxism to convince others rather than resorting to administrative means. As for the practice of one party willfully interfering in the other parties' internal affairs and even compelling other parties to submit to it by force of arms, it can fundamentally run counter to proletarian international principles and undermine the very foundation of the international communist movement.

Of course, it is still quite necessary for all communist parties to exchange views and help each other on the basis of mutual respect and complete equality. Each party has its own strong and weak points. Each party is encouraged to learn from each other's successes and failures and draw useful lessons from them.

ATTENTION SHOULD BE PAID TO IDEOLOGICAL AND POLITICAL WORK AMONG EDITORIAL STAFF

Beijing RED FLAG in Chinese No 20, 16 Oct 82 p 49

[Article by Wen Zhao [2435 6856] and Che Yanming [6508 1750 2494]]

[Text] Comrade Liu Shaotang's article "Ideological and Political Work Among Writers Should Be Strengthened," which was published in RED FLAG No 13, 1982, raised a seriously acute problem: Among a very small number of people in literary and art circles, there exists an erroneous tendency to think very highly of oneself and feel cocky toward the party. The article states: "Only when ideological and political work among writers is strengthened, can we produce good works of literature and art, foster a good work style and promote the greater flourishing of socialist literary undertaking." We consider that the article's argument is extremely apposite. However, we have one point to add: We must also simultaneously strengthen ideological and political work among editorial staff and strive to heighten their sense of political responsibility.

A completed item of work, although it reflects the ideology and political tendency of its writer, it is nevertheless necessary to go through the medium of the editor to use the work to influence and educate the people. Therefore, editors must have a sharp ability to discriminate and a high level of sense of political responsibility. What kinds of work should be published and what kinds of work should not be published? This is a question of principle concerned with whether or not the party's literary undertaking can be safeguarded. It is a pity that in a few publications, some works of literature and art unexpectedly appeared which had a low style and even had extremely absurd content. These works seriously damaged our party's image and the image of socialist new people, brought pollution to the spiritual life of the masses of the people and had an extremely harmful influence on the vast numbers of readers. One of the important reasons why it was possible to publish these works is that some working editorial personnel failed to strictly examine and conscientiously distinguish these works, or they based their decision to publish the work merely on the reputation of the writer. It even happened that the publication of some works of literature and art was entirely due to the fact that the editor responded sympathetically to the thoughts of the writer.

We can see from this that it is not enough to strengthen ideological and political work among writers alone. While providing more effective party leadership in literary and art works and strengthening ideological and political work among the writers, further vigorous efforts should still be made to strengthen ideological and political work among working editorial personnel. Only in this way can we ensure the publication of more works which fill people with enthusiasm and can we restore and develop the glorious tradition of revolutionary literature and promote the greater flourishing of socialist literary undertakings.

Editor's note: After reading Comrade Liu Shaotang's article "Ideological and Political Work Among Writers Should Be Strengthened," Comrades Wen Zhao and Che Yanming proposed that "attention should also be given to ideological and political work among editorial staff." We consider their opinion to be quite correct. It must be said that their opinion is not only applicable to the editors of literary and art newspapers and editorials but also to the editorial staff in such fields as new publication and theoretical propaganda. In the last few years, great advances have been made in newspaper and periodical publication work and many comrades on the editorial staff have done their utmost to serve as a link between writer and reader and play the part of a discrete matchmaker. They have thus done a lot of work. However, there still exist some problems in editorial work. Apart from those things mentioned by Comrade Wen Zhao and Che Yanming in their letter to us, according to readers' letters, there are still a small number of people who hanker after the indulgence of all sorts of unhealthy practices, such as the "study of relationships." For example, a few people try their best to publish the manuscripts of their old acquaintances, friends and classmates, regardless of quality. And there is a tacit agreement between different editors that you publish my work and I will publish yours. Some editors even indulge in flattering each other in an unprincipled way. What is more, they act willfully in accordance with their personal tasks, viewpoints and tendencies, they abandon principles, act without regard for the consequences and so on. They do not, as they ought to, regard the newspapers and periodicals which they are involved in editing as the party's propaganda front. All these practices not only make the quality of publications inferior but also have a directly harmful influence on the readers. We are happy to see that this problem has aroused the attention of the departments and units concerned. Quite a few units have examined and summed up their own editorial work and are strengthening ideological and political work among the editorial staff in the light of their respective actual conditions. Through the examination and summing up work, the vast numbers of editorial working personnel have also acquired a deeper understanding of the glorious responsibility which they bear, and they are adding to their achievements, overcoming their mistakes and vigorously encouraging editorial professional morality so that together they can push the building of socialist spiritual civilization forward. Of course, intensifying ideological education among editorial staff is a long-term task. With regard to this question, this magazine wishes to encourage other fraternal newspapers and periodicals in our endeavor.

China Report

RED FLAG

No. 21, 1 November 1982

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

UPHOLD THE CONCEPT OF ONE DIVIDING INTO TWO; ATTAIN A STILL HIGHER GOAL

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 2-6

[Speech by Comrade Hu Yaobang on 27 December 1981 while meeting with representatives attending a national conference on the creation of films]

[Text] I am a rooter for ball games, a rooter for radio and television broadcasts, a rooter for the movie industry. In short, I am your avid supporter. Our comrades of all party committees and propaganda departments must assign such a task for themselves: to be rooters, to cheer everybody up.

Literature and art, like sports, have a broad mass character. We must organize and lead the people to use all means possible to boost anything which has a broad mass character, which is beneficial to the people, which can inspire and educate people to aim high and which is popular among the people. Because only by doing this can we prove ourselves to have what our party constantly claims as a mass viewpoint.

The year 1981 will pass and a new year will come in only 4 more days. How should we view our work this year and greet the new year? Let me present these remarks to you comrades: Uphold the concept of one divides into two; attain a still higher goal. If there should be a "dui lian" [a Chinese couplet often written and mounted on scrolls to be hung on the wall] for the new year, can these remarks be considered as fit for this purpose?

All our comrades must uphold the concept of one divides into two at all times. This is a conclusion reached at the meeting sponsored by the party Central Committee for the first secretaries of various provinces, municipalities and autonomous regions to review the work of this year. To view things with the concept of one divides into two, we can see, on the one hand, our party has achieved great progress in its work and the result has generally been good, but, on the other, we can also see that we have not been performing very well in other work, including that in which we ought to have done better, such as political and ideological work, [stabilizing the] commodity prices and so forth. How does literary and art work fare? I hope you comrades will have this issue analyzed with the scientific attitude of one divides into two so that the work next year will be done better.

As far as the movie industry is concerned, we must fully affirm that much progress was made during the past several years, and that new progress has been made this year. Therefore, good and generally acceptable movies have been the mainstream. This also tells that the majority of our comrades have been working very hard. Some middle-aged and young directors and playwrights have been maturing very quickly. Our workers, peasants, soldiers and intellectuals, our Communist Party members, CYL members and Young Pioneers, in short people of all nationalities throughout the country, male and female, young and old, people residing in cities and rural areas, are pleased with and welcome the accomplishments and progress achieved by the people of the movie industry and their hard work and contributions. They can see these accomplishments with their own eyes, and they will remember them and are thankful for them. This is what we usually mean as the rights and wrongs of a case will be judged by the public. This is a fact, and this is the kind of confidence we should have.

Of course, there is another side of the coin. This is to say that certain movies are really not good enough, that certain comrades have not worked hard enough, and that relatively serious shortcomings and errors still can be found in certain works and among certain individual comrades. The two main problems are simply thus:

First, the political sentiments of certain works and certain comrades are not healthy. Where are these unhealthy political sentiments reflected? They are reflected mainly in their attitude of ignoring, and even writing off, the great accomplishments achieved by the Chinese people in pursuing their socialist cause, and in their attitude of blaming the entire state, the entire revolutionary rank and file and the entire socialist system for the mistakes in our revolutionary process and for the destruction done by the Lin Biao and Jiang Qing counterrevolutionary cliques. Because of such attitudes, they conclude that communism has no future, and that communism is but a dim illusion. That is what I mean by unhealthy political thinking or political sentiments.

Why do we have to criticize Comrade Bai Hua? It is because his work "Unrequited Love" is unhealthy in political thinking and harmful to the people's minds. Things have now turned out very well since he has been criticized and since he has realized his mistakes and made a self-criticism. Comrade Bai Hua is still a party member and a writer, and he will continue to write. Comrade Bai Hua produced some good works in the past. We hope he will produce more good works. People can see from this case that the party Central Committee's policies and ways of doing things are vastly different from those in the past, and these differences have demonstrated that our party has indeed learned a beneficial lesson from its mistakes and setbacks and has become more mature.

There is no doubt that we must convincingly and seriously criticize erroneous things. Here, we must adhere to truths and never try to save face. It is best that one conduct self-criticism earnestly instead of shielding a shortcoming or fault. The comrades, readers and audience must help him. This is not only true for writers, but also true for the responsible comrades of our party committees at all levels. Can we criticize the Standing Committee members of the party Central Committee's Political Bureau and the comrades of the Secretariat if they have committed mistakes? Naturally we can criticize them. We can even criticise Comrade Mao Zedong's errors. Why can't we criticize ourselves, if we commit mistakes? For our great cause, whoever makes mistakes in our revolutionary ranks should be criticized or told to conduct self-criticism. However, we must face facts, be good to others and pay attention to science and policy. We must not wantonly criticize people. Perhaps some comrades would say that one's enthusiasm will be affected once criticism has started. We say: It all depends on what kind of enthusiasm you have. If it is the kind of enthusiasm detrimental to the socialist cause, should we not dampen this kind of enthusiasm? This kind of dampening would help the healthy enthusiasm to further develop at the same time.

Second, some comrades have failed to attain a lofty realm of thought in some of their works. Their realm of thought is even very low. Where does this phenomenon manifest itself? Mainly, it shows up when they are unable to correctly handle the relations between love affairs and the revolution and between love affairs and the socialist cause, while inappropriately overemphasizing the love affairs.

Naturally, love affairs constitute an important theme in literature and art. We not only may write on this theme, but should write on this theme. I had mentioned this at the symposium on script writing held last year. Who says that we cannot write about love affairs? They represent an integral part of human life and an important phenomenon in social life. The question is what role we let love affairs play. All communists, revolutionaries and patriots should be even more broadminded and farsighted. Ardently loving only our great motherland, our great people and our socialist cause is most valuable. If we can classify our sentiments of ardent love into number one, number two and number three, the number one should be this type of ardent love. Literature and art in the socialist period should be much more progressive than that in the new democratic revolution period. First of all, our literary and art works should educate the people, particularly the young people, to love the socialist cause of the motherland and our people. Fundamentally, love affairs should be identical with the revolutionary cause. For the people's interests and for the socialist cause, a revolutionary should be able to completely sacrifice one's own love affairs and even life, if it is necessary to do so.

People still remember the Hungarian poet Petofi's famous poem: "Life is indeed valuable, but the price of love is even more valuable. However, for the sake of freedom, I can give up both." For the nation's independence and the people's freedom in the motherland, this democratic revolutionary in the mid-19th century was able to attain this kind of lofty realm of thought. How can our socialist literature and art today retreat to the realm of thought where love is considered as something supreme? We should not let love between the sexes overtake the revolution and prevail over the revolution. Nor should we give publicity to love being the noblest and doing everything for the sake of love. Our literary and art works should always be aimed at broadening the people's spiritual realm and at encouraging and inspiring the people to dedicate themselves to the socialist modernization of the motherland.

Only by upholding the concept of "one divides into two," will it be possible for us to attain a still higher goal. In the next year, not only must you attain a higher goal, you must alwo work hard to attain a higher goal in doing the work of our party and the work of all trades and professions. You said that in the next year, you would produce 100 feature films. This is fine. However, the question is what kind of feature films. Everyone believes the quantity of 100 feature films should be ensured. The quality of these films should also be better than those produced in 1981. It is, therefore, necessary for you comrades to work harder than ever to conscientiously solve the series of questions in the realms of ideology and art and in all fields of your work.

As for economic development, there must be a practical and "unexaggerated" growth rate next year. This means a certain quantitative as well as a strict qualitative requirement or combining of quantity with quality in this regard. I think this requirement is also completely applicable to film production.

If we make no big mistakes, adopt a scientific approach and go all out to push the national economy forward, it will be possible gradually to accelerate the improvement of the people's living standards a little bit. However, generally speaking, it will not be quite possible for our living standards to catch up with those in the most economically developed countries in the next 50 years or until the 2020's or 2030's. Let us review some history. China was gradually reduced to a semicolonial and semifeudal society since the middle of the 19th century. After more than a century, a tremendous social change took place in China in the middle of the 20th century--China entered the period of socialism. It might take another century or so for a fundamental and tremendous socioeconomic change to occur in our country so that China will be among the advanced of the world--or such a change might not take place until the middle of the 21st century. Therefore, the course of social history has determined that we Chinese have to bear more hardships in this century and the next. What is so serious about bearing some hardships? Difficulties and hardships will help you succeed in your undertakings. This century and the next will be the two centuries in which the Chinese nation will bring about tremendous changes and make tremendous progress.

Such historical development and changes require our comrades to conscientiously experience all kinds of hardships and tempering. After this difficult historical stage, our nation will have a bright future. This is the realm of thought in which our minds are emancipated. Such a realm of thought is one of revolutionary romanticism and revolutionary realism. Is this not realistic? We must be determined to work hard in the next five decades to make China a modern, powerful socialist country with political stability, economic prosperity, developed education and high ethical standards and to make our country really stand up. This will be a close integration of revolutionary realism with revolutionary romanticism. Could one be called a revolutionary realist if one disregards the nature of historical development and regards the people's cause and ideals as worthless or devoid of any merit? That is shortsighted, naturalistic and indicative of a declining mentality.

Comrades, this question concerning the realm of thought is one of a fundamental character and characteristic of the times. Among our people, party members and cadres, there will definitely be more and more people who firmly believe that our country will effect a tremendous change or progress from disorder to order and from poverty to prosperity and who conscientiously work hard for this purpose. Now some people eagerly look forward to this, others are half believing and half doubting and still a very small number of people determinedly oppose such a tremendous change and progress and want to go backward. This requires us to turn our party's correct lines and objectives, through our ideological, political, theoretical, propaganda, literary and art, journalistic and educational work, into the firm will and conviction of large numbers of party members, cadres and people, into the ideas, consciousness and public opinion of hundreds of millions of people of various nationalities and into their actions. There will be no future for our literature and art if they do not serve this purpose. If our writers and artists fail to stand ahead of the times but stand aside and only write, perform or sing something about the "wind, flowers, snow and moon" and "love," or if they stand behind the times and only write, perform or sing something "miserable" or which is "unbearable to recall," then, what future will they have? There will be no future at all for those who stand opposed to use and distort and curse the revolution with a mentality marked by antipathy and gloom and with the language of hatred, and they are bound to be cast aside by the people. Of course, this does not in the slightest degree mean that ugly phenomena in our social life cannot be criticized. We have said on several occasions that they can and should be criticized. The question here is what stand you take and your frame of thought.

Comrade Xia Yan has just asked me to say more about the question of study. I think this is an extremely important question. The question of restudy faces not only you in your profession but also the whole party and people of all nationalities throughout the country, including us. Of course, the division of work in society varies from people to people. However, there are common yet different requirements for people in study. As far as writers and artists are concerned, I think that they must step up their study of Marxism, social life, culture, science and history.

Marxism, which came into being more than 100 years ago, has its rich theory of literature and art. But this does not mean that authors of classical works of Marxism have provided readymade answers to all questions about literary and art work. Our study of Marxism today is for no other purpose than guiding our artistic practice with the Marxist stand, viewpoint and method. We should strive to attain a higher ideological and a higher artistic level and to integrate the one with the other or to merge them into a single whole. Only in this way will we be able to greatly raise our realm of thought and to promote social progress in a particular way.

I do not know if you have read Comrade Wang Chaowen's "The Concept of Aesthetics" and some other comrades' aesthetical works. I have read some of the book but have not yet finished it. I feel that there may be some shortcomings in all books on aesthetics, but they still can help us understand some concepts or common sense of aesthetics so that we can avoid detours in this regard. Now some of our comrades do not pay sufficient attention to theoretical questions, and ~~our~~ achievements in the theory of literature and art are very few indeed.

Writers and artists should go deep into the realities of life in order to observe, experience and analyze persons and social phenomena of various ~~kinds~~—this is a prerequisite for our literary and art creation. If a writer does not do so, he can only fabricate stories according to his subjective needs. Take the plot of having a love affair in a tank for example. People only have to ask this: Since the number of personnel assigned to a tank is limited, how can another person be added to it so casually? Gorkiy once sincerely advised a young writer: Do not write anything in a hurry but study it first. He also said: One must pay attention to reality in order to portray new life vividly and effectively. There are three kinds of realities—the past reality, the present reality and the sketchy reality of the future.

In studying science, culture and history, one must pay particular attention to language. I think it necessary to remind comrades, especially young comrades, to pay close attention to this matter.

"A writing that is devoid of literary grace will not last long." This is quite right. It shows that a writing devoid of literary grace and refined language cannot touch people to the heart. This is an extremely important experience. Literary language is an art. A work without literary grace definitely has little vitality. Please take a look at Lu Xun, Guo Moruo, Mao Dun, Ba Jin, Gao Yu, Lao She, Zhao Zhuli and other literary giants of modern times. Is any of them not a great master of the art of language? However, it appears that some young comrades have not paid close attention to this matter. If one does not have sufficient literary accomplishment and is unwilling to study some classical Chinese poems and prose, his writing will be insipid and devoid of the effect of touching people to the heart. If one goes on like this, how can one do one's job?

Certain comrades mentioned the movie "Bosom Friend." I think a movie like this can be produced. Cai E indeed rendered outstanding service in the struggle of overthrowing Yuan Shikai during the old democratic revolutionary period, and Xiao Fengxian can be regarded as a woman with foresight and courage. However, I do not know whether the movie's playwright and director read Xiao Fengxian's elegiac couplet for Cai E. The first part of the couplet reads: "Over the boundless horizon in the south, you ascended like a roc that wings skyward, lifted by the cyclone. How can I, a survivor of a chaotic world, bear the fact that our union has become a mere dream?" The second half reads: "During your several years of stay in the north, I pitied myself for having led an aimless life. But after having you, a hero, as my bosom friend, what is fleeting will be remembered forever." You can see that this couplet, which mentions Cai's lofty ambition and Xiao Fengxian herself, as well as her relationship with Cai, has a fairly deep perception and literary grace. I hear that it was written by a literati in Xiao Fengxian's name. Nevertheless, it has a certain literary value. I think it would be nice if the movie "Bosom Friend" used this couplet as its theme and even used its words for the lyrics of a theme song. From this we can see that we must continue to brush up on history and culture. If our works have a correct theme and tell a touching story with a rich, graceful language, they certainly can powerfully educate and inspire our people.

Some comrades maintain that our movies, like ball games, should be up to the standard that they can compete with other countries on the international movie scene. I think this issue must be analyzed because we will lose our bearings if it is not clearly analyzed. Nowadays, the international sports tournaments are matches of athletic skills conducted under unified competition regulations and judging standards that are internationally acknowledged. In light of these regulations and standards, who wins and who loses can be clearly distinguished, and the results, which do not have a class character, are spontaneously recognized by the whole world. However, literature and art, including motion pictures, are different. It is one of the ideological departments that has a strong class and social character. The same literary and art work may be judged differently, or even diametrically, by different people because of differences in their social status and world outlook. Of course, different peoples and different countries can and should learn from each other in the field of artistic forms and skills of their literature and art. All the positive results from the literature and art of all nations will contribute to mankind's cultural development. In the final analysis, however, whether our literature and art has a great vitality depends only on whether it meets the needs for the progress of people of all nationalities. Therefore, the goal of struggle of our literature and art is not what it can accomplish internationally, but how it can penetrate the hearts of the broad masses of Chinese people and become a powerful spiritual weapon that can arouse hundreds of millions of Chinese people to struggle for socialist modernization. If our literature and art really attains this goal, it has expressed its major international significance. If our own culture can be developed and thrive healthily in a great country like China, which has one-fourth of the world's population, and if our people will emerge in the world as a highly civilized nation, it will be an inestimable contribution to and a tremendous motivating force in the world's cultural development. Is it possible then that this will not be recorded in full detail in the cultural history of the world?

In short, in the interest of our country and people, we must heighten our spirits, rise up and be ready to exert sustained and strenuous efforts to build a stronger and more prosperous country. We must also emulate the Chinese women's volleyball team's spirit of winning glory for the motherland and the people. Some comrades say that their burden is heavy and they already feel the "pressure." I think this is good. When tap water cannot reach the upper floors of tall buildings, it is because there is not enough pressure. There must be some pressure, but, of course, it should not be too large. In the final analysis, we rely on our legs in order to attain a still higher goal. Whether our legs can make large steps depends on how loyal we are to our motherland, the people, the party and the socialist cause.

This meeting is being held quite successfully. I propose that a meeting like this be held every December. The meeting should be larger so it will be attended by directors, playwrights and some performers and singers. The purpose for settling the general account at the end of the year is to be prepared for the fighting during the new year. Let me repeat what I said: We must wage a hard struggle in order to attain a still higher goal!

CARRY ON THE STUDY OF THE 12TH CPC CONGRESS DOCUMENTS IN A DEEPGOING WAY

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 7-8

[Article by Shi Youxin [2457 0645 2946]]

[Text] Vast numbers of cadres and the masses are studying the documents of the 12th CPC National Congress. People are in high spirits in this study. All localities and authorities at all levels have effectively and rapidly mobilized leading cadres to explain and publicize the documents and train backbone members in propaganda work. Many comrades believe that this represents a good beginning for deepening understanding, unifying thought and putting into effect the spirit of the 12th party congress.

The congress documents, in a concentrated way, reflect the will of members of the CPC and the whole nation and express their ideals. Therefore, these documents have a strong appeal. These scientific and programmatic documents, different from other ordinary work reports, offer a regularized summation of the active practice led by our party both in reviewing our previous work and in planning our future work. For this reason, our theorists, journalists, educators and personnel engaged in party and government work are all required to explain, give guidance, make expositions and give proof so as to help cadres and the masses to study the documents well, have a good command of the spirit and unify thought in order to arouse the people of the whole nation to go all out and struggle with one heart and one mind for the realization of socialist modernization.

Now, in the wake of the publishment of the documents, we can see that a great variety of material for study, guidance and reference has also appeared. Apart from being carried by the press, this is also being published in pamphlet form. This demonstrates the great efforts made by propaganda workers and their initial achievements. However, a new problem has also arisen in this good situation. Such a large volume of things emerging before readers will simply confuse them and they will simply be at a loss over which to choose as reference and which to read as the primary source, as people's ability to make judgments is different and their time and energy are both limited. How can we achieve good results in our study? This is a question that we must take seriously. Now, some comrades are not concentrating on the study of the documents. They only skim through the documents and believe that they have fulfilled the task.

Some even fail to finish reading the whole document, and then they turn to summary and guidance material and take this in place of the documents. This is a method of "putting the cart before the horse." This will not achieve good results.

Comrades in charge of organizing the study should pay attention to this problem. They should really help everybody concentrate on the study of the documents. If people only have superficial knowledge and fail to master the essence, the study will be fruitless. Study is a painstaking mental labor and requires real efforts. Glancing over something once or twice cannot be considered as finishing the study. Moreover, having studied something does not mean that one understands it and understanding it does not mean having a good command of it. The requirement for the study of the 12th congress documents should be not only able to understand them, but also to have a good command of the essence of spirit. To this end, we should, on the basis of reading the documents carefully and thoroughly, require different people to take different approaches in the study. Some can take notes of one paragraph after another; some can write their viewpoints on various questions; and others can compare the documents with other documents and make an analysis so as to deepen their understanding. When encountering difficulties in the study, we should think them over by ourselves and then read some selected guidance and reference material. Focus points should be selected in the study of the documents. Material beyond the documents should also be tackled after being selected. The method of using the same strength to tackle all problems and extensive reading is inadvisable.

It is necessary to oppose both "leftist" and rightist deviations in connection with our real thinking. To really achieve good results in the study of the documents, it is necessary to relate what we have learned with our own thinking, especially our thinking since the 3d Plenary Session of the 11th CPC Central Committee, and check whether there is something in our minds that hinders the implementation of the 12th congress spirit. It should be noted that some remnant influences of "leftism" have not been thoroughly eliminated in our work. For example, in dealing with class struggle, some people think that the slogan of "taking class struggle as the key link," is correct also as we embark on hitting at serious economic crimes or try to dish up this slogan in a new form. In approaching the relationship between politics and economy, some people are keen on reviving formalism and empty talk in political work when we stress the importance of political and ideological work and they dish up again some imprecise or unsuitable viewpoints, such as, "place politics in command" and "politics must take precedence over economy." In dealing with intellectuals, some people do not recognize that intellectuals constitute a reliable strength, as do workers and peasants in building socialism, and they continue to cling to the outdated proposition and policy of "unite, educate and reform." In approaching education, science and culture, some people indiscriminately stick a label of bourgeoisie on all of these and set them against laboring people; they flaunt the ignorance and backwardness that history leaves to the laborers as the true color of the proletariat. At the same time, in actual life, there also exists the rightist tendency of deviating from and even negating the four cardinal principles. We must also struggle against the bourgeois liberalist tendency and never relax this struggle. How can we give up necessary criticism and struggle against the erroneous viewpoint of negating that our country has been a socialist society, the pessimistic and negative arguments that merely look at the dark side of our society while we deny our bright side and the superiority of our socialist system and the practice of propagating the old formulas and slogans of the bourgeoisie by sticking some "communist" terms on them? All this constitutes obstacles to the implementation of the 12th congress spirit. Without clearing up these obstacles, how can we really master the essence of the documents' spirit? In short, we must carry out an ideological struggle on the two fronts against both "leftist" and rightist deviations and avoid focusing on the criticism of one erroneous tendency to the neglect of another.

It is necessary to link the study of the documents with the study of basic theory of Marxism. At the 1st Plenary Session of the 12th CPC Central Committee, when talking about the study of the 12th congress documents, Comrade Hu Yaobang pointed out: "We should first do our best to master the basic spirit of the documents and associate this with the relevant basic theory of Marx, Lenin and Comrade Mao Zedong so as to unify our thinking." This is a very timely and important instruction. Principles and policies adopted by the 12th party congress are all in keeping with the laws of historical development and the people's demands. Their ideological and theoretical foundation is laid on the basic theory of Marxism. Without the knowledge of the relevant basic theory, we will not have a profound understanding of the essence of the 12th congress documents' spirit. Of course, we cannot lay aside the 12th congress documents to study those basic Marxist works. Rather, the study of the Marxist basic works should serve the study of the 12th congress documents.

On the basis of having a profound understanding and a good command of the spirit of the 12th congress documents, we should try our best to relate our study with reality of our units and solve some resolvable problems in a methodical way. We are faced with the great task of creating a new situation in all fields of socialist modernisation. We should seriously consider how to create a new situation in our respective work, what to initiate and what to reform. We should persist in the practice and measures that are in line with the principles and policies laid down by the 12th party congress and strive to overcome existing shortcomings and deficiencies. Through study, we should review the experiences in our work. This will help us better understand the 12th congress documents and more conscientiously and firmly implement the principles and policies decided by the 12th party congress.

The key reason why the study in the previous period was carried out in a down-to-earth way is because leaders at all levels have taken the lead in the study. In order to conduct the study in a more effective and lively way, it is suggested that leading cadres should be prepared and give relevant answers to the people's questions, should join the discussions with the masses and if different opinions exist, they can also take part in debates. In this way, with the exchange of ideas between leaders and the masses, the study will be filled with vigor and will be led to a more profound degree.

PARTY BUILDING AND THE PROGRAM FOR CREATING A NEW SITUATION IN ALL FIELDS

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 9-13

[Article by Zheng Hui [6774 1920]]

[Text] The correct program and the series of principles and policies for creating a new situation in all fields of socialist modernization outlined at the 12th party congress constitute a fundamental basis for all fields of work in China's socialist construction in the years to come. They also constitute a fundamental basis for party building, particularly the consolidation of party organizations to be launched very soon. Here, I would like to discuss my impressions on the guiding role of Comrade Hu Yaobang's report on strengthening party building.

I

In his opening address at the 12th party congress, Comrade Deng Xiaoping pointed out that to integrate the universal truth of Marxism with the concrete realities of China, blaze a path of our own and build socialism with Chinese characteristics--this is the basic conclusion we have reached in summing up long, historical experiences. Referring to socialist development, the new party constitution pointed out in the general program section: "The development and improvement of the socialist system is a long historical process," and "the cause of socialism is advancing and is bound to triumph gradually throughout the world along paths that are suited to the specific conditions in each country and are chosen by its people of their own free will." An important principle of scientific socialism has been advanced here. It provides people with a good deal of valuable enlightenment to correctly understand socialism.

For a long time in the past there has been an oversimplified notion about socialism to the effect that after establishing the socialist system according to a fixed pattern, we can develop it speedily or easily into a perfect and ideal state. The facts are just the opposite. Socialism, this brandnew social system in human history, was first established in a number of countries which were relatively backward economically and culturally and the conditions of which were extremely complicated. Its development can never be uniform or smooth sailing. In the course of practicing socialism, we are bound to go through many difficulties and setbacks and many even commit grave errors. Under the conditions when serious errors have been committed and tremendous setbacks exist in some specific systems, the superiority of socialism cannot be fully or notably brought into play. Marxism has brought to light the general laws governing socialism in historical developments. Only by integrating the universal truth of Marxism with the concrete realities in their own countries and finding the correct paths that are suited to the specific conditions in their own countries is it possible for communists in various countries to achieve successes in socialism. Therefore, socialism will advance to common victory on a world scale through various forms and paths. It will be impossible to attain good results by indiscriminately copying the experience or patterns of foreign countries without maintaining independence and keeping the initiative in our own hands or by imposing one country's experience or pattern on others. Under the guidance of Marxism, all roads lead to communism. This is a historical trend in the contemporary world communist movement.

Our party has succeeded in solving the questions of choosing a path for the democratic revolution suited to China's specific conditions and for the socialist transformation of the means of production. After the socialist system was established in an all-round way, our party was confronted with a completely new and more difficult and complicated problem of breaking a new path for socialist construction that is suited to China's national conditions. Everybody knows that in the course of solving this problem, our party has made painstaking efforts and paid a heavy price. After going through a tortuous path, we are now embarking on a new journey of historical development. The 12th party congress represents a great milestone of this new journey. The documents, such as Comrade Deng Xiaoping's opening address at the 12th party congress, Comrade Hu Yaobang's report to the 12th party congress and the new party constitution, are the banners guiding our victorious advance. The documents comprehensively and penetratingly expound the basic contents of socialist economic, ideological, cultural and political construction, their respective status and their relationships with one another in accordance with guidelines of the party's general task in the new historical period. These expositions have taught us that the four modernizations are the focal point of the whole party's work and the basis for solving international and domestic problems. At the same time, great efforts should be made to build a high degree of socialist spiritual civilization and socialist democracy. Building socialist spiritual civilization and socialist democracy is both an important aspect of our fundamental objectives and tasks and an important guarantee for building socialist material civilization. The building of the three aspects are closely related with, and promote, one another. All these constitute a complete program for building socialism as proposed by our party. They also represent an enormous progress our party has achieved in the course of integrating the universal truth of Marxism with the concrete realities of our country and in its protracted efforts to explore a socialist path with Chinese characteristics.

Just as Comrade Deng Xiaoping said: In comparison with the time of the eighth party congress, our party has gained a much deeper understanding of the laws governing China's socialist construction and acquired much more experience. At the time of the eighth party congress, the situation in launching all-round socialist construction developed very speedily and our party was not adequately prepared in both theory and practice. The line of the eighth party congress was correct. However, it failed to mature or solidly establish itself and, consequently, failed to prevent the occurrence of serious errors in a later period. History has profoundly educated the whole party. From the 3d Plenary Session of the 11th CPC Central Committee to the 12th party congress, our party systematically summed up the historical experience, both positive and negative, since the founding of the PRC and finally reached a new scientific plane in understanding the specific conditions of Chinese society and ways to build socialism in accordance with China's specific conditions. Naturally, we cannot say that we have satisfactorily and thoroughly solved this problem. Many principles and policies still remain to be further perfected, substantiated and revised. However, it should be said that the basic path is correct. This is indeed of decisive significance to the growth and prosperity of our party and our socialist cause.

Comrade Mao Zedong set forth, expounded and proved the idea of the close relationship between our party building and party political line. More than 30 years' experience of party building since the founding of the PRC has once again confirmed this idea. In the period of democratic revolution, party building was closely interrelated with the party's task of dealing with the united front and armed struggle. Similarly, in the period of socialism, party building is also closely interrelated with the party's task of dealing with the socialist modernization program. When the party correctly formulated and implemented the line for building socialism, the party invariably developed and made rapid progress. Conversely, when there were some deviations in the party's line, particularly when such a serious error as the "Cultural Revolution" occurred, great damages were likewise done to party building. Now, our party has led the people in achieving a great transformation of historic significance and has formulated a correct program for socialist modernization, thus providing the most important and fundamental guarantee for the party's victorious development. In the course of creating a new situation in all fields in the years to come, our party will certainly be able to make our ranks purer and stronger in light of implementing the correct political line and, consequently, shoulder our historical missions more satisfactorily.

II

In accordance with the specific conditions and requirements of the new historical period, the party constitution has set forth in the general program the three basic requirements that should be met in strengthening party building: 1) A high degree of ideological and political unity; 2) wholehearted service to the people; and 3) adherence to democratic centralism. What should be done to meet the three basic requirements and raise party building to a new height in relation to the socialist modernization program set forth in Comrade Hu Yaobang's report to the 12th party congress?

A high degree of ideological and political unity constitutes the first of the three basic requirements. The unity referred to is a unity based on the basic political and ideological principles and Marxism. In the past, when the "leftist" errors held a dominant position within the party, normal debates on different views among comrades within the party were regarded as a serious struggle of line and as class struggle. Excessive means of struggle were used to enforce an erroneous ideological and political principle. This inflicted grave damage on the cause of the party and the people. We should never repeat this historical error. However, we should not negate the extreme importance of party leadership with the errors committed by the leaders of the party; neither should we negate the important principle of upholding a high degree of ideological and political unity in the party with the pretext that there has been a lesson of enforcing unanimity within the party under the erroneous guiding ideology. The problem is that we should rely on the improvement of the party's ideological and theoretical level, the maturity of its political experience, the soundness of its democratic centralism and the development of its democratic life to ensure ideological and political unity in the party based on Marxism. In view of the fact that the party has formulated a correct line and that inner-party life has been increasingly restored to normal, it is perfectly necessary and entirely possible for us to meet this requirement. In his report to the 12th party congress, Comrade Hu Yaobang has summed up our experience in effecting a great and historic change over the past 6 years. An important experience is that, on some major ideological and political questions of principle, the CPC Central Committee has waged appropriate struggles on two fronts--against both the "left" and the right deviation, and maintained the scientific character and unity of the party's guiding ideology. Without this scientific character and without this ideological and political unity, there would not be such a good political and economic situation as we have today. This truth is clear to all.

The socialist modernization program set forth by the 12th party congress has correctly handled the relationship between socialist economic construction, on the one hand, and socialist ideological, cultural and political construction, on the other. It has correctly handled the relationship between the contradictions among the people and those between the people and the enemy in the present stage of socialism as well as the relationship between the state, the collective and the individual. It has correctly handled the relationship between the actual conditions and present policies of socialism, on the one hand, and the ideological system and lofty ideals of communism, on the other. These are important problems which our party has, for many years in the past, strived to solve but has not been able to solve well. In handling these problems, the "leftist" errors have invariably driven an aspect of contradiction to extremes and handled it in a completely reverse and nonsensical manner, thus degenerating into serious idealism and metaphysics. The ideological and political unity enforced according to this "leftist" errors can only be formal or false unity, which inevitably damaged the party's fine tradition of seeking truth from facts, discredited socialism and dampened the enthusiasm of numerous party members in pursuing the communist ideal. The current correct program set forth by the CPC Central Committee has broken completely with the "leftist" errors in the past and has also made a clean break from the rightist deviation. To achieve political unity within the whole party with this program will enable the whole party to greatly raise its Marxist level, be firmer and more energetic in its current socialist practice and fully confident in the long-term prospects of future communism.

In its efforts to bring order out of chaos in all fields in the past few years, the CPC Central Committee has, first and foremost, promoted ideologically the Marxist vitality of daring to make innovations and inventions and discarded all viewpoints which have been worshipped in the past and which have been proved through long-term practice to be incorrect. It has applied basic Marxist principles and formulated principles and policies in accordance with objective conditions. It has also constantly improved and perfected the content of the present principles and policies through practice. The process in which these principles and policies have taken shape is one of constant development from practice to knowledge and from knowledge to practice, and one of repeated development of from the masses to the masses. There is no end to practice and there is no end to learning. The guiding ideology of the party is in a state of lively movement. Therefore, the high level of ideological and political unity which the new party constitution calls on the whole party to maintain is by no means a rigid and mechanical uniformity but a vigorous and lively unity based on correct integration of theory with practice and of leadership with the masses. This is a fine tradition which has taken shape in our party for a long time and which our party now pays particular attention to promote.

A primary factor in achieving a high level of ideological and political unity is to step up our study. The party constitution stipulates that all party members, particularly party cadres, should conscientiously study Marxism-Leninism and Mao Zedong Thought, essential knowledge concerning the party, and the party's line, principles, policies and decisions and acquire general, scientific and professional knowledge. They should go deep into the realities of life to conduct investigations and studies and be good at waging struggles against various erroneous tendencies inside and outside the party. In his report, Comrade Hu Yaobang stressed the necessity of vigorously stepping up the education and training of cadres. He regarded this as a strategic measure for improving the quality of cadres. We should carry out the training of cadres according to this guideline. Provided that party members and cadres achieve notable successes in their studies, the whole party will be able to have a common language on major ideological and political issues and further lead the masses.

III

The second basic requirement for strengthening party building set forth in the new party constitution is that party members should serve the people with heart and soul. Our party has always regarded service to the people as its sole purpose. It has always stressed that the words and deeds of party members should conform to the people's interests, for this is the highest criterion. In the protracted and ruthless armed struggles and underground struggles in the past, our numerous party members feared no sacrifices and fought bravely for the liberation of the Chinese people, displaying a high level of communist consciousness. After the party becomes a party in power leading the political power of the state, by relying on the political power, it is able to work for the interests of the people on a larger scale and degree. On the other hand, the leading status of the party also subjects it to the danger of divorcing itself from the masses and of abusing its power. Once this danger becomes a reality, the damages done to the interests of the people will be much more serious than an error committed in the revolutionary war period. The "Cultural Revolution" precisely serves as a profound lesson. It was the outcome of a fault in the building of party in power and was in turn a cause for the huge wound inflicted on the party. Due to the great damages done to the party politically, ideologically and organizationally in the decade of domestic turmoil, the phenomena of using public office for personal gain among some party cadres was fairly serious. Through consolidation of party organizations over the past few years, conditions have greatly improved in the party. However, the contradictions of whether serving the people or seeking personal gain have not been completely solved or have not been solved at all among many party members.

Comrade Hu Yaobang's report comprehensively analyzed the present condition of our party and set forth several problems that we should concentrate on solving in party building at the present stage. The party is reforming the leading bodies; leading cadres of the party at various levels are engaging in cooperation between the old and the new and the succession of the old by the new. The party demands that large numbers of young and middle-aged cadres be promoted to various leading posts in good time and that veteran cadres who have been relieved of their heavy responsibility in "front line" posts continue to shoulder the tasks of passing on experience, giving help and setting an example. The party demands that the young and middle-aged cadres who have been newly promoted to leading posts modestly learn the skills needed in economic and construction work and, with the spirit of doing pioneering work, score outstanding successes in their work. The party also demands that party organizations at various levels and the numerous party members establish close ties with the workers, peasants and intellectuals and step up work with the masses. In view of the fact that the existence of impurities in ideology, style and organization within the party is not suited to the new situation and tasks, it is therefore necessary to conduct an overall consolidation of party organizations over a period of 3 years. In a nutshell, the solution of all these problems will enable party organizations and party members to dedicate themselves with the spirit of serving the people with heart and soul in socialist modernization. Just as Comrade Hu Yaobang said: "We must lay stress on getting every member to understand clearly the character, position and role of the party and to realize that all party members have only the duty to serve the people diligently and conscientiously, and no right whatsoever to take advantage of their power and positions to 'fatten' themselves at the expense of the state and the masses." The members of a party in power have many favorable conditions and opportunities to use public office for personal gain, to benefit themselves at the expense of public interests or to "fatten" themselves at the expense of the state and the masses. In order to be a qualified party member, one should never be allowed to "fatten" oneself like this. In many of its articles, the new party constitution has made specific provisions on this question. This is also an important aspect showing that the requirements for party members and party cadres in the new period are more exacting than before.

Party members should have the idea of wholehearted service to the people. This is determined by the character and tasks of our party. Our party is the vanguard of the Chinese working class and its ultimate goal is the realization of communism. With the exception of the interests of the working class and the broadcast masses of people, the party does not have special interests of its own. The communist social system that the party wants to establish is the most advanced and superior social system in human history. Under this social system, the relationship between men and the relationship between the individual and society should be a completely new type of social relationship. Does the individual or society hold supreme? Is all for the individual or is the individual subservient to society? This is a fundamental factor distinguishing a new society of public ownership from the previous society of private ownership. In a communist society, there are ample and good conditions to ensure personal development and satisfy personal interests. However, personal interests must be subordinated to the interests of society and personal development must be adapted to the development of society. In the initial stage of communism, it is likewise necessary to establish the fundamental principle that society should protect the individual and the individual should submit to society. It is different from the higher stage of communism only in some respect of its specific contents. Therefore, the idea of wholehearted service to the people is a communist idea reflecting a new type of social relationship. An important component of building a high degree of socialist spiritual civilization is to develop this advanced idea and this new type of social relationship. If, in ideological building, our party does not put forward the requirement of wholehearted service to the people, the party's role of main support in the building of spiritual civilization in the entire society is out of the question. Neither can we use these contents to influence and educate the broad masses. Naturally, our party has invariably stressed that it is necessary to strictly differentiate publicity of the communist ideological system from the current program of action and the present policies. At the present stage, in economic and social life, we should uphold the system of distribution according to work and other social systems. We should demand that all members of society become communists. However, if, in the previous new democratic stage, our party was able to influence the masses with its communist spirit and win victories, are there any doubts about the necessity for party members to firmly acquire the idea of wholehearted service to the people today, when the party has stressed the building of socialist spiritual civilization as a fundamental objective of socialism?

IV

The third basic requirement for strengthening party building set forth in the new party constitution is adherence to democratic centralism. With respect to the stipulation of the party's basic principle of democratic centralism, the new party constitution is an improvement on all previous constitutions and is fuller in content. This is a special feature of the new party constitution.

In his report to the 12th party congress, Comrade Hu Yaobang also concentrated on expounding the importance of strengthening democratic centralism and further normalizing inner-party political life. Now, the political life of the CPC Central Committee and many local party organizations has been restored to normal. This represents a major progress. However, undemocratic practices and patriarchal ways still have not been eradicated in many organizations, and cases of decentralism and liberalism exist to a serious extent. We must concentrate on solving this problem when we strengthen the party organizationally in the days to come.

The party's democratic centralism reflects, in essence, a new type of political relationship within the party in the organizational system. In a socialist society, there is a new type of political relationship among the people and there is also a new type of political relationship within the political party of the working class. The 12th party congress pointed out that great efforts should be made to build a high level of socialist democracy and that it is necessary to establish, in accordance with the principle of socialist democracy, a relationship of equality between men and a correct relationship between the individual and society. Within the Communist Party, there should be a higher standard and stricter demand for this political relationship. All party members enjoy rights within the limits prescribed by the party constitution, discharge the duties of membership and observe a unified discipline. There should be equality in these basic respects. The duties and limits of authorities of the higher party organizations are different from those of the lower party organizations, and the duties and limits of authorities of party organizations are different from those of party members. In their mutual relations, there are differences between the leader and the led. However, these differences in work and posts do not mean that there are differences between the honorable and the lowly, between the high and the low. Politically, there is complete equality between them. Through the implementation of democratic centralism, the party develops truth and rectifies errors, thus attaining unity and unification of the party on the basis of Marxism. This new type of political relationship cannot be mentioned in the same breath with the feudal autocratic system and bourgeois liberalism. The organizational system of the party's democratic centralism has been established on the basis of this new type of political relationship; the improvement of the functioning of democratic centralism invariably promotes the development of this new type of political relationship.

When referring to the reform of the system of leadership and the leading organs, Comrade Hu Yaobang, in his report, also concentrated on expounding on the correct solution of the question of party leadership over government organs and over enterprises and institutions. It was pointed out in the report that it is necessary to achieve a proper division of labor between the party and the government and between party work and administrative and production work in enterprises and institutions. This is a major question concerning how the party can correctly bring into play its leading role. The new party constitution has for the first time made a clear stipulation in this respect. A good solution of this problem will enable CPC committees at various levels to extricate themselves from routine administrative work and strengthen party leadership ideologically and politically and party building so that the administrative and production departments can do their work actively, independently and concertedly, thus bringing their usefulness into full play. This problem also involves the establishment of a new type of socialist political relationship of democracy and equality between the party and the nonparty masses. We should regard it as a fundamental principle for building socialist spiritual civilization and socialist democracy and solve it conscientiously, gradually and rationally.

We should improve the functioning of democratic centralism and reform and improve the party's system of leadership in state life so that our relationship within the party and outside the party may develop soundly and so that we can create a political situation in which we have both centralism and democracy, both discipline and freedom, both unity of will and personal ease of mind and liveliness. By that time, there will be unlimited prospects for the cause of socialist modernization.

THE BASIC POLICY OF ATTAINING A HIGH LEVEL OF SOCIALIST DEMOCRACY

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 14-18

[Article by Lu Zhichao [4151 0037 6389]]

[Text] Like building a high level of socialist material and spiritual civilization, building a high level of socialist democracy is one of the fundamental tasks and targets of our country's people in the new historical period. Since the 3d Plenary Session of the 11th CPC Central Committee and under the leadership of the CPC Central Committee, extensive publicity and discussions have been carried out on the theory of building a high level of democracy, and many practical reforms with far-reaching significance have been made. The democratic system in our country, damaged in the past, has been restored and developed. However, building a high level of democracy is an arduous task and requires a long process of struggle. Discussions held in the past few years show that there exist different and even opposing views on many questions concerning democracy. These different views involve the understanding of the nature of socialist democracy and of questions such as democracy and dictatorship, democracy and centralism, the democratic system and democratic life, democracy and the legal system, democracy and party leadership, and so on. In his report to the 12th party congress, Comrade Hu Yaobang gave in principle clear answers to these questions. The "report" is the guiding policy for building democracy from now on and at the same time it should also form the basis on which we increase our understanding and unify our thinking.

I

In the sections concerning the building of democracy, the "report" first makes clear the nature of socialist democracy in our country and expounds the relationship between democracy and dictatorship.

The word democracy has many meanings and is often used to signify different things. According to the Marxist point of view, democracy is first of all a question of state system. Lenin said: "Democracy is one sort of state form, one of its patterns." ("Selected Works of Lenin," Vol 3, p 257) In history, the replacement of the feudal system by bourgeois democracy was a great step forward. However, bourgeois democracy is only democracy for the exploiting classes, a very small percentage of the population, and it is a trap and a fraud for the proletariat and other laboring people. Bourgeois democracy is in essence bourgeois dictatorship but the bourgeoisie has never admitted this. After leading the broad masses of the people in seizing state power, the proletariat set up the dictatorship of the proletariat, or the people's democratic dictatorship. Since this kind of democracy is for the laboring people, who account for the overwhelming majority of the population, and dictatorship is exercised only over a very small number of exploiters and hostile elements, the proletariat and the laboring people can openly announce that they must exercise dictatorship over the people's enemies while practicing democracy among themselves. As long as class struggle still exists, we must not deviate from Marxist theories on class struggle and on the state when examining and handling issues concerning democracy.

The basic Marxist views on democracy mentioned above have been repeatedly expounded in the party's documents in the past few years. The following questions can be explained on the basis of these views: First, democracy, which is a form of state structure and state system, also involves dictatorship. Therefore, when our party calls for building a high level of socialist democracy, it is at the same time calling for strengthening and consolidating the people's democratic dictatorship. Only by developing a high level of democracy can we effectively exercise dictatorship and ensure the smooth progress of socialist construction. It is one-sided and wrong to separate democracy from dictatorship, thinking that calling for a "higher level of democracy" means ignoring dictatorship over the enemy, or that stressing the necessity of exercising dictatorship over the enemy means restricting democracy. Second, as a state system, socialist democracy is won by means of revolutionary struggle under the leadership of the proletariat and is not established on the principle of the minority submitting to the majority. Moreover, after establishing this democratic system, a handful of class enemies who oppose socialism cannot be treated on the principle of the minority submitting to the majority. The principle of the minority submitting to the majority only applies to the question of how to exercise state power among the people. We must understand that class relationships come before relationships between the minority and the majority among the people under a democratic system. Otherwise, confusion will occur. Third, viewed from the essential nature of state power, socialist democracy, we say, is incomparably superior to bourgeois democracy. As Lenin said, it is "millions of times" more democratic than bourgeois democracy. ("Selected Works of Lenin," Vol 3, p 634) This is because in our socialist country, although the democratic system and democratic life have not yet been entirely developed or perfected the proletariat and the laboring people are already in the ruling position and are masters of the country. On the other hand, in the capitalist countries, even in the most democratic ones, the broad masses of the people are still being ruled and exploited. If we forget fundamental class relationships and compare our democracy with bourgeois democracy only in terms of concrete systems and forms, serious ideological confusion will occur.

Some people may ask: Since socialist democracy is of a higher type, why do we still say that our democracy is not extensive enough and why must we set ourselves the target and task of building a high level of democracy? This involves another aspect of the meaning of democracy. In the above discussions, we talk about the nature of state power, that is, state structure. Here, we will talk about the administrative system, that is, the form of organization of state power, the building of the democratic system and the development of democratic life. In this sense, our democracy is really not good enough and building a high level of democracy will involve a protracted process.

Socialist democracy is a new type of democracy meaning that the whole of the people manage the state. Since the socialist system has a short history, the task of building a high level of socialist democracy has not yet been accomplished in any country. Besides, accomplishing this task in China will involve special difficulties. China went through a feudal period lasting several thousands of years and it lacks democratic traditions. In the past, we did not pay enough attention to developing democracy either. So a lot of time is needed to make up for this. Besides, we have little experience in this respect. Under these circumstances, we can only accomplish the task of building a high level of democracy through systematic, unremitting and protracted efforts to carry out the modernization program and to build socialist spiritual civilization. It is not realistic to expect quick results or to attempt to do everything at one go.

In short, with regard to the question of building a high level of democracy, we must distinguish between the two different meanings of democracy and at the same time we must realize that they are closely linked. The proletariat and the laboring people have seized state power and set up the people's democratic dictatorship. This is the prerequisite for developing the democratic system and democratic life. Without state power, there will be no democracy for the laboring people. On the other hand, developing a highly democratic system and life is an important condition for upholding the people's democratic dictatorship. Without these, the power of the whole people to manage the state will never be fully realized or guaranteed.

II

As far as the development of the democratic system and democratic life is concerned, our task in building a high level of socialist democracy, according to the report to the 12th party congress, involves the following main aspects:

1. The key to developing a high level of democracy is to continue to reform and improve our country's political structure and the structure of its leadership in accordance with the principle of democratic centralism, and strengthen the building of organs of state power at all levels. The purpose of this work is to enable the people to better exercise state power and to enable government organs to lead and organize the people in building socialism.

All our state power belongs to the people. However, it is impossible for a billion people to directly grasp and exercise state power together. They must do so by means of government bodies composed of their representatives. Lenin said: "We cannot imagine democracy, even proletarian democracy, without representative institutions." ("Selected Works of Lenin," Vol 3, p 211) In our country, the organs through which the people exercise state power are the National People's Congress and local people's congresses at all levels. This system of people's congresses organized according to the principle of democratic centralism, is an administrative system suited to our country's conditions, and a form of organization of state power capable of giving full expression to socialist democracy. Reforming our country's political structure and the structure of its leadership does not mean changing this basic system but reforming specific systems and forms of organization which have drawbacks and defects in order to improve this fundamental system day by day. There are two aspects of these reforms. With regard to the political system, they include strengthening the power of people's congresses and their respective standing committees at all levels, strengthening the functions and powers of the State Council and the people's governments at all levels and strictly implementing the responsibility system, abolishing the lifelong tenure system for state leaders, improving the election system and the supervision system of the masses over state cadres, and so on. Regarding the structure of the state's leadership and leading organs, these reforms are mainly aimed at overcoming problems such as overcentralization of powers, cadres concurrently holding too many posts, excessive numbers of deputies, overlapping organizations, duties and responsibilities not being clearly defined, overstaffing, mixing up the party's work with that of the government, bureaucracy and inefficiency. The essence of this work is to reform irrational cadre systems and to ensure that the ranks of cadres gradually become more revolutionary, younger in average age, better educated and more professionally competent. Reforms in this respect are more specific but very important parts of the reform of the political system.

The crucial question in this kind of reform is to implement the principle of democratic centralism comprehensively, from top to bottom. On the one hand, the power of state organs at all levels must be based on extensive democracy and these organs must really represent the interests and will of the people and enable the people to exercise their power. On the other hand, these organs must exercise the necessary centralism based on democracy so that they will become authoritative and effective and will be able to effectively lead and organize socialist construction. Centralism based on democracy is an inevitable means and form for realizing democracy. Some people think that calling for the building of a "high level of democracy" means ignoring centralism, while others think that centralism restricts democracy. They do not really understand the system of democratic centralism.

Of course, as a democratic political system, democratic centralism must first of all adhere to the principle of the minority submitting to the majority, and embody the views of the majority. However, in the work of our state organs, the principle of democratic centralism should at the same time become a kind of work method and work style. This kind of work method and work style is appropriate and complementary to the democratic nature of our political system. In the past, we often regarded centralism based on democracy as merely a work method and work style and were not conscious that it was first of all a system. Of course, this is wrong. However, it is also a one-sided view to deny that at the same time democratic methods and style are necessary for a democratic system.

2. Socialist democracy is not merely a kind of political system. It should also be extended to various aspects of the people's political, economic, cultural and social life. This is an important part of developing a high level of democracy and an important expression of the superiority of socialist democracy over capitalist democracy. First, in addition to exercising their right to run the state by means of people's congresses at all levels, the people, as masters of the country and the society, must also directly enjoy rights of management to varying extents and in various forms in the political, economic, cultural and social life in which they participate. Only in this way can they give full play to their enthusiasm and initiative. Our country is so big that democracy will not exist in an all-round way if people only enjoy the former right. Second, democracy implies equality. In order to develop all-round socialist democracy, we must also establish, among the people and according to the principle of democracy, equal political relationships between man and man, including equality between nationalities, equality between man and woman, equality among citizens before the law, relationships between citizens and the state and social rights and duties. We must ensure that these relationships will become political guiding principles which people must observe, and ideological habits. This is an important part of building democracy and at the same time an important part of building socialist spiritual civilization. Third, in order to attain the goal mentioned above, democracy should also become a way for the people to carry out self-criticism and learn democratic, collective and communist ideology. A democratic method is one of discussion, criticism and self-criticism, persuasion and education. This is a method which was created by our party and the revolutionary ranks led by our party long ago and has been effectively used to raise the people's ideological consciousness and to resolve contradictions among them. Since the founding of the country, it has also been popularized among the whole people and very good results have been obtained. We must also see that without using the democratic method and raising the people's consciousness everywhere, the building of the socialist democratic system and the development of democratic life are not guaranteed.

We must closely link the building of socialist democracy with the building of the socialist legal system and systematize and legalize socialist democracy. With regard to this question, there exist two confused ideas. The first is thinking that it is insufficient to stress only the building of a "high level of democracy" because this will make some people ignore the law and social order. The second is thinking that the law restricts democracy and that stressing the building of the legal system will restrict the development of democracy. Both of these ideas result from the same mistaken view of democracy not as a system but as anarchy under which one may do as one pleases and the legal system is not regarded as a guarantee for democracy but as a restriction to it. These ideas set democracy against the legal system in two different aspects. Neither the nature of socialist democracy nor the functions of the socialist system have been correctly understood. As a matter of fact, if we understand the correct meaning of socialist democracy and clarify the relationship between democracy and dictatorship, democracy and centralism, and the democratic system and democratic life, we will understand that socialist democracy is a political system and a social order which most conforms to the interests and desires of the whole people and is the most healthy and rational political relationship and habit of life. The socialist system only consolidates it in a legal form. Harming the people's interests and social order, and anarchy under which one may do as one pleases, are forbidden by the law because they undermine democracy. The nature and functions of socialist democracy and the socialist legal system are essentially the same. The task of building a high level of democracy put forth by our party includes improving the socialist legal system.

Why should we then put forward the idea of closely combining the development of democracy with that of legal system? This is because socialist democracy is the content and foundation of the socialist legal system while the socialist legal system reflects and guarantees socialist democracy. Socialist democracy, whether as the essence of a country and the form of organization and mode of activities of state power, or as a guiding principle for the people's political relations and political life, should be written into law by the organs of state power (including constitutional and general laws). These laws must be observed by everybody, and compulsorily enforced by the organs of state power. Only in this manner can socialist democracy become an authoritative, firm and unshakable system. The degree of perfection of the socialist legal system marks the level of maturity and development of socialist democracy. Therefore, strengthening democracy and perfecting the legal system are two organically related aspects of the task of the development of a high level of socialist democracy.

The report to the 12th congress sums up our achievements in developing the legal system and puts forward our task for the future. Since the 3d Plenary Session of the 11th CPC Central Committee, our party has summed up and drawn on historical lessons, begun to pay attention to developing the legal system and scored remarkable achievements. As a result, we have put an end to the idea and situation of "despising all law and authority" and set up initial rule by law. The draft of the new constitution soon to be examined and approved by the National People's Congress will in particular open a new phase in the development of our country's socialist democracy and legal system. It will provide an essential basis for extensive legislative work in the future. Our party's task for the future is to continue to lead the people to formulate and perfect various kinds of law while strengthening its leadership over the administration of law, strengthening education in the legal system and ensuring by various means the strict enforcement and observation of the law of our country.

Judging by the present situation, the latter task is even more important. This is because at present many of our people lack the concept of a legal system or are ignorant of the law. Our youth in particular is even more ignorant about the law and its meaning. Quite a large number of our party members, including some of our leading cadres fail to see the significance of developing the legal system. Some of them even have a "special privilege" mentality and think that the law is formulated for common people, not for them. This is why there still exists the malpractice of failing to act according to the law or to strictly enforce it. In order to put an end to this malpractice, we should first carry out education in the legal system among all our people. In particular, we should educate and supervise the broad ranks of our party members and cadres and tell them to take the lead in observing the constitution and the law. We should begin with our broad ranks of party members and cadres, make every citizen understand the law and the obligation to observe the law and set up a practice of doing everything in accordance with the law throughout our society. Second, we should strictly enforce the law. The key to this is the actual implementation of the principle that every citizen being equal before the law. We should not allow any organization or any individual to have the privilege to transcend the constitution and the law. Our party should steadfastly safeguard the power of the judicial organs in independently exercising their authority and performing their duties. It should encourage and support the judicial workers in enforcing the law in an impartial and incorruptible manner. It should crack down on any practice of bending the law for the benefits of one's relatives or friends.

III

Our country's socialist construction, including the construction of the material and spiritual civilizations and the development of a high level of democracy must be carried out under the party's leadership. The task, theory, principle and policies of developing a high level of democracy have been put forward by the party and must be gradually carried out under the leadership of the party. The question of whether we accept the leadership of the party is the key to the question of whether we will be able to develop our democracy along a socialist path. Recognition or otherwise of the party's leadership is the demarcation line between the socialist concept of democracy and the various kinds of erroneous bourgeois and petit bourgeois concepts of democracy. A very small number of people propose breaking away from the party's leadership, advocate a kind of "absolute democracy" divorced from the party's leadership and even raise the banner of fighting for democracy and freedom against the party. These people proclaim themselves or are called by others in flattery "fighters for democracy." In fact, their thoughts and actions hamper and impair the development of socialist democracy.

It is common for our comrades to have some muddled perception of the relationship between the development of democracy and the leadership of the party. Some think that since democracy means all the people being the masters and making decisions according to the principle of the minority being subordinate to the majority, it seems that we should not stress the party's leadership. Otherwise, we will go against the principle of "democracy." This view treats the principle of the people being the masters and the majority making decisions as being abstract and absolute and thus distorts this principle. The party's leadership means using the revolutionary consciousness of the advanced class and the science of Marxism-Leninism to clearly point out the correct path of revolution and construction, enlighten the people, readjust their relationships, correctly sum up the interests and will of the people and unite and guide more and more masses in conscientiously carrying out the struggle for their own fundamental interests. The party is an indispensable tool for the people to win their final liberation that has emerged in the revolutionary struggle of the proletariat and the masses of people. Without the leadership of the party, it would have been impossible in the past for the people to overthrow reactionary rule and win democracy; without the leadership of the party, it is impossible at present for the people to correctly and effectively exercise their right as masters. A little recollection of history and a little consideration of reality will enable us to realize that without the leadership of the party, it would be impossible for the people to exercise their right as masters in dealing with problems which are relatively wide in scope or complicated, let alone problems related to revolution and construction among millions of people. Therefore, a democracy that throws away the leadership of the party cannot be a socialist democracy. It only means worshipping the spontaneousness of the masses and being the tail of the masses. It will inevitably result in going against the will of the majority and harming their interests.

However, the party's leadership involves mainly the formulation of the correct line, principles and policies and the gradual raising, through ideological and political work and the exemplary and guiding role of party members, of the people's awareness and the work of guiding them in fighting for their own interests. The party does not exercise its leadership over the people but among them. Just as it was impossible in the past for the party to act single-handedly to seize state power in place of the people, it is impossible now for the party to exercise the people's right as masters in their place. It can only organize and support the people in exercising their rights as masters. In the opinion of some comrades, the party's leadership conflicts with democracy and democracy is at best nothing but form. This has given rise to ideas and activities of neglecting the development of the system of democracy and failing to observe the law approved by the legislature of the people. By so doing, they will inevitably become divorced from the masses and weaken and impair socialist democracy and the legal system. Moreover, when the party's leadership commits mistakes and encroaches on the people's interests in dealing with some problems, we will not be able to promptly correct it. We have learned very profound lessons on this in the past. We should understand that the party is a part of the people. The party leads the people to set up the system of democracy and formulate the constitution and law. This system, constitution and law embody both the party's line, principles and policies on the one hand and the whole people's common interests and will on the other, reflecting the fact that the party's leadership and the people's exercise of the right as masters coincide. Therefore, the party must take the lead in implementing and observing this system, constitution and law. The "report" particularly stresses the principle that "the party must act within the scope allowed by the constitution and law." It demands that the activities of all party members and organizations including both the central and the basic levels must be in accordance with the constitution and law of the state. This shows that the party takes the lead and respects the people's rights. As for the activities of some cadres who, under the pretext of exercising the party's leadership, use their power of office to pursue their private interests and privileges and violate the democratic system and the law of the state, they can never be regarded as exercising the party's leadership. On the contrary, they directly undermine the party's leadership. Of course, these activities must be strictly banned.

In short, our party's principle and policies on the theoretical relationship between developing democracy and strengthening democracy are clear and correct. Some specific systems and measures have to be formulated after we have made further practical investigations and summed up our experience. The key is to strive to improve the party's leadership while adhering to it. All our party members must pay attention to the development of democracy, establish an intimate and trusting relationship with the masses of people and their representative organs, and promote the development of the socialist democratic system and legal system by their exemplary actions in respecting democracy and observing the law.

A RELIABLE GUARANTEE FOR SOCIALIST CONSTRUCTION

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 19-23

[Article by Shao Huaze [6730 5478 3419]]

[Text] Vigorously strengthening the modernization of national defense and further consolidating it is a reliable guarantee for the people of the whole country devotedly to carry out socialist construction.

In his report to the 12th CPC National Congress, Comrade Hu Yaobang put forward to the whole party and the people of the whole country the task of strengthening national defense. We must see the importance of this task and vigorously carry it out by linking it with our country's situation in the international arena and with the overall situation in our country's socialist construction.

Modernization of National Defense Is an Important Part of Socialist Modernization and a Strong Guarantee for Socialist Construction

The 3d Plenary Session of the 11th CPC Central Committee formulated the strategic policy of shifting the focus of party and state work to modern socialist economic construction. This policy was set forth on the basis of the principal contradictions which needed to be resolved at home and also on the basis of our experiences and lessons of the past. It reflected the eager wish and basic interests of the people of the whole country.

In order to concentrate our energies on carrying out socialist modernization, we need a sustained, consolidated political situation of stability and unity at home as well as a peaceful international environment. In his report entitled "The Current Situation and Tasks" delivered on 16 January 1980, Comrade Deng Xiaoping said: "As far as China is concerned, our foreign policy is to seek a peaceful environment in which to accomplish the four modernizations." "This is a major issue compatible not only with the interests of the Chinese people but with those of the people of the whole world."

However, unlike domestic affairs, international affairs are not decided exclusively by us. In the world at present, the superpowers are engaged in fierce competition for their own benefits and for global domination. They are the main cause of unrest and turmoil in the world. The flames of war are raging in many places. The 1980's will be a decade marked by great turbulence and riddled with crises. Of course, the consciousness of the people of the world is widening and the forces against hegemonism are developing. Experience shows that the people of the world can upset the superpowers' strategic plans through persistent, unremitting struggle. World peace can be maintained provided the people of the whole world are truly united and struggle resolutely against hegemonism and expansionism of all kinds. However, possibility is not reality. Take China's actual environment for example. The Soviet Union has amassed heavy troops in its areas bordering on China and in areas in Mongolia bordering on China. It supports Vietnam in its invasion and occupation of Kampuchea, expansionism in Indochina and Southeast Asia and continuous provocation in areas bordering on China. It invaded and occupied Afghanistan, China's neighbor, by armed force.

We are carrying out socialist construction under international conditions in which the world is far from tranquil and the danger of war still exists, and in a situation in which China's security is seriously threatened. For this reason, we must never slacken our vigilance and must strengthen the modernization of our national defense.

Strengthening our national defense is closely related to seeking a peaceful international environment. In seeking a peaceful environment for socialist construction, we need a correct foreign policy on the one hand and a consolidated national defense on the other. Both are indispensable. Hegemonists and other reactionary forces are bent on increasing actual strength to attain their goal of aggression and expansion. In order to cope with their aggression, we should definitely develop our own actual strength. When our actual strength (including our economic resources, political power and defense capability) is augmented, they will be forced to refrain from making reckless moves against us. Should they be blinded by lust for gain and stubbornly invade us, we will have full confidence in defeating them in battle. For this reason, based on the interests of our state and nation and those of defending world peace, we regard the modernization of our national defense as an organic component of the four modernizations. Building a powerful national defense is an important part of socialist modernization and an important guarantee for socialist construction. Socialist China is a peace-loving country which has a strong defense capability. Should anyone dare to launch a war of aggression against China, a crushing defeat is the only answer for them.

Our Policy Is To Strengthen National Defense on the Basis of Vigorously Developing Economic Construction

Building up national defense is a matter of great importance. However, strengthening national defense involves questions of both policy and guiding ideology.

The building up of national defense has different parts, involves work in many aspects and requires the existence of various conditions. The most important prerequisite is the development of the national economy. Building up national defense by taking it as an isolated matter is one policy; strengthening national defense on the basis of economic development is another. Practice shows that only the latter policy is correct and effective. This correct policy was first put forth by Comrade Mao Zedong in his famous report entitled "On the Ten Major Relationships" delivered in 1956. He said: "We must strengthen our national defense, and to that end we must first of all strengthen our work in economic construction." "Only with faster growth in economic construction can there be greater progress in the building up of national defense."

According to the Marxist viewpoint, economic resources are the material basis of violence. Modern defense and modern warfare have become more dependent on the economy. As a result of the rapid progress in science and technology and the increasing modernization of industry and communications, defense equipment and installations need to be improved constantly and the weapons and other equipment of the armed forces also need to be renewed from time to time. This inevitably entails a tremendous increase in defense spending, both financially and materially. The needs and consumption of materials in modern warfare are beyond comparison with that in old-type warfare. Take the recent Malvinas war between Britain and Argentina for example. The war lasted for more than 70 days, inflicting heavy material damage and losses on both sides. Reportedly, Britain spent about $2 billion on this expedition. Of course, whatever the conditions in which a modern war is fought and no matter how modern the weapons may be, political and human factors play a final, decisive role in determining whether a war will end in triumph or defeat.

The "theory that weapons are decisive" in war was wrong in the past and still is wrong today. Yet, the grim reality is that weapons are playing an ever-increasing role in war. Failing to realize or neglecting this point will surely lead to mistakes.

Undeniably, under the party's leadership and with the vigorous efforts of the people of the whole country over the past 33 years, we have won enormous achievements in building our national defense, and our army has expanded from a land force into a comprehensive army also including air and naval forces and other technical units. Relying on our own efforts, we have devised and produced the atom and hydrogen bombs, long-range guided missiles and other sophisticated strategic weapons for self-defense. We see this as something to be proud of. This is an important factor deterring the imperialists from launching a large-scale invasion against us. However, generally speaking, our weapons and equipment are relatively backward; they are restricted chiefly by the levels of economic development of our country. Modernization of national defense can only be a gradual process.

For this reason, we must correctly handle the relationship between building up the economy and building up national defense. The general principle guiding this relationship is, as pointed out in the "Resolution on Certain

Questions in the History of Our Party Since the Founding of the PRC" adopted by the 6th Plenary Session of the 11th CPC Central Committee, that "the building up of national defense must be in keeping with the building up of the economy" and, as pointed out by Comrade Hu Yaobang in his report to the 12th CPC National Congress, that "our national defense must be strengthened on the basis of vigorous economic development."

The 12th CPC National Congress put forward the objective of our country's economic construction for the last two decades of this century. Once this objective is realized, our country will have much greater economic strength and defense capability. In this sense, while striving to realize this great strategic objective of economic construction, we are vigorously strengthening national defense. If our tasks, including the building up of national defense, are separated from the central link of economic construction and impede economic development, the building up of national defense will inevitably be impeded; this does not accord with the people's interests.

On the other hand, with the daily development of the economy and the gradual improvement in people's livelihood, national defense should be modernized continuously. National defense should be supplied with increasingly better material and technical conditions and with ever better weapons and equipment which it needs. In drawing up plans for the development of industry, transportation, science and education, attention should be paid to the needs of building up national defense and launching a war against aggression in the future. From the viewpoint of national defense, first we should do what we are capable of doing, and second, we should strive to do it well. The first means that the scale and speed of building up national defense should be appropriate, should not go beyond the limits of our national financial and material capacities and should not affect the speed of economic construction. The second means that the limited financial and material resources should be used properly by bringing subjective initiative into full play and by adopting the various effective measures of having better troops and simpler administration and strictly practicing economy, so as to attain the greatest possible results. As far as the army is concerned, it must continuously improve its weapons and equipment and make full use of the existing ones so as to win victory with the available weapons and equipment. The building up of our national defense will develop steadily provided we adopt this correct policy.

Strive To Build the PLA Into a Regular, Modern and Powerful Revolutionary Army

The key to modernizing national defense is to build a regular, modern and powerful revolutionary army.

Our PLA has developed in the fire of a protracted revolutionary war. It is a completely new type of people's army led by the party, and numerous facts have proved that it is an army with powerful combat effectiveness. After the smashing of the "gang of four" and especially since the 3d Plenary Session of the 11th CPC Central Committee, just as Comrade Hu Yaobang pointed out in his report to the 12th party congress: "The PLA has achieved marked successes in improving its military training and its ideological and political work, in bettering its relations with the civil authorities and the people, in defending our frontiers and safeguarding national security and in helping socialist construction. It has further enhanced its military capability and political consciousness in line with the new historical conditions." We firmly believe that by working hard on this basis, the tempo of army building can certainly be accelerated.

New conditions, which did not exist before, have appeared in contemporary warfare. The most salient feature is three-dimensional warfare. It means that warfare will be simultaneously carried out in the air, on land and at sea, and it will be difficult to differentiate between the frontline and the rear areas. To adapt to the demands of this kind of warfare, we must further build the PLA into a powerful composite army able to operate in concert with various branches of the services under modern conditions. The organizational system, weaponry, strategy and tactics as well as cadre training of the army must be oriented in this direction.

The state of weaponry has an important bearing on the formation, establishment, strategy and tactics of the army. The appearance of modern weapons and the extensive application of the latest achievements of science and technology in war have presented numerous new problems to the pattern, strategy and tactics of warfare as well as to military organization. The PLA is now engaged in the world of readjusting, reorganizing and restructuring. It has implemented the policy of improving the quality of the troops, simplified the leadership structure, strengthened the composition of all service arms and intensified composite training. This is a policy decision of great significance. The implementation of the policy of readjustment will further improve the combat effectiveness of our army.

In the building of modern armed forces, the organization and command of warfare under modern conditions require large numbers of qualified personnel in the military, political and logistic fields. In the war years of the past, our party and Comrade Mao Zedong explicitly called for "learning warfare through warfare." This correct policy destroyed the aura of mystery surrounding military work for the whole party, successfully trained large numbers of military personnel who were brave and skillful in battle as well as loyal to the people, and resulted in the victory of the revolutionary war. Today's conditions are different. Qualified personnel who can organize and direct contemporary warfare must be fostered by relying on strict regular training in times of peace. In 1975 Comrade Deng Xiaoping proposed that the army raise the strategic position of education and training. In recent years, close attention has been paid to army training and the contents and methods of training have been reformed to meet the demands of future operations. All categories of military colleges at all levels have become better and better run, and outstanding results have been achieved. The modern military attainments of the cadres have rapidly improved, and the basic level cadres who have mastered the tactical skill and specialized ability of fighting under modern conditions are maturing. In the past, the battle fought continuously for more than

20 years meant that units possessed a large number of veteran cadres who had been tempered and tested for a long time in warfare as the backbone force in our army building.

This constituted the distinguishing feature and the superiority of our army. In recent years, a large number of young and middle-aged cadres with both ability and political integrity who are full of vigor and in good physical condition have also been constantly promoted to leading posts at all levels. This has injected new blood into the cadre contingent and made it more vigorous. Given the tasks and demands of the army, making the cadres more revolutionary, younger in age, better educated and professionally more competent is of paramount importance. The proper solving of the problems of training cadres and making them younger in age will be of important significance to developing a new situation in army building.

Regardless of how weaponry will change or how different the pattern and scale of warfare will be, the morale, combat will and spirit of sacrifice of the army members play a very important role in the outcome of a battle. We have absolute superiority in this respect. The commanders and fighters of our army are loyal to the motherland and the people, and their revolutionary spirit of fearing neither hardship nor death and their strict and conscious discipline are world famous. In the protracted revolutionary war, the PLA established a complete set of ideological and political work policies, principles and methods which guaranteed its consolidation, raised morale and strengthened organizational discipline. During the 10 years of internal disorder, the fine tradition of army ideological and political work was severely damaged. After the smashing of the "gang of four" and especially since the 3d Plenary Session of the 11th CPC Central Committee, this tradition has been restored and carried forward.

In the building of socialist spiritual civilization, based on its own characteristics, the army has developed "four haves, three stresses and two fear nots" (have ideals, ethics, knowledge and physical strength, stress military appearance, manners and discipline, fearing neither hardship nor death) activities, and outstanding results have been obtained within a short time. A large number of advanced collectives and advanced individuals have appeared, and a profound change has taken place in the spiritual aspect of the army. Along with the more extensive and penetrating development of these activities and the further strengthening and improvement in ideological and political work, the revolutionization of the army will be raised to a new level. Our army has come from the people. It serves the people and has flesh-and-blood ties with the masses. The people also always use this profile of the image of the army to judge our party and state. The quality of the spiritual face of the army has a very important effect on the prestige of the party and the dignity of the motherland and also plays a very important role in improving party style and popular custom and building the whole of socialist spiritual civilization. The report to the 12th party congress proposed that "our army will serve not only as a Great Wall of steel guarding our socialist motherland but also as an important force in building our socialist material and spiritual civilization." This shows the high degree of confidence placed by the CPC Central Committee on the army, and is a glorious task the army should and also must certainly undertake.

According to the teachings of Marxist-Leninist countries, the army is an important component of the state mechanism. The "Draft of the Revised Constitution of the People's Republic of China" which will soon be submitted to the National People's Congress for consideration, has given a new definition on the position of the army in the state system and stipulated the setting up of a Central Military Commission of the state. This has been made as a result of summing up historical experiences and proceeding from our country's actual conditions and needs. This stipulation does not in any way abolish or weaken the leadership of the party over the army. The PLA is a people's army created and led by the CPC. History has proved that the leadership of the party over the army is essential for the interests of the state and the people and definitely cannot be shaken.

The preamble of the "draft of the revised constitution" has already clearly affirmed the leadership role of the party over the state and naturally also includes leadership over the part of the army belonging to the state. The various effective systems of the party leading the army, which have been practiced for a long time, must continue to be upheld. This is the basic guarantee for always preserving the quality of a people's army as well as the basic guarantee for speeding up the building of a modern regular army, and completely accords with the greatest interests of the people throughout the country.

Construction of Strong National Defense Must Rely on the Joint Efforts of People Throughout the Country Under Party Leadership

National defense modernization is one of the objectives of struggle for people throughout the country put forward by the party. National defense construction covers many fields. It is not the business of one or two departments nor is it just the business of the army. Strengthening national defense includes raising the combat effectiveness of the people's army, and this can only be achieved by relying on the joint efforts of the army and people under the unified leadership of the CPC Central Committee.

Under peaceful conditions, improving the people's understanding of national defense is an important matter. We must not waver in the least and must always adhere to this point of taking economic construction as the basis. However, we must guard against the misunderstanding among some of the comrades who seem to think that national defense construction is no longer so important. Our construction must as far as possible strive for a peaceful international environment. However, we cannot, because of a peaceful life, adopt the attitude of lowering our guard and slackening our vigilance. In particular, members of the PLA absolutely cannot slacken their combat will in the slightest, and they must be mentally prepared at all times to cope with all possible emergencies. Not having a concept of national defense will greatly affect national defense construction in normal times and anti-aggression wars in the future. Lenin, at the Ninth All-Russia Congress of Soviets, said: "Having started on our work of peaceful development we shall exert every effort to continue it without interruption. At the same time, comrades, be vigilant, safeguard the defense potential of our country and strengthen our Red Army to the utmost." Under the premise of engaging in peaceful development, Lenin's decision to educate the people not to slacken their attitude of taking precautions was farsighted and showed a high degree of responsibility toward the interests of the state and the people. This is still of guiding significance to us today.

The strengthening of unity between the PLA, the civil authorities, the army and the people and the correct handling of relations between the army and its localities have an extremely important bearing on the construction and consolidation of national defense. The PLA is an army composed of the sons of the people and the relations between the army and people are inseparable as fish and water. If the army becomes separated from the people, it will not be able to move a single step. In the past, our people needed a powerful army for their own emancipation. After victory, they also needed a powerful army in order to keep their minds at rest for labor. For a long time, under the leadership of the party and Comrade Mao Zedong, the PLA not only developed close unity with the people but also created a series of correct principles and methods for handling the relations between the army and the locality. In recent years, for the sake of eliminating the mistakes of the "Great Cultural Revolution" and especially the aftermath caused by the sabotage of the Lin Biao-Jiang Qing counterrevolutionary cliques, the army and the locality have carried out a great deal of work under the leadership of the party, and unity between the army and people has greatly strengthened.

In the battlefield on the self-defense counterattack operation against Vietnam, in the struggle to combat calamities and deal with emergencies, in urban as well as rural areas and in coastal as well as frontier defenses, stirring deeds of the army cherishing the people and the people supporting the army can be seen everywhere. Such patriotic advanced models in supporting the army as Zhao Chenni and Ma Yaozhi, who bravely accepted difficulties for the sake of army building and defending the motherland, have greatly inspired the cadres and fighters of the units. Such combat heroes as Yang Chaofen and Yan Long, who gave their young lives in defense of the frontier of the motherland, have filled the masses with a sense of incomparable pride. The army supporting the government and cherishing the people, the locality supporting the army dependents and the strong unity between the army and people have been a source of strength in the past and will still be a source of strength in the future. We must carefully treasure this kind of unity, use various practical actions to strengthen it and build a strong wall of steel which will strike fear into the hearts of the enemies and give the people peace of mind.

The war against aggression of the future will be a people's war under modern conditions. Comrade Mao Zedong's great thinking on people's war will still be an important magic weapon of ours for vanquishing the enemy. In the war of the future, the militia will still have a vital indispensable position as well as role. In carrying out better troops and simpler administration, the army should appropriately further strengthen militia work and properly carry out the reserve service system and the mobilization system. If militia building is properly grasped, the army will have a strong backbone force and will be able to drown the invading enemy in the ocean of a people's war.

As early as in 1950, Comrade Mao Zedong said to the representatives of combat heroes and labor models of the whole country: "China must build a powerful national defense army and a powerful economic force. These are the two major things. The success of these two things depends on the comrades, together with all the commanders and fighters of the PLA as well as the workers, peasants and other people throughout the country uniting as one and working in cooperation." Today, if the army and people of the whole country mobilize themselves and bring their initiative and creativity into play under the leadership of the party, the grand task of developing the national economy, the task of strengthening national defense and various other tasks can all be successfully fulfilled.

CORRECTLY UNDERSTAND OUR COUNTRY'S INDEPENDENT FOREIGN POLICY

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 24-28

[Article by Qi Wen [7871 2429]]

[Text] In his report to the 12th CPC National Congress, Comrade Hu Yaobang systematically elaborated our country's independent foreign policy. The CPC Constitution adopted by the congress also expounded the fundamental stand of the CPC in international affairs. Consistently adhering to the five principles of peaceful coexistence, China will continue to develop its relations with foreign countries, unswervingly strengthen its unity with Third World countries, ally itself with all the forces that can be allied with and struggle to oppose imperialism, hegemony and colonialism, safeguard world peace and promote the progress and striving of mankind.

I

For every country in the world today, the question of what foreign policy to carry out is of prime importance. Nearly 150 years ago, Marx and Engels pointed out, in "The Manifesto of the Communist Party": "Production and consumption in all countries have assumed cosmopolitan characteristics...in place of the old local and national seclusion and self-sufficiency, we have comings and goings between all peoples and places and mutual interdependence on all sides. As in material, so also is the case in intellectual production." This quotation tells us how the world became a complete entity as soon as capitalism took shape and every country became, willingly or unwillingly, an inseparable part of this world. It was in this course of capitalism's expansion throughout the world that backward and feudal China was forced to open its door and be involved in the process of the whole world's development. This is a process which cannot be resisted and which can also be extraordinarily painful. From the mid-19th century onward, China deteriorated from being a great country with an ancient civilization into a semicolony.

For fully 109 years, from the Opium War to the founding of the PRC, China, through being forced to engage in intercourse with foreign countries and playing the role of being bullied, oppressed and trampled upon, had no independent foreign policy of its own. This long and miserable experience did not end until the Chinese people, under the leadership of the CPC, defeated all agents of imperialism and founded the PRC in 1949. One of the most valuable achievements of the Chinese revolution was the recovery of China's national independence. The Chinese people, from being bullied and oppressed, now turned into a nation able to control its own destiny, take the initiative in pushing ahead with the world's development and make its own contributions to mankind. This really was an earth-shaking change.

It is not easy for an oppressed nation to recover its independence. It is not easy either to implement a completely independent foreign policy after recovering independence. Since imperialism and hegemony are still at large in the world and constantly exert pressure on those countries which have newly recovered independence, the implementation of an independent foreign policy is in itself a course of struggle.

II

In his opening address given to the 12th CPC National Congress, Comrade Deng Xiaoping pointed out: "While we Chinese people value our friendship and cooperation with other countries and peoples, we value even more our hard-won independence and sovereign rights. No foreign country can expect China to be its vassal, nor can it expect China to swallow any bitter fruit harmful to China's interests." This is a concise summary of our country's foreign policy, which embodies the spirit of independence and sovereign rights.

Independence and sovereign rights are completely consistent with internationalism. As a socialist country led by the CPC, the PRC believes that all nations in the world will, sooner or later, take the socialist and communist path; that only through the ultimate liberation of mankind can the proletariat of every country attain its own liberation; and that only through the general development of the whole world can every nation attain its own goal. In the final analysis, the interests of all nations entirely coincide. We cherish our nation's interests, and respect other nations' interests as well. For this reason Comrade Hu Yaobang pointed out in his report: "Integration of patriotism with internationalism has always been our basic point of departure in handling our external relations."

As everyone knows, different classes have different points of view on "national interest." The difference between proletarian internationalism and bourgeois nationalism lies in the latter seeking only a nation's selfish interests while the former always considers a nation's own interests and mankind's interests as a whole. As their points of departure are different, their practices are naturally different.

In implementing bourgeois nationalist foreign policy there are two situations and two guiding principles. 1) In the situation of weak national power, if the nation does not depend on a certain powerful country or bloc, it thinks itself clever and plays the "card game" of international politics. The treacherous diplomacy of the rulers of old China was a shame, and the trick of "setting the barbarians against the barbarians" which they played was nothing more than a standing joke. 2) In the situation where a state is strong, the bourgeois nationalists of the state can become chauvinist and expansionist, or even imperialist and hegemonist. As a result, they infringe upon other nations' interests, and in turn make their own nation the object of resentment and resistance in the eyes of other nations. Finally, they will be isolated in the world and thus bring disaster to their own nation. Many countries took this road in the past and some countries are still following this old road today.

Old China was for a long time a weak, enormous country. Accordingly, when our people won the victory of revolution, we summed up our own and other people's experience in these two situations, upheld our own stand which embodies the integration of patriotism and internationalism and persistently oppose bourgeois nationalism.

On the eve of the birth of the PRC, Comrade Mao Zedong declared, with dauntless proletarian revolutionary spirit: "China must be independent and China must be liberated. The Chinese people want to handle China's affairs on their own and can tolerate no intervention by any imperialist country. ...No matter how the latter may continue to oppose the Chinese people, we Chinese people will always be able to find a way to win the final victory." Soon after the founding of the republic, Comrade Mao Zedong again taught us to "resolutely, thoroughly, wholly and completely wipe out great nation chauvinism." Later, in view of the harm brought to the people of the world by the superpowers' hegemonism, Comrade Mao Zedong declared again that we would never be a superpower and seek hegemony.

It is in the above two aspects that China's foreign policy, which is formulated under the guidance of Marxism-Leninism-Mao Zedong Thought, has drawn a demarcation line between itself and bourgeois nationalism. At the First Session of the First National People's Congress, Comrade Mao Zedong also definitely pointed out: "Our general task is to unite the whole people and win the support of all our friends abroad in the struggle to build a great socialist country, defend world peace and advance the cause of human progress."

Here, he meant that we must try to obtain aid from others as well as provide aid for others and defend our national interests as well as fulfill our international obligations. In fact, in the last 30 years or more, we have successfully withstood all the pressure imposed on us by imperialism and hegemonism. In the Korean war and the Vietnam war, we also courageously made national sacrifices in the struggle to save world peace. As to other Third World countries which are engaged in the struggle for political and economic independence, we never hesitate to provide aid. Many examples are available to support our claim that we are by no means parochial nationalists but are, rather, unwavering internationalists.

Marxism-Leninism not only encompasses the proletariat's world outlook but also their struggle strategies and policies. Because we have always kept in mind the overall world situation when handling foreign relations, we have been able to, in the light of the basic situation of each historical stage, stipulate our struggling tasks for the specific stage, clearly analyze the relationship between our enemies, our friends and ourselves, distinguish friends from enemies, major enemies from minor enemies, and direct allies from indirect allies, and thus correctly estimate our force in opposition to that of our enemies, and work out correct strategies to provide a concrete base for implementing foreign policy. Therefore, our foreign policy has shown a valuable steadfastness and continuity.

International affairs are extremely complicated. Some unexpected thing may emerge at any moment to bring about unexpected turmoil. Because of our scientific world outlook and a long-term strategy, we have been able to integrate our firm principles with feasible measures. We have been able to be free from the influence and control of chance occurrences, and we have never been dictated to or deceived by our momentary emotional reaction. As Lenin remarked, accommodating oneself to temporary situations means practicing opportunism. We have never practiced opportunism but have consistently advanced toward our goal.

In the light of the above-mentioned characteristics, we can say that we are implementing a completely and genuinely independent foreign policy. Our foreign policy enjoys a high prestige and has won for China an honorable image in the international arena.

III

The five principles of "mutual respect for sovereignty and territorial integrity, mutual nonaggression, noninterference in each other's internal affairs, equality and mutual benefit, and peaceful coexistence" have consistently guided China in its efforts to develop relations with all other countries in the world.

In April 1954, the newly independent China and India initiated these five principles in the "agreement concerning trade and transport between China's Xizang and India." In June of the same year, when Premier Zhou Enlai was visiting India, he and Indian Prime Minister Jawaharlal Nehru incorporated these principles in the Sino-Indian joint communique. These five principles show that we treasure our hard-won independence, respect other countries' independence and resolutely oppose aggression against the independence and sovereignty of all countries. The five principles also demonstrate correctly the position of a great majority of countries, particularly of the newly independent countries in the world of today. Precisely because of this, the ideas of the five principles have met with a wide response over the past 30 years. In many bilateral treaties and agreements, and in many international documents and manifestoes, similar wording to the five principles has been used to express the ideas of mutual respect for sovereignty and territorial integrity, mutual nonaggression, and noninterference in each other's internal affairs. A good example can be seen in the 10 principles set forth in the final manifesto of the Afro-Asian conference held in Bandung, Indonesia in 1955.

It can be said that today the five principles have found deep resonance in the hearts of the people of the world and have become a universal norm in guiding relations between states. The norm of violence is often repudiated by public opinion. The five principles have already replaced the imperialist logic of "might is right" which ran rampant in international life before World War II. In the international life of today, if we say that due to the existence of hegemonism the five principles are still not able to be implemented thoroughly, we can say nevertheless that these principles have at least become a powerful force of morality and justice and have become undeniable legal principles in international law. This is an important progression in the international relations of the present age.

With regard to international relations in general, our five principles are suitable for all countries. Some people say Lenin advanced the principle of peaceful coexistence to guide relations between socialist countries and nonsocialist countries. For this reason, this principle is not applicable to the relations between socialist countries. In fact, at the time when Lenin proposed peaceful coexistence, there was only one socialist country in the world. However, historical experience gained since the emergence of other socialist countries in the world, shows that relations between socialist countries should also be built on the basis of the five principles. Of course, socialist countries enjoy similar social systems. In theory, they all take Marxism-Leninism as their common faith and, in practice, they take proletarian internationalism as their universal standard, so there should be more extensive cooperation and closer relationship between them. However, the prerequisite to such a relationship must be strict adherence to the five principles. Meanwhile, socialist countries must play an exemplary role in implementing the five principles. Just as Lenin said: "If the proletariat allows its nation to practice even the slightest violence against other nations, then it is not a socialist proletariat."

With respect to bilateral relations, our five principles do not repel any country. China is willing to establish and develop normal diplomatic relations with any country if it can follow the five principles not only in word but also in deed. Naturally, it is hard to avoid contradictions between countries. Precisely due to such contradictions, it is necessary to find reasonable solutions to them through application of the five principles so that relations between countries can continue to develop normally. As for those hegemonist countries which disregard China's sovereignty and attempt to force China to be subject to their interests, we cannot but wage a resolute struggle against them until they recognize that China's sovereignty brooks no violence and its security brooks no threat. Then, we will develop our normal relations with them on the basis of the five principles. But this must not, to the slightest degree, hamper our free initiative of opposing their policy of seeking hegemony over other countries. The course of carrying out the five principles is also the course of measuring strength against the hegemonists. Upholding peaceful coexistence and fighting against hegemony are two aspects of the same thing.

IV

What force in the world today is threatening the independence of various countries and world peace? First and foremost, it is the hegemonism pursued by the superpowers.

As is well known, through two world wars, particularly after the victory of the Chinese revolution, the old colonial system of imperialism fell apart with the independance of many colonial and semicolonial countries. But, its remnants are still to be found. In addition, the superpowers seeking hegemony have taken the place of the old imperialists, constituting a new menace to the peoples of all countries of the world. Each of them is now operating its war machine with enormous military expenditure on a scale unprecedented in peacetime in human history.

They are irreconcilably rivaling with each other in almost all regions of the world. They are interfering in other countries' internal affairs by every means possible, even resorting to military force. They are occupying the territory of other countries through their agents, or even directly dispatching their troops. Through their eyes, they see only their strategic interest and do not see the interests of other nations at all. After World War II, regional wars have not ceased on the earth. Until now there are still many "hot spots," such as the Soviet aggressive war in Afghanistan, Vietnam's aggressive war in Kampuchea, the war of the Israeli invaders against the Palestinian and Arab peoples and the war against African people in South Africa. All these wars were hatched up, supported and instigated by the superpowers, or they are taking part in them themselves. The rivalry between them has become a main source of turbulence and disturbance in the world today.

The Chinese people share a common wish with the people of all other countries in the world, a wish to build their own countries in peaceful world surroundings. In order to seek peace and progress and to build their countries, the people of the world have to fight against hegemonism in the face of the war menace of the superpowers seeking hegemony. To this end, our strategic principle in international affairs is to cement unity with the proletariat, the oppressed nations and people of the world and to unite all peace-loving and justice-upholding forces in the world in a joint effort to oppose imperialism, hegemonism and colonialism, safeguard world peace and promote human progress.

In the struggle to oppose imperialism, hegemonism and colonialism, the Third World is playing a very important role. This is because the countries of the Third World, including China, suffered the most cruel exploitation and oppression at the hands of imperialists and colonialists in history and today they are also the main victims of hegemonism. Therefore, they are the most staunch fighters in the struggle against imperialism, hegemonism and colonialism. The rise of the Third World is a major sign of the great changes in the world situation today. The number of people in the countries of the Third World constitutes three-quarters of the world's population. Divorced from the vast Third World, international justice and human progress would be meaningless. More than 100 countries in the Third World spread to every corner of the world, covering over two-thirds of the earth's surface. They are the main force in the struggle against hegemonism because they can curb and tie up the major forces of the hegemonist superpowers and can foil their war schemes.

In accordance with Lenin's theory that imperialism divides nations in the world into the oppressors and the oppressed, and that the international proletariat must fight together with the oppressed nations, and in accordance with his call for unity between the international proletariat and the oppressed nations, we must attach importance to the unity of people of the various countries in the Third World.

Some people look down on the countries in the Third World because most of them today are comparatively backward in economy and weak in military strength. Such people also hold that the Third World can hardly play a big role in international affairs. But, if we look at this problem with an eye on the course of its development, we say such views are groundless. As a matter of fact, the Third World has become a gigantic progressive force in the world after the former colonies and semicolonies achieved independence one after another. It has changed and is still profoundly changing the look of the world. The situation in which only a few powers control the destiny of the world is gone forever. For years the United Nations was a place where the big powers were tampering with the voting machine. Now, it has turned into a place where all kinds of hegemonism are repudiated or are put on trial. In this world organization and on other international rostrums, many just resolutions are passed with the support or sponsorship of the Third World.

For example, the struggle launched by Latin American countries to oppose the superpowers' domination over oceans, and the struggle waged by oil export countries and other raw materials-producing countries for a sovereign right over their own natural resources have all achieved great success. Are all these not facts which many people could not imagine in the past and also cannot negate now? In opposing power politics and bloc politics, the nonaligned movement, which comprises many Third World countries, has dealt a heavy blow at the hegemonism of the superpowers. The movement for establishing a new international economic order is now, with the participation of many countries of the Third World, pounding at the present international economic order which is unequal and unfair. This is a movement of great strategic significance. Although there is no demand for forming a united front among countries of the Third World, nevertheless, they have identical views and take concerted action in the struggle. This has converged into a mighty torrent, giving an impetus to the development of international relations toward equality and democracy. The development of human history is complex and zigzags, but newly emerging things always conquer huge monsters which consider themselves unbettered in the world. Now we can see that the relatively poor Third World is precisely just such a promising new force.

Apart from wishing constantly strengthening unity with Third World and other countries, China also needs to unite with all forces which can be united with regardless of whether they are governmental or popular, as long as their struggle is helpful to the cause of opposing hegemony and safeguarding world peace.

As everyone knows, the PRC established diplomatic relations with many developed capitalist countries in Western and northern Europe just after its founding. We have maintained and developed good economic and cultural relations with these countries for many years. In the last 10 years, we established friendly relations with Japan and more Western countries. Generally speaking, these relations are beneficial to both sides and have already yielded positive results. We really value these relations and will continue to try our best to strengthen them on the basis of the five principles. To be sure, there exist contradictions between these developed capitalist countries and the Third World countries. However, the former are also facing war menace and suffering from the intervention, control and oppression exercised by the superpowers. Therefore, it is not only necessary but also possible for us to unite with them under certain conditions.

People all over the world are now carrying out peace campaigns of various types in the face of an increasingly serious menace of nuclear war. Although the composition of the members engaged in these campaigns, as well as their motives, are not completely identical, we always support them as long as they are really advantageous to the struggle to oppose hegemony and defend world peace.

We oppose the hegemonist moves and war policy of the superpowers. Nevertheless, we always cherish deep feelings toward the broad masses of the people of these countries, and try our best to intensify our friendly ties with them.

For a long time, we have emphasized the existence of a serious war threat. This is by no means alarmist talk but an inevitable trend which results from the scramble for hegemony between the superpowers. Many facts in the last 30-odd years since the end of World War II have shown that the superpowers have never stopped trying to launch a world war, only to be checked by the people's force time and time again. As long as the Third World countries and all peace-loving forces in the world can really unite together and are ready at all times to struggle resolutely against the plans of hegemonists, it is possible to continue to maintain a peaceful situation in the world.

As a socialist Third World country, China is dutybound to engage in this struggle. We will strive to preserve a peaceful international environment for the magnificent cause of socialist modernization of China, and make our contributions to the independence and security of the peoples of all countries and the progress of mankind.

EXCERPTS FROM SPEECHES MADE AT FORUM ON STUDYING THE 12TH CPC CONGRESS DOCUMENTS

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 29-36

[Text] Wang Meng [3769 5536]: "Raise the Ideological Level of Literary and Artistic Works and of Writers and Artists"

Both literature and art are extremely important parts of a lively civilization. By looking at literature and art, we are able to see the condition of the society itself, the extent of education and the level of culture. At the same time, literature and art influence both society and man's spiritual world.

Construction of a high degree of socialist civilization demands a great development of the causes of literature and art. Four years of practical experience amply illustrate that the correct policies and directives issued by the third plenary session of the party Central Committee guiding literary and artistic work, have established a fundamental insurance for the development of a new stage in literature and art in China.

Here I would like to bring up several important points:

1. We must raise the ideological level of artistic and literary works and offer the masses healthy and ever improving works of art and literature. The lofty ideals and great practical experience of communism have imbued into our art and literature a hopeful and ever onward struggling spiritual force, and it is this which is one of the fundamental characteristics of socialist literature. Despite the number of difficulties and obstacles to overcome, we will remain confident in the destiny of our people and the future of our homeland. Of course, we cannot simply shut our eyes at will to all the problems, suffering and pain which exist in our lives, and our art and literature should try to avoid contradictions and should not use falsities, exaggerations, etc. in an effort to deceive everyone. Similarly, we cannot turn a blind eye to the progress and victories in our lives nor the heroism and creative spirit of the people. We must make sure that we reflect freshness in life and communist values in practical day-to-day living. Of greater importance is to avoid writing about problems merely for the sake of creating problems, or writing about pain for the sake of pain. We must set out to overcome and destroy such pain and problems.

Thus, a piece of work which concentrates on the judgment of something awful should follow the judgment with awe-inspiring righteousness and be written in a scientific manner; it should not be a way of expressing one's own personal conceit or denying general pride and propagating feelings of despair. In describing villains, our aim is to enliven the readers' vigilance and alertness and rejection of such concepts and thus gradually allow everyone to become a little better and a little more likable and not the opposite. It is not difficult to rely on the tears of discontent and complaint to influence some naive readers. Such an attitude is both blind, cheap and irresponsible. Our literature and art should call on the spiritual strength of the people, on the ideals of communism and on the historical and social sense of responsibility of the people, thereby admonishing and denouncing the more mediocre and sordid who display cynicism, apathy and hopelessness. Every piece of writing and every work of art should display light and warmth, even only to an extent similar to that of a matchstick, so that when this light and warmth are added to that of other pieces of literature and art, the fused body will be much easier to see.

2. We must raise the taste and interest of both the writers, artists and the masses who read or appreciate literature and art. Taste is also an expression of spiritual civilization. A piece of literature or art must have taste, but there are different levels of taste. Since the onslaught of such distasteful pieces as "looking toward money" and "merchandization," there has been a fairly serious appearance in print and circulation of books of very low taste. Some publishing houses even publish works displaying feelings of despair, which are held in contempt by academics in the Western world. Some pieces of literature, under the guise of criticizing, actually make use of and peddle poor and low taste. Such things run counter to our tasks of building a socialist spiritual civilization. Artists and writers must not forget that our mission is to climb to the pinnacle of socialist spiritual civilization and, under the direction of communist ideology, we want to critically carry on and pass down the most outstanding riches and artistic treasures and show our disdain for cursory and quickly put together low-grade work, struggling to combat poor taste and to produce beautiful works of art and pieces of literature of the greatest historical level and of utmost richness and talent.

3. In constructing a socialist spiritual civilization, we must train and bring up many new members of the socialist society, and we must start with ourselves. Because of the very nature of literary and artistic work, it is sometimes very easy to become an overnight success and sometimes it is very easy for us to become self-conceited and self-satisfied as a result, thereby cutting ourselves off from the masses and feeling that we are not bound by the spheres of socialist morals and even adopt a supercilious attitude. This is extremely dangerous. In the past, people such as this and their behavior resulted in writers and artists in general dropping in the esteem of the masses, and sometimes even resulting in great disgust from frontline comrades. We cannot be too cautious about the appearance of such phenomena and must be always on our guard against it.

Wu Zuqiang [0702 4371 1730]: "Grasp the Building of Socialist Spiritual Civilization With the Same Vigor and Determination as in Grasping the Building of Material Civilization"

In the great announcement by the party Central Committee referred to as "all-round development of a new phase in socialist modernized construction," it was made very clear that our great task of constructing a high level of socialist spiritual civilization should take communist ideology as its central theme and the tactical significance of this in achieving socialist modernized construction. China's artists and writers, and those in the party, in particular carry a great responsibility toward the construction of a socialist spiritual civilization. My metier is music and I feel that all those involved in music and composition should study hard the writings of the party and the government and consider in detail how best we can carry out our duties within the spheres of our work, thereby fulfilling our work responsibilities.

On the musical front, we are faced with some extremely hard tasks. We must continue our work to eradicate the negative results of the 10 years of social chaos and disorder and take care to prevent and overcome any ideological disarray in literature and musical bastardization which might arise from China's open door policy. We must correctly implement the literary policies of the party and overcome sways to the "left" and right which have appeared during many years of party policy implementation. Of even greater help is to initiate and activate among musicians enthusiasm for socialist construction and for the masses and strive to satisfy the multitude of musical demands of the masses, thereby continuously raising the level of musical enjoyment of the entire population. The completion of these few tasks all require our deepest study of and work on the contents of the 12th national congress report so that we may raise our consciousness and strive for the preservation of ideological and political harmony with the party.

The construction of material civilization requires planning, capital and the expenditure of energy. The construction of socialist spiritual civilization also requires us to carry out effective but arduous work; otherwise, the appeal will be in word only and not in deed. Here I have three points I would like to make:

1. We must strive to correct certain mistaken attitudes in the party, attitudes which have existed for a long period of time and over a wide spectrum and which lead to little attention being given to education in the sciences and arts and discrimination against intellectuals. Here the party Central Committee has done great work and has achieved significant results. But, to eliminate the influence of mistaken "leftist" ideology in this area, we must all unite in understanding and carrying out our work. Some people still feel that it is possible to create a spiritual civilization without culture and even go so far as to publicly propagate and spread such mistaken thinking. In the spirit of the 12th national congress, we must strengthen cultural development, implement the policies on intellectuals and recognize how this is closely related to the success or failure

of constructing a socialist spiritual civilization and thereby ensure that every policy and principle related to this cause is fully and effectively implemented.

2. The arts, including music, are an extremely important and significant part of spiritual civilization, which has its own idiosyncrasies. Hence, we should implement the policy of "letting one hundred flowers bloom, let one hundred schools of thought contend." In relation to this question, we already have ample experiences, both positive and negative and we should not again make the mistake of "leftist" and rightist swinging. The kind of arts we are advocating are socialist arts with communist ideology as the nucleus. We must trust in our art in order to be able to resist, with strength, the corrosion of the poisonous facets of bourgeois arts. We should, of course, remain alert to the erroneous belief of "freedom" of the bourgeois classes. But we should not prevent the active implementation of the "hundred flowers" policy for the sake of such relatively small risks.

3. We should increase by a relatively large amount of the proportion of funds allocated by the state for scientific and cultural education so that the construction of a socialist spiritual civilization may obtain the material support it requires. The serious problems of wastage within economic construction illustrate that such moves are by no means out of the question. We must, without a doubt, quickly increase the attention paid to "intellectual investments."

The party Central Committee has now officially announced two construction programs for civilization, and now we must tackle the building of spiritual civilization with the same vigor and determination as in tackling the building of material civilization. A high level of socialist spiritual civilization will automatically motivate further development in material civilization. If we can come to understand this dialectical methodology and strive to bring together the construction work for both these kinds of civilization, then we will be able to establish a new all-round phase for socialist modernized construction. Come, let us musicians join together with the masses throughout China, inspired by the spirit of the 12th national congress, and courageously march forward!

Liu Shaotang [0491 4801 2768]: "Build Socialist Literature With Communist Thinking as Its Core"

In his report to the 12th CPC National Congress, Comrade Hu Yaobang pointed out that "our educational work in the areas of science and culture is just getting onto the right track and is now developing considerably and now presents an admirable scene." This estimation is entirely in keeping with the present scene of Chinese literature and art.

In the 3d Plenary Session of the 11th CPC Central Committee, many leftist errors in the area of the art and literature dating back several years were put right. The party Central Committee considers literature and art as extremely important and thus carried out many close discussions with writers and artists from the art world, proposing many excellent suggestions related to art and literature and thereby motivating the creative enthusiasm of young and old writers alike. At the time when the artistic and literary world produced such bourgeois mistakes as "freedom" of expression which totally went against the four basic principles of communism, the party Central Committee immediately called an ideological work symposium and after exhaustive guidance, finally came up with an accurate criticism by searching the facts for the truth of the matter. It was only because of the party's strict adherence to the struggle on two fronts that socialist art and literature were able to continue on the right track and show excellent initial progress.

In reviewing the last few years of development in socialist arts, we can come to realize with even greater clarity the necessity for writers and artists to preserve ideological and political unity with the party. Socialist arts are an important part of socialist spiritual civilization. Thus, our writers and artists should be the conscious builders of socialist spiritual civilization.

Cultural construction must be completely carried out under the guiding principles of the 12th national congress and must develop under the ideological guidance of communism. Our writers and artists must play activating roles in the construction of material civilization and thus raise the ideological consciousness and level of morality in the masses, gradually developing more and more members of the socialist society into morally and culturally aware workers with strict discipline who may contribute greatly to society. Writers should use their works as a fresh and encouraging new phase for the establishment of socialist modernized construction and not allow negatively directed works to depress the reader and poison the atmosphere. Of course, literature should still make use of the bad and evil things in life, but the purpose of using such things should be to castigate them so that readers may gain some enlightenment from reading such things and be encouraged to actively strive for improvement.

Writers who are members of the Communist Party should take the leading role here. And this thus necessarily demands of us that we first improve our knowledge and understanding, strengthen our party allegiance and strictly follow the direction and policies laid down by the 12th national congress and thereby become a leading part of the creation of a new phase in socialist literature and art.

China's modernized construction must be planned and carried out on the basis of China's actual and objective situation. Thus, our literary creators must also work in the realities of China's present situation. China's revolutionary literature has produced vast and valuable historical experiences and has thus established our own theoretical system. We must cherish the achievements we have gained after so many years of struggle and then pass on and develop our revolutionary tradition. We must remember the importance of studying and borrowing from overseas literature and related experiences but we must not duplicate word for word the style and format of foreign literature. We must remain alert and continue to resist the corrosive influence of degenerate and decadent foreign literature.

Socialist literature and art must adopt plentiful and lively means to express and propagate socialist spiritual civilization with communism as its nucleus, and yet should not be too sermon-like or obviously graphic. Writers and artists should involve themselves in the very heart of everyday life, mixing with the masses and jumping out of the restrictive circle of self-expression. This is the fundamental path to raising the ideological consciousness and artistic level of the writer and artist so that they may establish a new phase in socialist literature and art.

Chen Guangzhong [7115 0342 1813]: "Films Should Aim at Fostering the Good-heartedness of the People"

Youths are the driving force behind the establishment of a new period in time, and the cinema is a key to opening the window of their hearts. Recently, there have been investigations into the situation of youths and their ideological attitudes in the factories, with questionnaires for young people being handed out. In response to the question "What do you like doing most of all?" 98 percent of the young people responded by saying that they liked films most of all. It is clear that the cinema is one of the forms of art which can relate most intimately with the masses, and in the case of young people it is an extremely attractive concept. The cinema exerts a very subtle influence on youths, in terms of ideological enlightenment and the edification and fostering of morals and aspirations. China's cinema must propagate communism but it should not adopt methods of vacant preaching. Instead, it should make use of varied and rich forms of art, with a lively and active style, to educate the youth of today. And indeed, we have a saying: "Facts speak louder than words." Thus, the characteristic of newsreel films is the portrayal of upright real people and real events which allow the young people to actually see the qualities of communism in our everyday lives. The use of moving events and stories tells the viewer that communism is not a hollow promise but that it actually exists all around us today, that those people twinkling with the shining light of communist thinking are not gods but that they exist and live among us and are the models for us to emulate.

Our teaching should make the young people of today try to overcome their own shortcomings with enthusiasm, patience, discipline and sobriety. We must make sure that we light the fires of their ideology so that we may bring together the disordered and decentralized faculae of youth to create those powerful beams of light which work toward the development of China, creating enormous energy. Thus, in our penetration into everyday life we must broaden, enrich and multiply the themes we use, we must analyze people's hearts with greater thoroughness and, in particular, we must eulogize those new people and new ideologies which are establishing a new phase in time. With the party line, we must accurately reflect the contradictions which appear in this new era. The establishment and development of this new era will not come about through smiles, fresh flowers and merry expression, but requires arduous work and tortuous struggle. In life there is both beauty and ugliness, both light and darkness. As we show new men of communism through the exposure of contradictions, the youth who are watching will feel doubly close to them and will attain a sense of respect and a need to study and emulate.

Our studios recently finished a documentary called "The Glorious Call," which involves an evaluation of the facts of everyday life so that youth viewers would be able to discern that which is truly glorious and beautiful and where it may be sought. Young people love and respect beauty. Thus, this film uses the spirit of communism to move toward beauty, to seek out beauty and to create beauty! I, a humble pawn in the field of cinematic news reporting, offer with sincerity and ardor, this tribute of spiritual nourishment of everyone, in particular our younger friends.

Yu Shuzhen [0060 3219 3791]: "Actors Should Pay Attention to the Social Effects of Their Performances"

The party, in defining the construction of a socialist spiritual civilization as the battle line in the 12th national congress, has meant that every party member, every revolutionary must come to understand his or her own duties and responsibilities in creating this socialist spiritual civilization. I am both a Communist Party member and an actor and I am determined to work from the very bottom of my heart.

Actors serve the people through their own performing skills. A song or a dance should never be belittled, for merely by jumping onto a stage and performing it one can influence the entire audience. Thus, every actor and actress should think about the social effects of his or her acting.

Just after liberation and the founding of the PRC, the party mood and the feeling of society was extremely good. The 10 years of social disorder brought chaos to people's ways of thinking and also caused tremendous damage to the party mood and the general atmosphere in society, while the damage done to the spirit of the young people which had been built up until then, was extensive. Since the implementation of our open door foreign policy, some of our young people have fallen under the influence of unhealthy foreign music. Since the third plenary session and, more importantly, since the symposium concerning problems of ideological front lines, we have been fighting against the "freedom movement" of the bourgeois classes and resisting the corrosive effect of bourgeois thinking, with the result that the situation has improved somewhat. However, there are still a number of young people who are still very keen on this decadent music. I feel that we must actively educate and guide these young people and that there should be no compromise. In particular, there should be no pandering to bad taste merely for the sake of "box office value." In August of this year, our troupe visited a certain town for performances. Before our visit, there had been many performances of programs with very little artistic value. Consequently, we decided to perform pieces with healthy content and not in keeping with the tastes of a small minority. Thus, they did not enjoy the performance and began to make trouble. However, we had the support of the vast majority of the audience and thus the healthy trends prevailed over the evil ones. Later, we traveled to Shenzhen for a performance. Before we gave our performance, some people suggested that we sing and perform some popular songs from Hong Kong and Macao. This we did not do. Instead, we continued to perform our orthodox songs. There were no catcalls and no derisory laughter, and the effect was very good.

Afterward, many young people in the audience said that they had not realized that China had such good music as that! This clearly illustrates how the audience was able to distinguish between the beautiful and the ugly.

Young people represent the morning sun; they have high spirits and are able to accept new things very quickly. However, their world views have not yet solidified and become firm and thus they find it easy to imbibe advanced and progressive things as well as corrupt and backward things. As a performing artist who is also a party member, I want very much to make use of healthy, progressive and pure things to mold their moral character, nurture a healthy interest and steer them actively onward and upward in order to create a socialist spiritual civilization.

Actors and performers should not only take care of the social effects they are producing while on stage, they should also remember the social influence created by their own behavior in general. The party Central Committee announced that art should serve the people and socialism. Thus, we should think about the needs of the people and socialism. I am a singer of folk songs and on average, I receive about 10 letters a day, of which about 6 or 7 come from the countryside. These letters are of great help to me and they immediately make me think of those who have written them and the countryside where they live. Under the influence of "looking toward money" and its ideology, some people have disregarded the social influence and in seeking fame and fortune, have begun singing decadent songs. In doing so, they have transgressed the ideal that the arts should serve the people and socialism.

In his report to the 12th national congress, Comrade Hu Yaobang said: In the next 5 years, we want to see a fundamental turn for the better in the party and society's mood and atmosphere. In order to achieve this, everyone must work together with mutual cooperation and our performing artists must constantly remember their task and must begin from within themselves.

Jiang Kun [1203 2492]: "Bring Healthy Literature and Art to the People"

In the wake of the important tasks outlined at the 12th CPC National Congress for the construction of a socialist spiritual civilization and as a young writer, I feel that the burden on me is by no means light!

Comic dialogue is a style of literature enjoyed by both men and women and young and old, suitable for both refined and popular tastes. One take lasts less than an hour and, by means of TV and radio, it is instantly transported into every household and every corner of the country. Because comic dialogue has these traits and advantages, our task and responsibilities are even greater. What should we bring the people? How can we help people relax after work and have the benefit of extremely interesting and arresting enjoyment? These are important questions for us comic dialogue writers and performers.

Comic dialogue is, by nature, very popular and widespread. Thus, we should try to improve the ideological and artistic value of the performances and not simply perform comic gags in order to cater to the needs of a small minority with poor taste, nor simply to try to get cheap laughs. In recent years, audiences and critics have criticized some negative trends in our productions of comic dialogue and we should be aware of this.

The establishment of a socialist spiritual civilization demands that more and more literary and performing pieces be of a high level in terms of style and quality, and this spurs us on to search ceaselessly and more deeply for new creative material and themes. Here, one of the most recent examples was a great inspiration for us. During the 12th national congress, I and a Comrade Li Wenhua were making changes and improvements to a piece called "Time and Spring" written by an amateur writer. The effects of the performance exceeded our expectations. Why was this piece, which lacked comedy, received so well? The reason was because the piece explained that young people should cherish time and should not waste their youth or spring. Today, young people generally feel that there is never enough time to do everything, while older people also wish that youngsters would appreciate time more. Thus, this piece expressed all these feelings. After the performance of this piece, I asked myself what is it that we should propagate most at the moment, and what is it that we should write about most at the moment. I feel that the most fundamental thing is to make full use of the characteristics of comic dialogue to reflect the pulse of our times, to propagate communist ideology. The 12th national congress pointed out that the masses and the cadres must unite their strength and struggle for the glorious goals we must achieve before the end of this century. But some people still display a certain "vagueness and uncertainty about communism." Hence, we must rightly spread the word of communism so that people may come to truly understand it.

In order to propagate the most advanced ideology in the world, our performers of comic dialogue must be extremely strict with themselves. First, they must arm themselves with communist ideology and, at the same time, must constantly try to improve themselves artistically. Thus, they should ensure that they articulate with purity and do not allow filth and dirt to drift into their speeches, thereby creating linguistic pollution. They should avoid sarcasm and vulgar forms of presentation. Thus, in general they should give rein to the educational role of comic dialogue with a high degree of ideological and artistic authenticity, so that through their laughter the audience is molded to possess a high degree of moral values so that they may seek truth and beauty and despise and abhor ugliness and evil. Of course, this is easier said than done. But with study, refinement and endeavor we can undoubtedly raise the standards of comic dialogue.

Chen Haosu [7115 8504 5685]: "The Glorious Mission of the CYL"

The CYL has a glorious mission in the establishment of a socialist spiritual civilization.

Communist ideology forms the nucleus of socialist spiritual civilization. The CYL is a school where the youth of China can learn the practical side of communism. In historical terms, several generations of true communist fighters have always grown out of the ranks of the CYL, and among them are some of the glorious pioneers of China's communist movement. Some are the old generation of revolutionaries who, in the intervening years, have jumped to position of leadership of the country within the party and, of course, even more of them are frontline cadres and activists who fought in all the revolutionary struggles and socialist upsurges. Today, the CYL shows the way for China's youth to throw itself completely into the practical program for the four modernizations, to study Marxism-Leninism-Mao Zedong Thought as well as modern sciences and culture so that they may become a new generation of people full of ideals, morals, culture and discipline who may exert greater and greater influence in helping the party foster and nurture a new generation of communist fighters.

The CYL must play a penetrating and forceful role in the establishment of a socialist spiritual civilization, and this role should include both the construction of culture and ideology. The CYL should earnestly support and promote the development of all cultural causes, such as education, the sciences, art and literature and sports, and should activate young people to delve into the realms of knowledge, encouraging them to study culture, science and technology. The CYL must organize and help young people to study on their own and achieve results. We should take note of the guiding words of Lenin, who said that one can only become a communist by using the entire treasure house of knowledge created by man to enrich one's own head.

The CYL is a well-developed youth organization carrying the flag of communism. For this reason, the CYL must preserve its communist purity. We must recognize that in some young people the poison of the Cultural Revolution's anarchy and out-and-out egoism has still not been flushed out and, in addition to this, some still suffer under the influence of foreign bourgeois thinking. In order to improve young people's strength to resist such things and to help them develop a communist world view, we must build a line of defense into their ideology. Thus, we must teach every CYL member to make demands on him or herself for the sake of the principles of communism and to absorb more and more young people within his or her sphere of action, getting them to join the communist ranks. In order to set up a communist world view and ways of thinking, we must ensure that young people study Marxism-Leninism-Mao Zedong Thought. These are the basic tasks of the CYL. This work should be integrated with the great efforts of the party, which is at the moment implementing policies to bring order out of chaos and to establish a great new era. Advances in the ideology of young people in recent years have been the results of the practical study of communism. The CYL should take a leading role in urging young people to developing such policies as "the five stresses and four beauties," "setting up a new mood" and "serving you," and in doing so, struggling toward a turn for the better in the social mood. Such activities are, in fact, an active and lively way of educating young people in ideology, morals and discipline and help to endlessly raise the level of their moral standards and elevate their revolutionary spirit with great vitality.

Today's youth are the future of the country. The CYL is the party's helper and reserve force. The glorious blueprints drawn up at the 12th national congress will become wonderful realities in the hands of this generation of youth, and one of the conditions which will decide whether the young people can carry such a great burden is whether the CYL is able to unite the young people to become a vast and mighty army of successors to communism. The cadres of the CYL believe that we will not let the party or the people down in their expectations and hopes for us and that we will arduously work to organize and construct a "school for studying communism through actual practice" which is worthy of its name so that we may develop a frontline force for the establishment of a socialist spiritual civilization and achieve our glorious mission with even greater success.

Zhang Liqun [1728 2745 5028]: "In Fostering New Socialists, It Is Imperative That We Continue With Communist Education"

The establishment of a socialist spiritual civilization involves many things, and communist ideology is the very nucleus of it. The construction of a socialist spiritual education must be guided by communist ideology.

From the 60-odd years of practical party experience, we can see that whenever communist education is grasped, our work teams spring to life, the mood of the party flourishes and our causes develop and move forward. Whenever we slacken our grip on communist education, our causes stop their forward movement and even suffer setbacks. Whenever we think of the spirit of Yanan or the spirit of Nanniwan, it is heartening indeed, and these have become the symbol of the indomitable revolutionary spirit of the old generation of revolutionaries, embodying the arduous struggle and glorious tradition in the party's and the people's communist movement.

During the 10 years of social chaos, the wonderful tradition and revolutionary spirit of the party suffered terrible damage and the crazy fashions of "smashing, beating and looting" and the "spirit of rebellion" and their disastrous results have made us all very consciously aware of the fact that the construction of a socialist spiritual civilization ties in closely with the future of our party and our country as well as our general destiny.

In order to correctly carry out the construction of a socialist spiritual civilization, we must first improve the party mood. The exemplary role of the party is extremely important. Similarly, we must tackle well the question of educating young people in the principles of communism. There are 390 million young people in China, making up two-fifths [as published] of the total population. Young people represent the country's aspirations and future, and the realms of their ideology and the quality of their culture decide the future of our country. We must use Marxism-Leninism-Mao Zedong Thought as well as the spirit of communism to educate and arm the young people of China so that they will resolutely carry high the banner of communism and give themselves totally to the communist cause. Lenin said: "We are the party of the future, and the future belongs to the youth of today. We are the innovative party, and young people always want to be ahead of others in terms of innovation. We are the party continuing the selfless struggle against the corrosive elements of the past, and it is young people who always want to throw themselves, first of all, into a selfless struggle." ("Collected Works of Lenin," Vol 11, p 338) The young people of China possess a glorious revolutionary tradition and the young masses want to join the party in taking the broad road to communism. Nevertheless, we must remember that young people, having had their educational foundations smashed during the Cultural Revolution, can tend to veer in the wrong direction since their world views have not had a chance to fully develop and be consolidated. We must start by examining the realistic situation of young people in China, study their characteristics and seek the truth about them and develop the teaching of communist ideology so that they may throw themselves completely into the middle of the practical side of the communist movement.

The party has vast experience in teaching communist ideology to young people and such experience should be passed on and implemented. However, after the 10 years of social chaos, there were some changes in the objective state of young people in China and they took on some new characteristics. In the country's new era of opening up a new phase for the construction of socialist modernization, new situations and new problems are bound to arise. For example, the recently implemented open door policy has meant that while we import advanced science and technology and administrative and management experience from capitalist countries, some very poisonous and corrosive things from capitalism have also seeped in, and some young people who lack the ability to differentiate and resist cannot help but be influenced to various extents. Hence, we must, with lucid estimations, probe and promote healthy and mature rules and regulations for young people, making use of a wide variety of lively methods to guide them into accepting Marxism and becoming full-fledged communists.

When we carry out communist ideological education for our young people, we cannot simply rely on schools and the CYL. We must enlist the strength of the whole society and so organize a mighty and powerful army to construct a socialist spiritual civilization. Everyone, from all levels of the party and the government as well as every member of society and the front line, must bear the responsibility of educating the youth of China with communism. In this work, we must be aware of the characteristics of youth and we must guard against simplistic, crude and formalistic methods.

TAKE THE ROAD OF COORDINATED DEVELOPMENT OF AGRICULTURE, INDUSTRY AND COMMERCE

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 37-40

[Article by Yang Yichen [2799 2496 6591]]

[Text] For many years, Heilongjiang Province has one-sidedly sought the development of heavy industry and neglected the development of agriculture and light industry. This has resulted in a serious imbalance in the proportionate relationship between agriculture, light industry and heavy industry and a prolonged state of backwardness in the production of consumer goods for daily use and in diversified operations in the rural areas. As early as 1962, Comrade Zhou Enlai took us to task for not having our own local industry and scolded us for not making full use of our advantages and for "begging for rice with a golden rice bowl." He was indeed speaking the truth, hitting the nail on the head. In the past, on various occasions we did try to lengthen these two "short legs" of light industry and diversified agricultural operations. However, because of the influence of "leftist" thinking and our imperfect understanding of the superior points of our province, we failed to grasp the opportunity. Since the 3d Plenary Session of the 11th CPC Central Committee, we have seriously implemented the Central Committee's eight-character policy of readjustment, restructuring, reorganization and upgrading. We have attained a deeper understanding of the abundant resources and superior economic points of our province. Guided by the thought of treating the whole nation as a chessboard and commencing with bringing our superior points into full play, we began to pay attention to the development of the light and textile industries and diversified operations in the rural villages. This has brought about a relatively big change in the economic structure and we have begun to tread the new road of coordinated development of agriculture, industry and commerce. In our actual experience, we have come to realize that from the point of view of a province, if we want to implement the policy of readjusting the national economy properly, we must earnestly sum up the experiences and lessons of history and properly solve the following five issues in our guiding thought:

1. Gradually Establishing an Economic Structure Suitable to the Full Exploitation of the Superior Points of Our Province

In readjusting the proportionate relationships and establishing a rational economic structure, we cannot depend on subjective wishes but must consider how to make full and rational use of our region's superiority in resources and economic technology, and the objective needs for the planned and proportionate development of the national economy. What is the criterion of whether an economic structure is rational or not? This principally depends on whether or not the economic development can satisfy social needs and ensure the coordinated development of all the sectors of the national economy; on whether or not we have paid attention first to the actual conditions of our province and fully utilized its manpower, materials, financial power and natural resources and on whether or not we can vigorously promote scientific and technological progress and raise the labor productivity rate, so as to enable production to increase at a faster rate and achieve better results. In the past, we lacked a sufficient understanding of this point. Despite our many years' work in Heilongjiang, we have not yet acquired a real and comprehensive understanding of the province. We frequently paid special attention to its resources of coal, timber and crude oil for the development of heavy industry (which is correct) but scarce attention was given to the development of the abundant resources of the light and textile industries and the food industry. Moreover, over a long period of time we have been satisfied with our province serving as a raw materials base but seldom engaging in processing work of the primary grade, far less in more intensive types of processing. We even went so far as to forsake our superior points in preference to our weak ones and devoted much strength to the development of small iron and steel industries despite the lack of iron ore resources in our province. As a result, we paid a heavy price but achieved poor results.

Finally, through summing up the experiences and lessons gained, we began a provincewide large-scale economic investigation and acquired a more intensive knowledge of the superior points of our province. The guiding thought of economic readjustment became clear in our minds and we no longer indulged in such foolishness as giving up our strong points and using our weaknesses. We decided to bring into full play the superior points of 12 categories of resources, these being grain, beans, sugar, milk, potatoes, hemp, fur, silk, chemicals, leather, timber, and reeds. We placed great stress on the development of the light and textile industries and gave them first priority in the provision of funds, energy, materials and technology. At the same time, we decided that with regard to heavy industry, the structure of its products should be readjusted, the direction of its service reoriented, and the relative weight of its service to light industry and to agriculture continuously expanded. On the side of agriculture, we decided that on top of grasping well grain production, we would actively develop economic crops and diversified operations and promote the overall development of agriculture, forestry, animal husbandry, sideline production and fishery. In the course of readjustment, we strove vigorously to make full use of our strong points, avoided our weak points and brought into full play all the superior points of our province being rich in resources and possessing a relatively firm industrial foundation, a fairly strong technology, a flourishing communications system, and extensive markets. Our objectives were to build our province into the following sorts of base area: a modernized agricultural base concentrating on production of commodity grain, and including the overall development of economic crops and diversified operations; a light industry base having the food and textile industries as its focal points of development; and a forestry base featuring afforestation and placing the focal point on the comprehensive utilization of timber. In addition, we plan to develop our province into a base for energy with emphasis on the output of coal and crude oil, and into a heavy industrial base with emphasis on the machine-building industry and the building materials industry. We thus proposed to build up a new-style economic structure featuring the coordinated development of agriculture, light industry and heavy industry.

Under the guidance of the above thinking, and following 3 years of concentrated effort, we have achieved relatively good results in the readjustment of the economic structure. The following are the results, comparing the 3 years previous to, with the 3 years after, the 3d Plenary Session of the 11th CPC Central Committee: The average annual grain output increased from 24.9 billion jin to 27.8 billion jin, and in the latter 3 years, the gross output value of agriculture increased yearly at an average of around 9 percent. In the gross output value of agriculture, the relative weight of economic crops grew from 9 percent to 15.4 percent, while that of diversified operations increased from 20.2 percent to 24.4 percent. As for industrial production, a number of small iron and steel plants and chemical fertilizer plants were closed and the internal structure of industry was readjusted. Light industry has enjoyed a rapid development every year: an increase of 16.3 percent in 1980 over 1979; and an increase of 13.6 percent in 1981 over 1980. A relatively big change was effected in the proportionate relationship between light industry and heavy industry. The proportion occupied by light industry in the gross output value of industry rose from 26.3 percent in 1978 to 36.8 percent last year. The entire economy has attained new vitality, laying strong foundations for further readjustment.

2. Implementing Comprehensive Readjustment of Agriculture, Industry and Commerce and Stressing the Production of Consumer Goods

Our readjustment work aims at solving the problem of the imbalance in proportionate relationship in accordance with the Marxist reproduction theory, and the regulations governing the planned and proportionate development of the national economy, to enable the various departments of the national economy to promote each other and not to become mutually disjointed. Hence, we feel that to do a good job of readjustment, first of all we must think along the lines of effecting a comprehensive readjustment. In other words, we should not confine ourselves to readjusting the individual enterprises themselves or to readjusting agriculture and industry separately. Rather, we should carry out, on a provincewide basis and according to step by step plans, a comprehensive readjustment of agriculture, industry and commerce.

When the eight-character policy was first adopted, in order to strengthen light industry, we grasped the problem of the raw materials for agricultural and sideline products as a focal point of work. After more than a year, the main contradiction was changed and the problem became one concerning a serious lack of processing capacity in the light, textile and food industries. This made us realize that if we isolatedly readjusted a certain area or link in the production process, the chances would be that we might attend to one thing and lose sight of another and that once we solved an old imbalance, a new imbalance might appear. In this way, it would be difficult to ensure coordinated economic development. In order to solve this problem, we grasped the central link in the production of consumer goods and decided on the focal development of some 10 trades and products including sugar refining, textiles, food products and the comprehensive use of timber. At the same time, we combined together the work of readjusting the industries and reforming the economic structure. In order to break through the departmental boundary limits and facilitate the development of focal-point products, we have set up over 10 small specialized leadership groups of which 9 are concerned with the production of consumer goods. The various groups are under the charge of committee secretaries, standing committee members and provincial vice governors, with each heading one or two of these small groups. They worked hard on each industry and product and tightly grasped the different stages ranging from processing of the raw materials to passing through the circulation channels. They did their work thoroughly and achieved fairly good results. For example, sugar production increased from 145,000 tons in 1978 to 344,000 tons in 1981; confectionery production from 15,000 tons to 27,000 tons; output of milk products from 10,400 tons to 18,000 tons; and the number of spindles in the textile industry increased from 340,000 in 1978 to about 500,000 in 1981. The comprehensive utilization rate of timber's "3 leftovers" (namely, leftovers from tree felling, processing and product-making) reached 27.7 percent, the output capacity of artificial fiber boards using the "3 leftovers" as raw materials amounted to 360,000 cubic meters, and the gross value of its output was over 500 million yuan. Meantime, in order to develop the light and textile industries, it was necessary to expand their production capacity and to undertake the needed technical rebuilding. This gave new tasks to such heavy industry departments as the machine-building industry and others and made them reorient their direction of services and readjust the structure of their products. The healthy development of heavy industry was thus promoted. In this way, if the 10 or more specialized small groups, which take consumer goods as their focal point, continue to tightly grasp their work in accordance with plan, then it may be estimated that by 1985, the economic structure of Heilongjiang Province will have become rational and a new appearance will emerge in the situation.

Following the development of the light and textile industries, the demand for raw materials has sharply increased. This, in turn, promoted readjustment of the agricultural structure and development of economic crops and diversified operations. We plan that under the conditions of a steady increase in grain output, we shall basically change the agricultural structure from its unitary, subsistence type and gradually attain the objective of making the output value of grain, economic crops and diversified operation constitute one-third each of the gross output value of agriculture. Thus, we shall put Heilongjiang on the road to modernized large-scale production which calls for little investment but achieves handsome results and a high commodity production rate. At the same time, we shall bring into full play the role of agricultural mechanization and in this way liberate a large agricultural labor force for the further development of enterprises in the communes and production brigades as well as the processing industry for agricultural and sideline products. We shall thus endeavor to achieve the coordination between industry and agriculture and between the urban and rural areas. This is a road which we must traverse in order to make the rural villages truly prosperous. Indeed, it appears impossible that the rural villages will become truly prosperous if we confine ourselves only to grain production without developing economic crops and diversified operation. It will also be impossible if we endeavor to develop only agriculture without developing the processing industry.

Development of agricultural production will bring in its wake higher demands on the commodity circulation channels. This is to say, the circulation channels must be widened, the number of turnover points or stoppages must be reduced, the work style in business must be improved, and commodity circulation must be facilitated. In this way, we shall gradually form a "one dragon" system whereby purchasing, processing and marketing are linked together. This "dragon" will find its way not only into the whole province and whole country but also into the world market. Persistently grasping our work in this way will transform the economy of our country into a chain of interlocking stratagems of coordinated development of agriculture, industry and commerce whereby industry will promote agriculture, agriculture will lead industry, light industry will promote heavy industry, heavy industry will lead light industry, production will promote circulation and circulation will lead production. The whole economy will thus embark on the road to healthy development.

This "chain of interlocking stratagems" of coordination of agriculture, industry and commerce will also promote changes in the ownership system and the labor employment structure. Over the past few years, based on the great development of socialist collective economy, in the cities, municipalities and market towns in our province, the individual handicraft industry and repair trades have achieved a certain degree of development. The number of establishments engaged in collective and individual commerce, restaurant trade and repair trades increased from 33,000 units in 1979 to 107,000 units last year, an increase of 220 percent. This speed of development has not been seen in the past 30 years. These commercial units and service trades provided employment to some 800,000 people of whom 340,000 were young people awaiting employment. If we press forward along this road of the "chain of interlocking stratagems," the ultimate trend of development will be unification of agriculture, industry and commerce embracing the coordinated development of the urban and rural areas, of industry and agriculture and of the counties, communes and production brigades. To conform to the development of this situation, we still need to strive hard to do a good job of the construction of small cities and towns.

3. Making Use of the Superiority of the Machine-Building Industry To Mend the Insufficient Processing Capacity of Agricultural and Sideline Products

Following the 3d Plenary Session of the 11th CPC Central Committee, the rural policy adopted has been welcomed by the populace. Development of economic crops and diversified operation has been rapid. A large quantity of raw materials has been provided for the light industry. Some of the light industrial plants which used to struggle for raw materials now have an ample supply and have to dispose of, or sell, their raw materials in stock. In fact, in some cases, stockpiling of large quantities of raw materials has actually occurred. Because of the overabundance of sugar beet, the existing sugar refineries had to extend their sugar-pressing period and overloaded their machinery with work. The output volume of hemp was excessive, and the only thing to be done was to export it. Due to the weak processing capacity of milk products and their irrational geographical distribution, there was much wastage of fresh milk once the busy purchasing season was over. Large quantities of edible oils have to be stockpiled owing to the shortage of processing facilities. A situation of this kind on the agricultural front indicates that there is an urgent need to raise the processing capacity for agricultural and sideline products.

How shall we solve the problem of insufficient processing capacity for the light and textile industries and the food industry? We have depended mainly on utilization of the existing strength of the machine-building industry and on bringing the superiority of the machine-building industry into full play. In our planning, we closely linked the development of the light and textile industries with the readjustment of the machine-building industry and, in a planned manner and systematically, organized the machine-building industry to serve the development of light industry in our province and to produce whole-set equipment for the processing of agricultural and sideline products. Within the machine-building industry, a rational system of division of work has been effected, production of specific products and the direction of service have both been fixed. Thus, some products were intended for the comprehensive utilization of timber, some to serve the light and textile industries in tapping their potentials, in restructuring and in rebuilding, while some were to serve the sugar refining and food industries. At the same time, full utilization was made of the foundation of existing light industry enterprises to continuously develop processing work to a more intensive degree and, through the comprehensive utilization of industry, form a package of interlocking strategies for the processing of raw materials, preliminary grade products and final grade products. As a result, the machine-building industry came to life, the processing industry developed and development of agriculture was promoted. In 1981, the value of the products of the machine-building industry serving light industry increased by 14 percent over 1978 and the downturn in production of the machine-building industry became an upturn.

4. Speeding Up the Raising of Economic Effect

The 10 economic construction guidelines given up by Comrade Zhao Ziyang at the 4th Session of the 5th NPC had as their central point the improving of economic effect. He clearly pointed out: "Our country's national economy must traverse a new road at a relatively dependable speed, with relatively good economic effect and more real benefits to the populace." It is a valuable experience gained after having paid a very high price. It is the starting point of performing further a good job of economic readjustment and is particularly applicable to our province. Our province has plentiful natural resources, a fairly good industrial foundation and has made rather large contributions to the state in various economic sectors such as coal, timber and oil. However, generally speaking, our economic effect is rather poor. At present, our economic targets are not only lower than the national average but also lower than our relatively higher historical level. In order to change this contradiction of high superiority on one side but low economic effect on the other, what is most important is to effect a fundamental change in ideology and to avoid making high targets and giving blind directions. Indeed, we must refrain from such foolishness as undertaking high sounding projects which ultimately produce no actual results. We must combine proportion, speed and effect together, grasp speed with an eye to the economic effect and make speed abide by effect. We must pay attention to improving the economic effect in the enterprises and, more importantly, to improving the overall economic effect in the structure as a whole.

Over the past few years, what we did was to start with restructuring the irrational economic structure and then proceeded from various directions to improve the overall effect on the economy as a whole. 1) Aiming at satisfying social demand, we strengthened planned production and vigorously developed those consumer goods of daily use which belonged to the so-called "short-line" and urgently needed category of goods but which possessed the necessary conditions for increasing production. These goods included sewing machines, bicycles, wooden clocks, confectionery, beer, cigarettes, and so on. The objective was to make them marketable. 2) Taking the original light industry enterprises as the base, the potentials of current enterprises were fully tapped. In the case of light industry "combination" and "joint operation" of the enterprises were carried out, whereas in the case of the machine-building industry the governing theme was to place emphasis on "both heavy industry and light industry" and on "both products for military use and products for civilian use." Adhering to the principles of economic rationalization and specialized coordination, we organized the heavy and light industries to carry out technical rebuilding and development of their famous brand products and to enlarge the production quotas of the focal products of light industry. In the establishment of new enterprises, priority was given to those projects which involved little capital outlay, could reap quick results and could attain large benefits. We followed the theme of combination of big, medium and small projects but refrained from undertaking any more the wasteful "small, native and common" projects. In the case of certain modern projects which one single enterprise could not handle, joint operation with other enterprises, or with the state or collective, was advocated. We carried out well the job of achieving overall balance and stopped the practices of "blind construction" and duplicate construction. As for enterprises of an irrational structural composition, gradual readjustment was made while in the case of those enterprises whose products were of a poor quality and not marketable and which involved a high consumption rate of raw materials and energy in production, and which achieved low economic results and generally were lacking in competitive power, we took firm steps to close, or merge, or shift them to other lines of production or trades. 3) Concurrent with the expansion of the processing capacity of the light and textile industries, we tightly grasped the technical rebuilding of the older enterprises and performed a good job of improving the quality of existing products or replacing them with new and better products. The poor and low quality of the benefits derived from our industry was attributable not only to the imbalance in proportionate relationship but also to the low technical level of the enterprises and the poor quality of their products. Why is it that certain products of light industry are stagnant in sales, or are stockpiled in the warehouses, or are unable to be sold outside the province or are incapable of entering into the world market? The reason is not that there is no market demand for them but mainly that the structure of the products is not rational, their quality is poor and they generally lack competitive power. The aluminum alloy bicycles with the brand name "Flying Dragon" which are made in our province have received general acclaim and the loudspeakers produced in Zhaodong County have been enjoying flourishing sales throughout the country all because of the products being new and relatively good in quality. We deeply feel that concurrent with the readjustment of the proportionate relationship between light industry and heavy industry, we should readjust the technological structure, coordinate the efforts to increase production capacity with the efforts to raise the technological level, heavily strengthen the technological strength of industry, actively promote the development of new products, speed up the improvement and replacement of old products and transform the backward countenance over sized and ugly products. Only in this way can the economic effect be raised. 4) We firmly grasped management and control, strengthened the weak links in the circulation channels, further readjusted the relationship between industrial merchants, agricultural merchants and commercial merchants, opened up markets and oriented ourselves toward service to the whole country and the international markets. We believe that only in this way can we open up financial resources, accelerate capital turnover and achieve better economic results. We have learned from actual practice that increasing speed is easy but raising the effect is difficult and that stressing speed alone may easily make us forget about effect. Naturally, stressing effect does not mean that speed is not needed, since speed and effect are united.

5. Taking a Nationwide View of Bringing Our Province's Superiority Into Full Play

Following the continuous progress in readjusting the national economy, we have increasingly felt that from the standpoint of a single province it is extremely important to foster the ideology of treating the whole country as one chessboard. This is in fact ordained by the very nature of this big united socialist country of ours. Furthermore, we have brought forth the policy of "minding the whole situation, sharing difficulties, bringing one's superiority into full play, and making the utmost contributions." Politically, we maintain solidarity with the party Central Committee. Economically, we are subservient to the centralized and united directions of the State Council. The country as a whole represents the overall situation of which a province is a part. A part should follow the whole and the theme "suiting measures to local conditions" should be altered to "suiting measures to national conditions." In the past, we have made contributions to socialist construction. Now we must still keep the whole situation in mind and make even more contributions. In the course of readjustment, we must ensure fulfillment of the national plan, particularly fulfillment of the tasks related to the focal products such as grain, coal, crude oil, timber, electric machines, and so on. The quantities of raw materials and products we should deliver must be so delivered. Under the logical premise of relatively stabilizing the sowing area for grain, we should principally depend on raising the per-unit yield and developing economic crops and diversified operation. At the same time, we should sum up the lessons from history and under the logical premise of ensuring the whole interests of the state, we should pay attention to the economic interests of this province, make full use of our strong points but avoid our weak points, fully utilize our superiority in natural resources and promote the development of light and textile industries and the food industry. After having fulfilled the assigned delivery tasks of our products and resources, all the raw materials for our light industry which can be processed locally should first of all be processed locally. This is a comparatively better method, and is advantageous to both our province and the state. In bringing our superiority in resources into full play, attention should be jointly given to demand and feasibility. Due to our limited funds and technological strength, concerning those raw materials and primary-grade products which, due to our limited funds and technological strength we lack the necessary conditions to fully utilize at the moment, either let the state ship them out on a unified basis, or let our brother provinces and municipalities join with us in handling them on the principle of equality and mutual benefit. We heartily welcome our brother provinces and municipalities possessing the necessary technology and capital but lacking the necessary resources to cooperate with us in organizing joint operation enterprises in such sectors as the food industry, light and textile industries, timber and its comprehensive utilization, and so on. Let us in this way further develop this treasure house of Heilongjiang.

HOW TO STUDY THE SIXTH PART OF THE REPORT TO THE 12TH CPC NATIONAL CONGRESS

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 41-45

[Article by RED FLAG Editorial Office for Theoretical Education; passages within slantlines published in boldface]

[Text] This part of the report deals with the task of building our party and making it a strong leading core for the cause of socialist modernization as required by the new party constitution. It begins with an explanation of the general principle guiding the revision of the party constitution and the main points of the draft. It then goes on to expound the following four tasks which we must concentrate on in tackling party building:

First, improve the party's system of democratic centralism and further normalize inner-party political life.

Second, reform the leading bodies and the cadre system and ensure that the ranks of the cadres become more revolutionary, younger in average age, better educated and more professionally competent.

Third, strengthen the party's work among the workers, peasants and intellectuals and establish close ties between the party and the masses.

Fourth, consolidate the party organizations step by step in a planned way so as to effect a fundamental turn for the better in the style of the party.

Lastly, it gives the whole report a summing-up.

In studying this part of the report, we can divide the beginning, the four tasks and the summing-up into six main points. We can then refer to relevant documents and materials to better understand the substance and essential spirit of these main points and concentrate on studying how to do a better job of party building in accordance with the requirements of the party Central Committee.

/In studying the beginning of this part, it is possible to achieve a better understanding by attaching importance to the following: First, better understand the general principle guiding the revision of the party constitution in the light of the characteristics and needs of the new historical period. Second, find out by means of comparison and contrast to what extent the new party constitution has discarded the "left" errors in the constitution adopted by the 11th congress and carried forward the merits of the party constitutions passed respectively by the 7th and 8th congresses. Third, better understand the significance and main points of the revisions of the party constitution./

The report pointed out that the general principle guiding the revision of the party constitution is to set more exacting demands on party members, enhance the fighting capacity of the party organizations and uphold and improve party leadership in conformity with the characteristics and needs of the new historical period. In essence, conformity with the characteristics and needs of the new historical period chiefly means:

1) Our party is a political party in power and occupies a leading position in the life of the state. This position as a political party in power makes it easy for our comrades to be tainted with bureaucratic habits and to become arrogant and conceited. The danger of divorcing oneself from reality and from the masses has increased rather than diminished. Hence our party is confronted with new tests and must set more exacting demands on party organizations and party members. This problem was discussed at great length in the report of the eighth party congress on the revision of the party constitution but was not followed up earnestly. This time, on the basis of summing up positive and negative experiences, the 12th party congress took our party's position as a political party in power into full account and set forth stricter requirements for party building. These demands are all embodied in the new party constitution.

2) In line with its position as a political party in power, our party must maintain sound political life and better adhere to the principles of democratic centralism and collective leadership. Inner-party political life started to become abnormal in the late 1950's. During the period of the "Great Cultural Revolution," in particular, the party's principles of democratic centralism and collective leadership were seriously undermined. It is precisely on the basis of summing up experience and lessons in this regard and in conformity with the need to set things right that the 12th party congress included a series of stipulations to this end in the party constitution.

3) The new historical period requires our party to shift the focus of its work to leading the cause of socialist modernization and build a high level of socialist spiritual civilization while working for a high level of material civilization. It requires us to develop socialist democracy and strengthen the socialist legal system. It also requires us to ensure that the ranks of our party's cadres become more revolutionary, younger in average age, better educated and more professionally competent. It is precisely in conformity with these requirements that the 12th party congress adopted clear-cut stipulations in the party constitution.

4) Our party style was seriously damaged during the 10 years of domestic turmoil. Thus, one of our important tasks for the immediate future is to effect a fundamental turn for the better in our party style. It is precisely in conformity with this requirement that the 12th party congress adopted appropriate stipulations in the party constitution regarding the activities of party organizations and the qualifications of party members.

In other words, our party's position as a political party in power, the responsibilities entrusted to our party by history and the present state of our party style all place higher demands on party building in the new historical period. In the course of our study, we must analyze existing problems in our party in the light of the four points discussed above in order to acquire a better understanding of the general principle guiding the revision of the party constitution.

On the basis of summing up experience in party building over the years, the new party constitution has made many changes in the constitution adopted by the 11th party congress. It has discarded the "left" errors in that constitution and carried forward and developed the merits of the constitutions passed respectively by the 7th and 8th party congresses. Thus, it suits the characteristics of the new historical period and the needs arising from actual party life.

The constitution adopted by the 11th party congress emphasized the need to uphold "the basic line of the socialist period" and the theory of "continuing the revolution under the dictatorship of the proletariat," and totally affirmed the "Great Cultural Revolution." It set forth the need to "carry out many more great cultural revolutions," the need to expel "unrepentant persons in power taking the capitalist road" from the party, and so on. All these are "left" errors carried over from the constitutions passed respectively by the 9th and 10th party congresses. These errors were systematically sorted out in the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" and should of course be discarded in the new party constitution.

The constitutions passed respectively by the seventh and eighth party congresses were drawn up under situations in which the party's guiding ideology was relatively correct and inner-party political life was relatively normal. Therefore, their provisions on various aspects were more scientific and practical. Take the party's general task for example. On the basis of an analysis of China's national condition, the constitution passed by the eighth party congress stated that the task of the party was to lead the cause of socialist modernization and that the fundamental objective of our party in all its work was to satisfy the material and cultural needs of the people. With a view to strengthening party building, carrying forward the fine traditions of our party and enhancing the fighting capacity of our party, the constitutions passed respectively by the seventh and eighth party congresses both expounded in their "general program" the importance of maintaining party unity, following the mass line, develop criticism and self-criticism, adhering to democratic centralism and wholeheartedly serving the people. As far as the party's principle of democratic centralism, the obligations and rights of party members, the relationship between the party and the CYL, etc., were concerned, the provisions in the constitutions passed respectively by the seventh and eighth congresses were more detailed and clear-cut. These good points have been carried forward and further developed in the new party constitution. For this reason, the new party constitution is an improvement on all the previous constitutions and is fuller in content.

To begin with, the new party constitution has a "general program" which is more substantial in content. It gives us a more comprehensive and scientific outline of the party's character and guiding ideology, its long-term and immediate objectives, its basic requirements for party members and party organizations and the basic principle of how the party should correctly play its leading role. The main content of the revision of the party constitution can be summarized in the following three major aspects: First, it sets more exacting demands on party members, party cadres and grassroots organizations than those in all our previous constitutions and adds a new chapter on party cadres which expects more from them than from ordinary party members. Second, it lays down more systematic and all-round provisions for the principles of democratic centralism and collective leadership as practiced by the party and emphasizes in particular that all major issues must be decided upon by party committees after democratic discussions and that all forms of personality cult must be forbidden. It also stipulates stricter provisions for party discipline. Third, it makes many new provisions for improving the systems of the central and local organizations, tightening party discipline, reinforcing discipline inspection organs and strengthening grassroots party organizations.

These changes in the party constitution have been made so we can strengthen and improve party leadership and build our party into a strong leading core for the cause of socialist modernization in the new historical period. Provided that the whole party acts strictly in accordance with the requirements of the new party constitution, there will be a fundamental turn for the better in the style of our party, its fighting capacity will be enhanced, its prestige will rise and it will be able to preserve the purity of communism and never degenerate.

/In studying the first task, we must fully understand the significance of improving the system of democratic centralism in the whole party and normalizing inner-party political life on the basis of the integration of theory and practice. We must also make clear the relationship between tightening party discipline and improving the functioning of democratic centralism./

Democratic centralism is the basic organizational principle of the party and requires that we practice a high degree of centralism on the basis of a high degree of democracy. It reflects the relationship between the party and those led by the party, between higher party organizations and lower organizations, between individual party members and the whole party, between central and local organizations on the one hand and the masses of party members on the other. Without a high degree of democracy as our foundation, we will never be able to achieve correct centralism and will develop patriarchal ways of one person deciding matters arbitrarily. Without a high degree of centralism, we will never be able to achieve true democracy and will end up in a state of excessive democratization and anarchy inside the party. Thus, in order to ensure a high degree of centralism and unity within the party on ideological and political matters and ensure the normalization of inner-party political life, it is necessary to improve the functioning of democratic centralism in the whole party. In carrying out democratic centralism, it is necessary to properly handle the relationship between higher and lower levels and between collective leadership and individual responsibility. From history, we can see that rightist and "leftist" mistakes usually had something to do with our failure to correctly handle these two relationships. In the period from its founding to the early years after the establishment of the PRC, our party implemented the principles of democratic centralism relatively well and inner-party political life was fairly vigorous and lively. This was essentially because we did a relatively good job of handling these two relationships. The report of the eighth party congress on the revision of the party constitution emphasized in particular the importance of properly handling the relationship between higher and lower levels, upholding the principle of collective leadership and opposing the personality cult. After the congress, the personality cult gradually appeared and developed and major issues were no longer decided upon after holding collective discussion according to the principle of democratic centralism. Usually an individual or a few people had the final say. Patriarchal practices of "what I say goes" and placing oneself above the organization developed constantly. Political life in the party and state, particularly in the Central Committee, grew more and more abnormal, leading eventually to the decade of domestic turmoil. We should always bear in mind this lesson of history about how the wrecking of the system of democratic centralism brought great harm to the party and the people.

On the basis of summing up historical experience, our party has, since the 3d Plenary Session of the 11th Central Committee, laid great emphasis on the need to uphold democratic centralism. As a result, political life in the party, and first of all in the Central Committee, has gradually returned to the correct path, the path of Marxism. There has also been marked improvement in the political life of many local party organizations. This is one of the basic reasons why our party has been able to formulate correct principles and policies and make important achievements in various undertakings in recent years. However, there are still many party organizations which have not done a good job in implementing the principle of democratic centralism. On the one hand, undemocratic practices and patriarchal ways have still not been eradicated. On the other hand, cases of decentralism and liberalism exist to a serious extent. In order to enhance the fighting capacity of the party, we must conduct thoroughgoing education on democratic centralism in accordance with the requirements of the new party constitution and get rid of these unhealthy phenomena.

Strict discipline is an important guarantee for improving the functioning of democratic centralism in the whole party and normalizing inner-party political life. The basic principle of democratic centralism is: individual party members are subordinate to the party organization, the minority is subordinate to the majority, the lower party organizations are subordinate to the higher ones, and all the constituent organizations and members of the party are subordinate to the National Congress and the Central Committee of the party. Every organization and member of the party must resolutely adhere to this basic principle. No one is allowed to go his own way and carry out only those principles, policies and decisions which are to his liking. Otherwise, the party will not be able to achieve the unity of will, acquire fighting capacity and fulfill its tasks. Not only will stressing the need for strict party discipline not hamper the development of inner-party democracy but is an important prerequisite for ensuring the normal democratic life of the party. The new party constitution explicitly stipulates that violations and expropriations of the democratic rights of party members and organizations will not be tolerated by party discipline. Owing to the decade of domestic turmoil and the damage done by the Lin Biao and Jiang Qing counterrevolutionary cliques, cases in which discipline has slackened, right and wrong are confused and rewards and punishments are misused can still be found to a fairly serious extent in quite a number of party organizations. This is an important expression of the unhealthy style of the party and is an important reason why the party has been unable to play its role properly. It is precisely for this reason that the report emphatically pointed out that party organizations at all levels must be mobilized to fight resolutely to uphold party discipline. In order to strictly enforce party discipline, the new party constitution devotes two chapters to party discipline and organs for discipline inspection and sets forth clear-cut provisions in both. In studying this problem, we must integrate the study of the new party constitution with actual practice and overcome erroneous tendencies in the functioning of democratic centralism and the enforcement of party discipline.

/In studying the second task, it is necessary to lay stress on gaining a clear idea of two things: 1) The significance of reforming the leading bodies and the importance of resolving the division of labor between party and government. 2) Why it is necessary to reform the cadre system and ensure that the ranks of the cadres become more revolutionary, younger in average age, better educated and professionally more competent./

In the final analysis, the reform of the system of leadership and the leading organs of the party and state is demanded by the cause of socialist modernization. The modernization program requires the service of leading bodies which are compact but vigorous, highly efficient and free from bureaucratic practices and which have clear-cut job responsibility. However, defects such as organizational overlapping, lack of clear-cut job responsibility, overstaffing, failure to separate party work from government work, "aging" of the team, and serious instances of bureaucracy are still found in our leading bodies. All this is not in keeping with the requirements of modernization. Unless we are resolved to carry out reform, we will not be able to effectively implement the party's line, principles and policies even if they are correct. Even if we have mapped out excellent plans, we will not be able to carry them out smoothly. Comrade Deng

Xiaoping once emphatically pointed out that in a certain sense, organizational reform is revolution. Whether or not this revolution is carried out will not only determine the future of modernization but will affect the destiny of the party and state. In the course of study, we must fully understand the far-reaching significance of organizational reform on the basis of integrating theory with practice and get rid of ideological obstacles in this regard.

An important part of organizational reform is to correctly solve the question of the division of labor between party and government. This question has not been properly resolved in all these years. In many localities, particularly enterprises, the party organizations often fail to separate party work from government work; instead they take everything into their own hands. They have the habit of monopolizing administrative affairs. In so doing, they do not have the time or energy for major issues which must be grasped, and thus weaken party leadership. On the other hand, because the party has taken over the functioning of the government and the government that of the enterprises, many administrative organs and production organizations cannot play their respective roles fully or independently. The normal progress of work is thus affected. Party work must be separated from government work and the party should concern itself only with party affairs. This will not only strengthen and improve party leadership but is an important guarantee for giving full play to the leadership role of administrative organs at all levels. In the course of study, we must find out what are the leadership responsibilities of the party, why it is necessary to separate party work from government work and how we should go about it. Party workers must pay attention to overcoming the erroneous idea that there will be nothing for them to do if they do not handle concrete administrative work. Comrades working in administrative departments and establishments must pay attention to guarding against the erroneous tendencies of breaking away from party leadership and refusing to carry out the party's principles and policies.

Next to the reform of the leading bodies, another important task which urgently requires tackling is to reform the cadre system and ensure that the ranks of the cadres become more revolutionary, younger in average age, better educated and more professionally competent. This is a cardinal principle for the party's work concerning cadres in the new period. At present, "aging" is quite a serious problem in the leading bodies at various levels. Many cadres do not possess the necessary cultural, scientific and technical knowledge. This is in sharp contradiction to the requirements of socialist modernization. In view of this situation, the party Central Committee set forth the timely demand that we gradually lower the average age of the ranks of the cadres and ensure that they become better educated and more professionally competent with the prerequisite of becoming more revolutionary. In order to achieve this goal, it is necessary to reform that part of the cadre system which does not suit these needs. The so-called reform of the cadre system includes the abolition of the de facto life tenure for leadership posts, the introduction of a system requiring veteran cadres to retire or withdraw to the second line, the institution and perfection of systems of job responsibility for different levels and types of cadres, together with corresponding systems governing the training of cadres in rotation, their assessment, promotion and demotion, reward and punishment and so on, as well as efforts to further improve systems governing the democratic election and appointment and dismissal of cadres. By carrying out these reforms in earnest, we will be able to promote large numbers of energetic young and middle-aged cadres, who possess both political integrity and ability, to various leading posts in good time, and provide an institutional guarantee for the succession of the new to the old. We must fully understand the importance and pressing nature of the "four reforms" in the ranks of the cadres and further eliminate erroneous ideas such as that cadres can only move up but never step down, "taking seniority as the only qualification" and discriminating against intellectuals, which have developed over the years. In his address to the 12th party congress, Comrade Chen Yun put forth an important principle for resolving the question of the succession of cadres. We must earnestly study his speech and grasp its essence. The Central Committee stipulated that in the future all cadres must take part in training in rotation. This is an important strategic measure for raising the quality of cadres. Every comrade must fully understand the far-reaching significance of this measure, guard against the unhealthy tendencies of slighting knowledge and resigning ourselves to be mere laymen and actively take part in study.

/In studying the third task, we must understand why it is necessary to establish close ties between the party and the masses in the new historical period. We must also understand the importance of strengthening the party's work among the workers, peasants and intellectuals./

Wholeheartedly serving the people, proceeding from the best interests of the broad masses of the people in everything, firmly trusting and relying on the masses and maintaining close ties with them are the fine traditions developed in our party in the course of protracted revolutionary struggles. They are important guarantees for defeating mighty enemies and overcoming difficulties to win victories. Under new historical conditions, it is of particular significance to preserve and carry forward these fine traditions. Our party's position as a political party in power determines that its activities vitally affect the interests of the masses. Only by maintaining close ties with the masses and pooling their opinions, experience and wisdom can we formulate correct principles and policies and translate these principles and policies into mass action. Estrangement from the masses can cause far greater damage now than before we came into power. Owing to the series of errors made by our party in its guidance work, particularly the mistake of the "Great Cultural Revolution," the party's ties with the masses have been weakened. Some cadres forgot all about the fine tradition of maintaining close ties with the masses and set themselves above the masses. Some even made use of their authority to encroach on the interests of the masses and do damage to the party's cause. For this reason, we must conscientiously learn from the experience and lessons of history and effectively strengthen the flesh-and-blood ties between the party and the masses in every respect. This is a question of fundamental importance in strengthening party building under new historical conditions.

Our party has always attached great importance to work among the workers, peasants and intellectuals and among the young people and women, and has accumulated rich experience in mass work. However, owing to the decade of domestic turmoil and changes in historical conditions, the party's mass work has been somewhat weakened. This is not compatible with the historical mission shouldered by the party in leading the cause of socialist modernization, and it urgently needs strengthening. The report analyzed the actual state and new characteristics of various sections of the masses. In the light of existing problems, it set forth the task and requirements of strengthening links between the party and the workers, peasants and intellectuals. It also set forth the principle of work and direction of endeavor for trade unions, the CYL, and women's federations. All comrades, particularly those directly engaged in mass work, should make an earnest effort to understand the report, sum up experience and unify their thinking in line with the spirit of the report.

/In studying the fourth task, we must correctly understand the present condition of the party and have firm faith that there will be fundamental turn for the better in the style of the party. We must also understand the significance of party consolidation and also the principle and measures involved, and actively make ideological preparation./

As the core leading the cause of socialist modernization, our party shoulders a heavy historical responsibility. Practice since the third plenary session has shown and will continue to show that our party will definitely be able to better build itself up and lead the people of the whole country in creating a new situation of socialist modernization. In view of the grave problems now existing in party style, some comrades do not have much confidence that our party can better build itself up and effect a fundamental turn for the better in its style in the next 5 years. The main reason for this kind of passive thinking is that they have not seriously analyzed the state of our party. Our party is a party which has been nurtured over the years by Marxism-Leninism-Mao Zedong Thought. It is a party which has gone through the tempering of protracted revolutionary struggles and has been reared in glorious revolutionary traditions. Our party has rallied to its ranks outstanding elements of the Chinese working classes and the Chinese people and has brought up countless heroes who fought hard and laid down their lives for the communist cause. The masses of fine Communist Party members are wholeheartedly serving the people and playing an exemplary role in production and other work. Thus, despite the serious damage inflicted by the "Great Cultural Revolution," the main body of our party remains politically pure, healthy and strong on the whole. On the other hand, it is true that impurities in ideology, style and organization still exist within the party. The dark aspects cited in the report do exist. If we do not resolutely wage a struggle against these dark aspects and let them develop unchecked instead, our party will be in danger of degeneration and we will not be able to win a victory in the cause of socialist modernization. It is precisely with this in mind that the party Central Committee has time and again emphasized that the style of a political party in power determines its very survival. From this high level of political understanding, it has led the whole party to wage an unremitting struggle against unhealthy tendencies. The staunch determination of the party Central Committee in resolving the question of party style can be seen in the formulation of the "Guiding Principles for Inner-Party Political Life," the struggle waged under its leadership to strike at grave crimes in the economic and other spheres and the decision made by the 12th party congress to carry out all-round consolidation of party organizations and rectification of party style. The majority of party members also urge that further efforts be made to straighten out the style of the party and remove the dirt from the body of our party. The determination of the party Central Committee and the vast numbers of party members constitutes an irresistible force and a fundamental guarantee for the success of party consolidation and rectification. Facts show that the style of the party has improved compared with the past few years and will continue to improve. It is groundless to doubt that we can effect a fundamental change for the better in the style of the party. It is also completely wrong to take a passive and pessimistic attitude toward the dark aspects of the party.

The 12th party congress decided on an overall rectification of party style and consolidation of party organizations, which will proceed by stages and by groups over a period of 3 years beginning from the latter half of 1982. This is an important measure for effecting a fundamental turn for the better in the style of the party and a fundamental guarantee for the persistence of the socialist road. Everyone knows that the consolidation of party organizations and rectification of party style is the successful experience gained by our party in strengthening itself. The Yanan rectification movement of 1942 enabled the whole party to achieve unprecedented unity and solidarity ideologically, politically and organizationally and laid the foundations for winning the new democratic revolution. Now we are going to carry out another party consolidation and rectification under new historical conditions. It will be no less significant than that of the Yanan rectification movement. Of course things are different now. The forthcoming party consolidation and rectification is aimed mainly at resolving the question of whether party members are qualified or not. It is true that some of our party members do not meet the requirements and cannot set an example for the masses. Some party members simply do not have communist ideals; some take advantage of their position to encroach on the interests of the masses, the collective and the state; some even take bribes, pervert justice and become overlords who ride roughshod over the masses. Through consolidating the party organizations and by adhering strictly to the new party constitution, we should expel from the party those who still fail to meet the requirements for membership after education, or ask them to withdraw from it. At the same time, party organizations at all levels and all party members should be told to strictly carry out the provisions of the new party constitution. In this way, there will be a marked change in the image of party members and cadres among the masses, the party will take on a new look in the eyes of the people of various nationalities throughout the country and the party's fighting capacity and leadership role will be greatly strengthened.

The consolidation of party organizations is a matter of primary importance in party building at present. It must be carried out step by step and in a planned way in accordance with the principle laid down by the Central Committee. In matters of organization and leadership, the consolidation will start with the leading organs and cadres and then proceed, from top to bottom, to consolidate the leading bodies at different levels and effect an improvement in the work of party organizations and the method of leadership at all levels. In the course of consolidating party organizations, it is necessary to follow the principles of "learning from past mistakes to avoid future ones and curing the sickness to save the patient" and "clarity in ideology and unity among comrades" in unfolding criticism and self-criticism. In the final stage, there will be a reregistration of all party members. Although the all-round consolidation of party organizations will not start until the latter half of next year, there are problems which ought to be tackled now, such as the consolidation of leading bodies and the combating of serious crimes in the economic field. We must attend to these problems in earnest and must not leave everything until the all-round consolidation of party organizations begins. At present, we must conscientiously study the report of the 12th party congress and the new party constitution in conjunction with the study of the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" and the "Guiding Principles for Inner-Party Political Life" and make ideological preparation for the consolidation of party organizations and the rectification of party style.

/In studying the summing-up of the report, we must lay stress on understanding the following: 1) The various fighting tasks confronting the party and the fact that we are bound to win; 2) the correct handling of difficulties; and 3) the need to forever uphold the principle of combining the universal truth of Marxism with the actual conditions in our country./

The general task set by the 12th party congress for our party in the new historical period is to unite the people of all our nationalities in working hard and self-reliantly to achieve, step by step, the modernization of industry, agriculture, national defense and science and technology and building our country into a socialist country with a high level of civilization and democracy. In accordance with the requirements of the general task and proceeding from present conditions, we must concentrate on grasping four tasks in the period to come. First, we must systematically complete organizational reform and the reform of economic systems. Second, we must go all out in building socialist spiritual civilization. Third, we must hit hard at the serious criminal activities undermining our socialist economy and socialist system. Fourth, we must rectify the party style and consolidate the party organizations. In the coming 5 years, we must effect a fundamental turn for the better in the financial and economic situation, in the standards of social conduct and in party style. In addition to the above-mentioned tasks, our party faces yet another historic task, that of working hard to achieve the sacred task of reunifying our motherland. At the same time, we must continue in our struggle to oppose imperialism and hegemonism and safeguard world peace. These are the lofty tasks of creating a new situation in all fields that lie before us. All these tasks reflect the common interests and demands of the people of all nationalities throughout the country. They accord with the desires of the people and the tide of history. Provided that we act according to the principles laid down by the 12th party congress, we will definitely be able to accomplish the abovementioned fighting tasks. Our future is that our modernization and reunification will definitely succeed.

Fulfillment of the fighting tasks set by the party is by no means easy and will not be plain sailing. We are bound to encounter all kinds of difficulties. The attitude we take toward difficulties has an important bearing on whether or not we can accomplish the party's tasks. If we overlook the difficulties, overestimate our subjective will and power and act blindly and rashly, we are bound to run up against a brick wall. If we see nothing but difficulties, lose faith in the strength of the party and the masses and waver and procrastinate, we will accomplish nothing. The correct attitude should be to go among the masses and dig into actual work, forge ahead in the struggle with added vigor and fight indomitably and indefatigably. In the course of study, we must take a correct attitude toward work tasks and difficulties and ponder over the question of how to better accomplish the tasks given us by the party in the light of our actual thinking and work.

We must integrate the universal truth of Marxism with China's actual conditions, follow our own road and build socialism with distinctly Chinese features. This is a basic conclusion drawn by our party after summing up historical experience over the years. In order to achieve this integration, we must promptly and correctly unfold the struggle between the two lines, oppose "left" and right tendencies wherever they appear and guard against and overcome all erroneous tendencies which deviate from the correct path. We must conscientiously study Marxism-Leninism-Mao Zedong Thought and use the overall view of materialist dialectics to overcome the one-sided metaphysical approach of jumping from one extreme to another and shifting from one tendency to another. If comrades of the whole party can persevere in learning from the stand, viewpoint and method of Marxism, persist in going deep into the realities of life to conduct investigation and study and correctly implement the line, principles and policies of the party, the fighting tasks set by our party will definitely be fulfilled.

HOW CAN WE SAY THAT IT IS POSSIBLE TO QUADRUPLE INDUSTRIAL AND AGRICULTURAL PRODUCTION VALUE BY THE END OF THIS CENTURY?

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 46-47

[Article by Zhao Qi [0340 0366]]

[Text] In his report to the 12th CPC National Congress, Hu Haobang said that the target for which our economic construction should struggle from 1981 until the end of the century is to quadruple industrial and agricultural production value on the premise of constantly improving economic efficiency. Such a glorious target will encourage the people and is perfectly feasible. Some comrades feel that such a target is similar to those of 1958 and 1978--totally divorced from reality--and they are doubtful of being able to realize it. How then should we look at this question?

1. We should look at it in terms of historical conditions. In 1958 and 1978 economic construction was not in fact taken as the nucleus of the party's work, nor were the relations between politics and economics correctly handled and positioned. At that time appreciation and understanding of the rules of socialist construction was not very great, while economic construction quotas manifested a good deal of subjective arbitrariness. The situation today is completely different. After the third plenary session of the party the focal point of the party's work was transferred to socialist modernized construction. With a guiding ideology we completed the restoration of order out of chaos, corrected the longstanding "leftist" mistakes that had been hindering economic development and, on the basis of summing up all our positive and negative experiences, we created a correct party line with correct policies and direction. The party's appreciation and understanding of the rules of socialist construction increased greatly in comparison to before, while all-round experience grew as well and consciousness and support of the implementation of correct party policies and plans also improved enormously. Economic construction was carried out under the collective guidance and leadership of the party Central Committee while major policies and tactical targets which embodied the collective wisdom of the entire party were thoroughly examined and investigated before release.

2. We should look in terms of the content of the targets. The quadrupling mentioned in the 12th national congress is a target with overall balance

unlike those previous ones which displayed ignorance of the rules of proportional development and the need for overall balance. Quadrupling takes the raising of economic efficiency as its premise and not only demands that both efficiency and speed unite together but, at the same time, it ensures further state construction and improvements in people's living standards. Such a target is comparably better than past ones which one-sidedly strove for quantity and production value, ignoring the targets of quality, efficiency and benefit.

3. We should look at the question in terms of the possibility of realizing the target. In the past, high targets were unrealizable because they were so divorced from reality. The quadrupling laid out in the 12th national congress is based on objective studies. During the years from 1953 to 1981, despite the 10 years of social disorder and destruction and mistaken guidance in economic work, there was still an annual average rise in industrial and agricultural production value of 8.1 percent. To reach quadrupling, we only need a continued average annual increase of 7.2 percent. Why is it that what we were able to do in the past is not possible today? Of course, we should remember that the base figures we start with today are much higher than those in 1953 and the absolute figures included in every 1 percent increase today are much more, thus making things that much more difficult. Nevertheless, we should remember that present favorable conditions are much more numerous than in the past. In addition to the favorable conditions of politics and ideology mentioned above, the 30 years of socialist construction that we have experienced have provided us with a very good foundation of material technology and we have already established an independent and relatively complete industrial system and system of national economy. In 1980, industrial production value represented 69.9 percent of total industrial and agricultural production value as compared with 43.1 percent in 1952. The number of industrial enterprises expanded to a figure of 370,000 with a wide range of differing fields, and as the overall arrangement of industry grew constantly better, some important industrial products leapt into a world ranking position. Conditions in agricultural production also saw definite improvements. We gained a batch of management personnel and technicians who have made remarkable achievements, in the areas of science and technology. In 1981 all of China's work units working under the system of ownership by the people possessed a total of 5,714,000 natural scientists and technologists, an increase of over 12 times the figure for 1952. Such are the favorable conditions we have for achieving a quadrupling of production value in industry and agriculture by 2000.

It should be remembered that the development potential of China's national economy is still enormous and some present important targets which reflect economic benefits are not only lower than those of economically developed countries but they are also lower than some of the best economic levels reached in China in the past. If we inspire enthusiasm in every area and trust in governmental policies and the fact that technological improvements and advances will be able to unearth the enormous potential in enterprises, then we will be able to greatly increase economic benefits and speed up construction with little or no increases in equipment, raw materials, energy or manpower.

Some comrades pointed out that in 1981, industrial and agricultural production value only grew 4.5 percent over the previous year and that other figures in recent years are not much higher. Therefore, these comrades question whether quadrupling is actually a feasible target to set ourselves. We should not take an isolated and static point of view to examine this question. Over a 20-year period, the annual average increase stands at 7.2 percent, but this does not imply that we want to reach this figure immediately. We are saying that is to be seen as an average. During these 20 years, the first 10 displayed an annual average increase of less than 7 percent, while the final 10 years had increases of more than 8 percent. In this way, we will be able to achieve quadrupling by the end of this century.

Speed of development during the first 10 years will not be very great, and the reason is that the backward situation concerning energy and communications, which are restricting the development of China's economy, needs a long period of time before it may see any improvement. Because of a lack of funds and scientific personnel, original key technology projects and improvements in enterprise technology have so far only been carried out in only the most important areas and schemes have not expanded into wider spheres. The development of science and technology, training of technical personnel, etc., also all involve specific processes. Over a long period in the past, imbalances in the national economy and irrationalities in product structure, enterprise organizational structure and the economic management system that existed all required the expenditure of a great deal of time and energy for readjustment and restructuring. The 12th CPC National Congress suggested tactical deployment split into two main parts and drew up a series of measures and important principles designed to solve problems which will arise during the first 10 years.

After the first 10 years of readjustment the national economy will have sorted out the relations between all feasible areas and the delayed aftereffect will be enormous, resulting in the last 10 years' development speed far surpassing that of the 1980's. This is because:

1. In the second 10-year period readjustments to the economic structure, including interenterprise and internal enterprise readjustments, will have been to a large extent completed. The economic management system will also have reached an essential rationale and enterprise management and administration will by that time be on the right track, meaning that socialist spiritual civilization will be able to achieve even greater results and the enthusiasm of every region, every enterprise and all the workers will have been activated to even greater extents. As a result of these factors, today's enterprise will greatly increase production power and raise quantity and quality at the same time it moves toward raising economic benefits and efficiency to these future levels.

2. There will be large-scale increases in energy in the last 10-year period. As technology progresses and develops there will be huge decreases in energy consumption. At present, China's use of energy is not very efficient but the potential for economizing is enormous. Annual consumption of

standard coal in China is about the same as in Japan, but our production value as a result of such consumption is about one-fourth that of Japan. Of course there are some factors which make the situation not so easily comparable, for example the make-up of energy supplies differs, so does the make-up of our products. But according to projected statistics, if by the end of this century the production technology of the most important sectors of China's industries is able to reach the level of present-day economically developed countries, then product-producing enterprises and work units will be able to cut their consumption to half of the present amounts, and for every 1 percent increase in production value there will be only an 0.5 percent increase in energy consumption. This is of extreme significance to the elevation of industrial production value.

3. As science and technology develop, the accuracy and precision of workmanship of products will increase as well, thus products will rise in quality and increase in variety, and all this will in turn increase the value of the products. The present utilization ratio of China's crude oil is very low and it should be remembered that economically advanced countries, by processing crude oil into petroleum product, are able to increase prices 10 times and an additional 10 times when further processing produces end products with petroleum bases. In other words petroleum-based end products have a value 100 times that of crude oil. Obviously our potential in this area is enormous. The same quantity of raw material at that time will be able to produce twice as much as, or several times as much as or even several times 10 as much production value as now. Thus quadrupling does not by any means demand quadrupling of all products in terms of quantity. Some products, such as oil, need only be doubled in production value while the end products processed from the oil will produce production values far in excess of any quadrupling.

4. Some newly established areas of industry such as electronics, nuclear energy, oil refining, etc., will all see much faster development during the second 10 years, and this will bring about large-scale increases in quantity as well as production value increases.

The few topics discussed above are all intimately linked with the development of technology. It would be impossible to bring about this quadrupling by using old equipment, old technology, old raw materials and old products. What is of utmost importance is our reliance on the development of science and technology. Today, China's industrial production technology is similar to that of economically advanced countries during the end of the 1950's and early 1960's. Today's science and technology in these economically advanced countries have made their most significant advances only in the last 20 years or so. So starting from now we must use the next 20 years to overtake levels that economically developed countries achieved in the last 20 years in certain areas. Not only is this possible but it is something we should achieve, and to look at the situation in this way provides us with the means to achieve the quadrupling of the industrial and agricultural production value.

WHY IS IT THAT PEASANT INCOMES SHOULD NO LONGER BE INCREASED MAINLY BY RAISING THE PRICES OF AGRICULTURAL PRODUCTS?

Beijing RED FLAG in Chinese No 21, 1 Nov 82 pp 47-48

[Article by Xu Ke [6079 2688]]

[Text] With the exception of low production areas and regions that have suffered natural disasters, the last few years have seen general increases in peasants' incomes with obvious improvements in standards of living. The reasons for the relatively fast increases in peasants' incomes, apart from increases in production, are mainly because since 1979 the state has been increasing the selling prices of grain and other agricultural products on a fairly large scale. During the 28-year period from 1950 to 1978 the price of agricultural products rose by 117.4 percent, an average annual increase of 2.8 percent. In the 3 years from 1979 to 1981 prices of agricultural products rose by 38.5 percent, showing an average annual increase of 11.5 percent. In 1981, sales of agricultural products far surpassed income for 1978, reaching 19,800 million yuan, mainly because of increases in brand prices and an extension to the spheres of negotiated prices and the limits of surplus prices. Thus the 1981 income averaged out to 34 yuan for every peasant. All this was very beneficial to promoting the development of agriculture, improving the standards of living of the peasants and activating the peasants' enthusiasm. From a long-term point of view, it is still possible to carry out readjustments in the price parities between industrial and agricultural products but in the future lengthy period of peasant income increases we can no longer rely only on raising the prices of agricultural products, nor can we rely on decreases in requisition by purchase or increases in the scale of negotiated prices. Why is this?

We know that no matter whether we raise the prices of agricultural products to the limits of negotiated prices, at the same time that state purchases of agricultural products rise, expenditure will also necessarily increase. In other words, whereas before the state relied on agricultural commodity exchange to ensure stable prices, from which the peasants received a portion of their income, now it relies on raising prices and this increase again is returned to the peasant. At present China is in the process of carrying out readjustments and therefore needs concentrated funds for essential construction work. Most of these funds come from taxes and the profits of state-run enterprises handed over to the state. However, it is also necessary that the peasants furbish a portion of this accumulation. If there is no relatively large-scale increase in the labor production rate within an industry and we continue to raise the prices of agricultural products and enlarge the limits of negotiated prices and drop the amount of requisition by purchase, then the concentrated funds from the peasants will be reduced by the state, thereby affecting modernized construction. This is not in keeping with the essential benefits of the people of the entire country, including the peasants.

In terms of the present state of the country's finances we cannot permit continued price increases of agricultural products. Our country's economy is at present in the middle of readjustment and annual increases in national income are not large. In terms of the financial management system, expansion of regional and enterprise financial autocracy has meant less profits received by the state from enterprises in the last few years. This has resulted in continued decreases in national revenue. Furthermore, government expenditure has shot up in some areas. As far as government subsidies on essential items and some agricultural products are concerned, the 1978 figures stood at 7,800 million yuan, while after some prices of agricultural products had been raised in 1979, the figure in 1981 reached 32,000 million yuan, representing 30 percent of the year's financial revenue. If the selling price of agricultural by-products remains stable but the purchasing prices of agricultural products continue to rise then state finances used to subsidize these prices will also continue to rise and with no large-scale increases in state revenue, the state financial department will find it extremely hard going.

The extremely fast increases in consumer funds do not suggest that increases in agricultural products purchasing prices are a good idea either. In recent years, the incomes of the people both in cities and in the countryside have improved considerably while standards of living have also improved to varying degrees. Nevertheless, we must appreciate that these improvements in the standards of living in urban areas and the countryside have taken place despite the lack of large-scale increases in state revenues. During the Cultural Revolution our handling of the relations between economic construction and the people's livelihood was not good, with accumulation rates reaching levels which were too high, thereby putting pressure on consumption by the people. In order to change this situation the state has been lowering the accumulation rate over the last few years and using nearly all of the new increases in state revenue to improve the standards of living of the people. Such actions as these are only feasible on a short-term and limited time scale. Accumulation is the very source and wellspring of extended reproduction and without accumulation it would be difficult for production to develop, and thus the standards of living of the people, both in urban areas and in the countryside, would not improve. In order to achieve "food" and "construction" we can no longer rely on reducing accumulation funds. As from today standards of living will continue to improve but increases in workers' average wages should be kept on a par with rises in labor production rates. Increase in peasants' incomes should for the most part depend on the development of production, the lowering of production costs and improvements in labor production rates.

HOW SHOULD WE UNDERSTAND THE NOTION THAT THE SOCIALIST CHARACTER OF SPIRITUAL CIVILIZATION IS DECIDED BY IDEOLOGICAL EDUCATION?

Beijing RED FLAG in Chinese No 21, 1 Nov 82 p 48

[Article by Wu Hong [0702 4540]]

[Text] The establishment of socialist spiritual civilization includes the establishment of both culture and ideology. The establishment of culture provides the foundations of culture and knowledge necessary for ideological construction. In a socialist system, raising the levels of development of education, science, culture, etc. benefits greatly the elevation of ideological consciousness and socialist morality and plays an important role in helping to study and grasp the theories of Marxism, as well as the reception of communist education. However, the socialist character of spiritual civilization is by no means decided by the scale and level of development of cultural construction, but is instead decided by ideological construction.

The contents of ideological construction guide the developmental direction and developmental extent of society's political ideology and moral thinking. The ideological construction mentioned in the move toward the establishment of socialist spiritual civilization during the 12th CPC National Congress includes six main areas and all in all the most important are revolutionary ideals, morality and discipline. Here, then, the teaching of communist ideology becomes the nucleus for ideological construction and cultural construction must develop under the direction of communist ideology. This is an innate characteristic of socialist spiritual civilization and it is the essential trait that separates socialist spiritual civilization from other kinds of social spiritual civilization. Socialism is the first stage to communism and not only should the productive forces have reached a fairly well-developed level but the people should also have fairly high ideological consciousness and morality. The limitless development of the people's consciousness is one of the most important things that separates socialism from capitalism. Although material production in highly developed capitalist countries is well developed, at the same time one still finds widespread decadence, corruption and degeneracy within social and spiritual life in such countries. In China, the most important part of ideological construction is to teach people to establish communist ideals and morals and mold these into their world views. In addition, it is important to teach people to make the realization of socialist modernization their own personal task and to encourage them not to fear hardship, nor death, to think of people in general and not of themselves and to stress selflessness as well as a total spiritual and physical commitment to serving the people and thereby strengthening organization and discipline. Communist ideology as the nucleus of ideological construction plays an important role in the construction of socialist spiritual civilization and also decides the socialist character of the spiritual civilization.

Socialist ideological construction corresponds exactly to the socialist systems of economy and politics. The socialist society has eradicated exploiters and cases of suppression by making the public ownership of the means of production the replacement of private ownership and taking this as the economic foundation of socialist ideological construction. Upon this foundation, the common ideals and aims of the workers are formed, as well as the common moral principles and standards of behavior. Furthermore, from this basis the mutual unification, assistance and love between people, which represent new social relations, establish and develop themselves. An economic system with socialist public ownership requires that the workers display collective ideology and establish an attitude of being masters of their world. Furthermore, the state power of the people's democratic dictatorship provides important conditions for the development of socialist ideological construction, the strengthening of communist education and the eradication of the influences of bourgeois thinking. In a capitalist system of exploitation the relations between people are undisguised relations of gain and loss, cold-hearted relations of "monetary exchange." Corresponding to this, the system of bourgeois ideology advocates such selfish concepts as "everyone for himself." Such attitudes not only point to exploitation, but also to suppression and cheating. Because socialism and capitalism are not the same, the developmental directions and the nature of their social political ideology and ideals and morals are not the same either and thus the spiritual appearance of the people differs too. This fully illustrates that the socialist character of a spiritual civilization is decided by the socialist system and its corresponding ideological construction.

A DISCUSSION ON 'RULE BY INACTION'--THOUGHTS ON READING LAO ZI, NOT A STUDY OF HIS PHILOSOPHIC THEORY

Beijing RED FLAG in Chinese No 21, 1 Nov 82 inside back cover

[Article by Li Ming [2621 2494]]

[Text] Lu Xun termed Lao Zi's principle of "do nothing and nothing will be left undone" as the "inflated words of a disciple" and "high-sounding but impractical." He ridiculed Lao Zi as one "whose heart reached to the skies but whose life was as thin as paper," really hitting the nail on the head.

The intention of this early philosopher was to abolish "government action." Lao Zi's political view of "inaction" had considerable influence on certain people, an influence reflected in society to this day. Of course, today things are much more complicated than they were in ancient times and cannot be treated in the same way. But comparing the past with the present, it would not be wrong to say that there still exist the "inflated words of a disciple." On the surface, governing by "inaction" would seem to imply a situation in which nothing is forbidden. But in fact it does not mean that nothing be controlled or that we can do whatever we like. This has been proven in the passage in the 5,000 characters which defines a "small country with few people" in which "sages and wisdom have been abandoned." "If you practice inaction, nothing will not be governed." This phrase appears to advocate "inaction" but in fact contemplates "action." Can we not say that this view is a Lao Zi-type advocation of "action"? It is often the case in the world that if one person doesn't do something, someone else will. Otherwise, what is the purpose of taking so much trouble to write so many words? Absolute "inaction" means keeping quiet and not saying a single word.

It is not wrong to let things take their own course; arbitrary "action" doesn't easily produce success. But it is not a good idea to think like Zhong Gongbao and suggest such a policy for "governing a country." Since we may choke while eating, slip when walking, should we simply sit down without moving, and not eat or walk so as not to choke or slip? If all this was really put into practice, I'm afraid it would not only fail to bring an end to war but would also cause people a lot of trouble. The idea of confining people in their own small universe where each enjoys "himself" and everyone lives a free and happy life is only an illusion, because such a view denies the freedom of a whole society to make progress. Would people be willing to work in such a situation? Wouldn't they rise in rebellion?

"Those who understand me are few; those who follow me are precious." Luckily, this old philosopher knew himself, and did not insist on popularizing this view. It was proper for him to go west to Hangu and "finally tread the shifting sands." Sima Qian said that he lived for 160 years, or perhaps more than 200 years. The philosopher also said that the little chief responsible for guarding the Hangu Pass worshipped his philosophy and consequently went along with the old man. Whether true or not, this saying survives.

Historical facts prove that those in the position of governing a country who really understood public feeling were always those who were intelligent and paid attention to reality. For example, in the early days of the famous Han dynasty, when "the monarch and his subjects only wanted to rest and do nothing"; though they "respected knowledge," their thinking was not stagnant. What they "respected" was its spirit. How could it be said that these ministers arbitrarily followed political blueprints, that everyone from the top to the grassroots levels was "resting" and sleeping and practiced "inaction" to the extent that they had not a single active plan for governing the country? There were a number of useful measures conforming to natural conditions, such as "encouraging agriculture," "abolishing exorbitant taxes and levies" and selecting and promoting talents. It was said that "Cao Shen followed the rules and regulations defined by Xiao He." Liu Bang defined 3-part laws after he entered Shanhaiguan. Later, Xiao He studied the laws defined by the Qin dynasty and worked out "9-part laws" to replace the "3-part laws"; it was not easy to define the later laws because they covered much wider aspects. Without laws and rules and regulations, it would not be possible for Xiao He to remain prime minister, nor would it have been possible for Cao Shen, should he want, to become an "idle" and "mediocre minister."

It is a natural historical development to positively "act" according to nature. To do nothing and let things take their own course and become "disciples who talk empty words" may be all right; but in this situation, it will be difficult to "govern a country in peace." Is it really accidental that the globe did not turn around according to the desires of those who advocated ruling the country by "inaction"? Otherwise, would it not be difficult for later generations to write books of theories, summing up the development of the civilization of China over the past 2,000 years and more? Historians and historians of philosophy have criticized the political view of "inaction" as "contrary to history" and "contrary to development" and held that this ideology is far more reactionary than the restorationism of Confucianism, and all the criticisms are basically in agreement.

From a historical point of view, Lao Zi's political ideology of "inaction" was aimed at seeking a way out for the society of his time; it had its own reasons and historical conditions for its emergence. We can in no way put demands on the people of ancient times with today's knowledge and arbitrarily regard them as ignorant and presumptuous; if we do so, we will find it hard to avoid becoming nihilistic. After all, Lao Zi was a wise and great ideologist of ancient times. He acknowledged the contradictions in society at that time and tried to solve them. His valuable philosophical theory represents the ideological level of an era and it has been explained by a great number of people of ancient and present times who have spared no efforts to explain and study the books written by Lao Zi. It is natural to inherit this fine cultural heritage with a critical attitude. But we cannot mechanically compare the past with the present. If we take Lao Zi's view of "inaction" as a yardstick to measure our present era, we will no doubt go against history.

PARTY ORGANIZATION AND PARTY LITERATURE

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 2-4

[Article by V. I. Lenin; passages within slantlines published in boldface]

[Text] The new conditions for social-democratic work in Russia which have arisen since the October Revolution have brought the question of party literature to the fore. The distinction between the illegal and the legal press, that melancholy heritage of the epoch of feudal, autocratic Russia, is beginning to disappear. It is not yet dead, by a long way. The hypocritical government of our prime minister is still running amuck, so much so that IZVESTIA SOVETA RABOCHIKH DEPUTATOV is printed "illegally"; but apart from bringing disgrace on the government, apart from striking further moral blows at it, nothing comes of the stupid attempts to "prohibit" that which the government is powerless to thwart.

So long as there was a distinction between the illegal and the legal press, the question of the party and nonparty press was decided extremely simply and in an extremely false and abnormal way. The entire illegal press was a party press, being published by organizations and run by groups which in one way or another were linked with groups of practical party workers. The entire legal press was nonparty--since parties were banned--but it "gravitated" toward one party or another. Unnatural alliances, strange "bedfellows" and false cover-devices were inevitable. The forced reserve of those who wished to express party views merged with the immature thinking or mental cowardice of those who had not risen to these views and who were not, in effect, party people.

An accursed period of Aesopian language, literary bondage, slavish speech, and ideological serfdom! The proletariat has put an end to this foul atmosphere which stifled everything living and fresh in Russia. But so far the proletariat has won only half freedom for Russia.

The revolution is not yet completed. While tsarism is /no longer/ strong enough to defeat the revolution, the revolution is /not yet/ strong enough to defeat tsarism. And we are living in times when everywhere and in everything there operates this unnatural combination of open, forthright, direct and consistent party spirit with an underground, covert, "diplomatic" and dodgy "legality." This unnatural combination makes itself felt even in our newspaper: for all Mr Guchkov's witticisms about social-democratic tyranny forbidding the publication of moderate liberal-bourgeois newspapers, the fact remains that PROLETARY, the central organ of the Russian Social-Democratic Labor Party, still remains outside the locked doors of /autocratic/, police-ridden Russia.

Be that as it may, the half-way revolution compels all of us to set to work at once organizing the whole thing on new lines. Today literature, even that published "legally," can be nine-tenths party literature. It must become party literature. In contradistinction to bourgeois customs, to the profit-making, commercialized bourgeois press, to bourgeois literary careerism and individualism, "aristocratic anarchism" and drive for profit, the socialist proletariat must put forward the principle of /party literature/, must develop this principle and put it into practice as fully and completely as possible.

What is this principle of party literature? It is not simply that, for the socialist proletariat, literature cannot be a means of enriching individuals or groups: it cannot, in fact, be an individual undertaking, independent of the common cause of the proletariat. Down with non-partisan writers! Down with literary supermen! Literature must become /part/ of the common cause of the proletariat, "a cog and a screw" of one single great social-democratic mechanism set in motion by the entire politically conscious vanguard of the entire working class. Literature must become a component of organized, planned and integrated Social-Democratic Party work.

"All comparisons are lame," says a German proverb. So is my comparison of literature with a cog, of a living movement with a mechanism. And I daresay there will ever be hysterical intellectuals to raise a howl about such a comparison, which degrades, deadens, "bureaucratizes" the free battle of ideas, freedom of criticism, freedom of literary creation, etc., etc. Such outcries, in point of fact, would be nothing more than an expression of bourgeois-intellectual individualism. There is no question that literature is least of all subject to mechanical adjustment or leveling, to the rule of the majority over the minority. There is no question, either, that in this field greater scope must undoubtedly be allowed for personal initiative, individual inclination, thought and fantasy, form and content. All this is undeniable; but all this simply shows that the literary side of the proletarian party cause cannot be mechanically identified with its other sides. This, however, does not in the least refute the proposition, alien and strange to the bourgeoisie and bourgeois democracy, that literature must by all means and necessarily become an element of Social-Democratic Party work, inseparably bound up with the other elements. Newspapers must become the organs of the various party organizations, and their writers must by all means become members of these organizations. Publishing and distributing centers, bookshops and reading rooms, libraries and similar establishments--must all be under party control. The organized socialist proletariat must keep an eye on all this work, supervise it in its entirety, and, from beginning to end, without any exception, infuse into it the life-stream of the living proletarian cause, thereby cutting the ground from under the old, semi-Oblomov, semi-shopkeeper Russian principle: the writer does the writing, the reader does the reading.

We are not suggesting, of course, that this transformation of literary work, which has been defiled by the Asiatic censorship and the European bourgeoisie, can be accomplished all at once. Far be it from us to advocate any kind of standardized system, or a solution by means of a few decrees. Cut-and-dried schemes are least of all applicable here. What is needed is that the whole of our party, and the entire politically conscious social-democratic proletariat throughout Russia, should become aware of this new problem, specify it clearly and everywhere set about solving it. Emerging from the captivity of the feudal censorship, we have no desire to become, and shall not become, prisoners of bourgeois-shopkeeper literary relations. We want to establish, and we shall establish, a free press, free not simply from the police, but also from capital, from careerism, and what is more, free from bourgeois-anarchist individualism.

These last words may sound paradoxical, or an affront to the reader. What! some intellectual, an ardent champion of liberty, may shout. What, you want to impose collective control on such a delicate, individual matter as literary work! You want workmen to decide questions of science, philosophy, or aesthetics by a majority of votes! You deny the absolute freedom of absolutely individual ideological work!

Calm yourselves, gentlemen! First of all, we are discussing party literature and its subordination to party control. Everyone is free to write and say whatever he likes, without any restrictions. But every voluntary association (including a party) is also free to expel members who use the name of the party to advocate antiparty views. Freedom of speech and the press must be complete. But then freedom of association must be complete too. I am bound to accord you, in the name of free speech, the full right to shout, lie and write to your heart's content. But you are bound to grant me, in the name of freedom of association, the right to enter into, or withdraw from, association with people advocating this or that view. The party is a voluntary association, which would inevitably break up, first ideologically and then physically, if it did not cleanse itself of people advocating antiparty views. And to define the borderline between party and antiparty there is the party program, the party's resolutions on tactics and its rules and, lastly, the entire experience of international social-democracy, the voluntary international associations of the proletariat, which has constantly brought into its parties individual elements and trends not fully consistent, not completely Marxist and not altogether correct and which, on the other hand, has constantly conducted periodical "cleansings" of its ranks. So it will be with us too, supporters of bourgeois "freedom of criticism," /within/ the party. We are now becoming a mass party all at once, changing abruptly to an open organization, and it is inevitable that we shall be joined by many who are inconsistent (from the Marxist standpoint), perhaps we shall be joined even by some

Christian elements, and even by some mystics. We have sound stomachs and we are rock-like Marxists. We shall digest these inconsistent elements. Freedom of thought and freedom of criticism within the party will never make us forget about the freedom of organizing people into those voluntary associations known as parties.

Secondly, we must say to you bourgeois individualists that your talk about absolute freedom is sheer hypocrisy. There can be no real and effective "freedom" in a society based on the power of money, in a society in which the masses of working people live in poverty and the handful of rich live like parasites. Are you free in relation to your bourgeois publisher, Mr Writer, in relation to your bourgeois public, which demands that you provide it with pornography in frames [novels] and paintings, and prostitution as a "supplement" to "sacred" scenic art? This absolute freedom is a bourgeois or an anarchist phrase (since, as a world outlook, anarchism is bourgeois philosophy turned inside out). One cannot live in society and be free from society. The freedom of the bourgeois writer, artist or actress is simply masked (or hypocritically masked) dependence on the money-bag, on corruption, on prostitution.

And we socialists expose this hypocrisy and rip off the false labels, not in order to arrive at a nonclass literature and art (that will be possible only in a socialist extra-class society), but to contrast this hypocritically free literature, which is in reality linked to the bourgeoisie, with a really free one that will be /openly/ linked to the proletariat.

It will be a free literature, because the idea of socialism and sympathy with the working people, and not greed or careerism, will bring ever new forces to its ranks. It will be a free literature, because it will serve, not some satiated heroine, not the bored "upper ten thousand" suffering from fatty degeneration, but the millions and tens of millions of working people--the flower of the country, its strength and its future. It will be a free literature, enriching the last word in the revolutionary thought of mankind with the experience and living work of the socialist proletariat, bringing about permanent interaction between the experience of the past (scientific socialism, the completion of the development of socialism from its primitive, utopian forms) and the experience of the present (the present struggle of the worker comrades).

To work, then, comrades! We are faced with a new and difficult task. But it is a noble and grateful one--to organize a broad, multiform and varied literature inseparably linked with the social-democratic working-class movement. All social-democratic literature must become party literature. Every newspaper, journal, publishing house, etc., must immediately set about reorganizing its work, leading up to a situation in which it will, in one form or another, be integrated into one party organization or another. Only then will "social-democratic" literature really become worthy of that name, only then will it be able to fulfill its duty and, even within the framework of bourgeois society, break out of bourgeois slavery and merge with the movement of the really advanced and thoroughly revolutionary class.

WHY IS IT NECESSARY TO MODIFY THE CHINESE VERSION OF 'PARTY ORGANIZATION AND PARTY LITERATURE'?

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 5-8

[Article by office for editing and translating Lenin's and Stalin's works of the editorial and translation bureau of the CPC Central Committee]

[Text] There are not many words in the article written by Lenin more than 70 years ago but the influence of the article is very great. Starting from the 1930's, there have been many translations of the article in China. Some have even been included in various versions of special collections of articles on literature and art by the classical writers. However, there are many inaccuracies in some of the crucial places in all the Chinese translations, including the translation by our own bureau. Misunderstandings have been caused. For example, the expression "partiinaya literatura" (the second word comprises literature, documents and publications, but what is meant here is newspapers, periodicals and books). This phrase is translated as "party literature" in all the existing Chinese translations. Such a phrasing could easily give people the erroneous understanding that the cultural and social phenomenon of literature is merely an accessory of the party. Thus, we think it is necessary to check the translation again and correct the mistranslations. In addition, we make a brief explanation of the background against which the article was written, the central features of the article and our translation.

Lenin's article "Party Organization and Party Literature" was written in November 1905 at the climax of the first Russian bourgeois democratic revolution. The people's revolution which was started at the beginning of 1905 reached its climax in the autumn. The political strike throughout Russia in October was an augury of the coming of the revolutionary storm, the people's armed uprising was imminent. Scared by the surging tide of revolution, the czarist government was forced to promulgate a "manifesto" on 17 October. The people were promised certain civil rights and political freedom and that the legislative Duma (parliament) would be called. While the situation of the revolution was rapidly developing at a tremendous pace, Lenin returned to St Petersburg from outside on 8 November to be in direct charge of the work of the CPSU Central Committee. He directed the whole party to comprehensively and profoundly arouse and organize the masses, increasingly promote the consciousness of the democratic force which had the proletariat and the peasants as its mainstay and make preparations in various aspects for the armed uprising. Lenin held that: In order to strengthen the party's leadership in the revolutionary movement, the party's organization work, propaganda work and agitation work must be reorganized to meet the demands of the new situation. No sooner had he returned to Russia than he published the series of such articles as "Party Organization and Party Literature," "The Proletariat and the Peasantry," "The Armed Forces and the Revolution," "Learn From the Enemy," "Revolutionary Office Routine and Revolutionary Action," "The Dying Autocracy and New Organs of Popular Rule," "The Socialist Party and the Nonparty Revolutionism" and "Socialism and Religion" and so on in NOVAYA ZHIZN, the first legal Bolshevik official newspaper. "Party Organization and Party Literature" was one among these articles written at that time. The content of these articles principally analyzed the situation of revolution and the political tendency of the various social forces, expounded the new task of struggle for the Russian proletariat and proposed a new form of work for the Russian Social Democratic and Labor Party [RSDLP].

Before returning to his country, Lenin pointed out in his letter to the RSDLP Central Committee that: Since the situation of revolution develops rapidly, "the time is past for ideological leadership through 'whispering' in secret meeting places and rendezvous with agents! Leadership should be through political literature" (literatura, which here means publications). ("Collected Works of Lenin," Vol 34, p 348) In the past, there was not freedom of speech and freedom of the press in Russia. It was impossible for the party to exercise its ideological leadership through the party's publications. Now, there was this possibility. However, in order to make the party's legal newspaper become the party's publication in reality as well as in name and be able to shoulder the important task of ideological leadership, it was necessary to carry out the necessary reforms in written propaganda work. Lenin's "Party Organization and Party Literature" was written to solve this problem.

In this article, Lenin analyzes the situation in the country and the situation of the party's propaganda through the newspapers and periodicals, proposes the party's principle of publication, discusses the position that the party's written propaganda occupies in the party's cause and the characteristics by which it differs from other work of the party and makes it clear that the relationship between the party and its propaganda organs (the newspapers, periodicals, the publishing houses and the publication departments and so on) is the relationship between the party, the sympathizers of the party and the party members who contribute articles to the party's publications. Lenin makes a penetrating analysis of the characteristics of a writing career. He points out that: "There is no question, either, that in this field greater scope must undoubtedly be allowed for personal initiative, individual inclination, thought and fantasy, form and content." It is least of all subject to mechanical adjustment or leveling, to the rule of the majority over the minority and formulism. In addition, he emphatically criticizes the bourgeois anarchic and individualistic tendencies which attempted to shake off the party's leadership and supervision under the disguise of "absolute freedom of thought and creation."

Lenin repeatedly emphasized that the social democratic publications should become the party's publications and elaborated on the party's principle of publication. Lenin held that: The written propaganda work should become a component of the party's cause; the party's newspapers, magazines and other publications should propagate the party's views with a clear-cut stand. The writers who contribute articles to the party's publications, in particular the party member writers, should maintain unity with the party's views. It is absolutely forbidden to discard the party's views. In order to ensure the enforcement of the above principles, Lenin demanded that party member writers join one of the party organizations. Party organizations were to adopt measures to handle party members who violated this principle or propagated views against the party until they were expelled from the party. Propaganda organs such as newspapers, magazines and publishing houses were to be subject to the party's supervision, report their work to the party and appeal to the workers, the party members and the masses to pay close attention to and supervise this aspect of their work. These views are the central theme and principal features of Lenin's article.

Lenin emphasized the problem of the party character of the publications and the party member writers. This was closely related to the historical stage in which the Russian revolution was to be found at that time, the contemporary social environment and the struggle inside the Russian Social Democratic Party. The 1905 Russian revolution was a bourgeois democratic revolution. The revolution had an extensive social base. In addition to a handful of royalists, there were all kinds of social forces which took part in, supported or sympathized with the revolution. Thus, it seemed that the revolution was a revolution "of the whole people." In order to conceal its interests and purposes, the bourgeoisie spared no effort to disguise itself as the political representative "of the whole people." In addition, the bourgeoisie propagated the supra-class and supra-party "nonparty" ideology and advicated bourgeois anarchic and individualistic ideas such as "absolute freedom of creation" and "freedom of criticism" and so on.

The proletariat and its party took part in the revolution to achieve the party's minimum program. This was of course to pave the way for the development of capitalism, but this was not its purpose. The proletariat took part in the bourgeois democratic revolution in order to thoroughly overthrow the feudal autocratic system, eliminate the remnants of serfdom and create conditions for overthrowing the bourgeoisie in the next step and realizing the socialist revolution. Thus, the proletariat had to maintain its political independence in the bourgeois democratic revolution, the proletarian party had to adhere to a clear-cut party character, criticize the "nonparty" ideology and resist the corrosion of anarchism and individualism.

The above bourgeois ideology was influential inside the RSDLP. At that time, the Mensheviks were a part of the party in form, though politically, they tagged behind the bourgeoisie. In the ideological aspect, they had completely abandoned the struggle against the influence of the bourgeoisie and did not supervise their official publications and party member writers. The "Organizational Program" passed by the 1905 Menshevik Congress did not stipulate that the party member writers must have any relationship with the official publications. Some Menshevik writers published their views, which openly violated the party program, in the publications of the liberal clique. Plekhanov placed himself above the party and published the "Journals of a Social Democrat" by himself. In this way, a situation in which "the publicists are outside the party, above the party" and a situation of "the party unto itself, and the publicists unto themselves" emerged. ("Collected Works of Lenin," Vol 8, p 515) In the NOVAYA ZHIZN, the first legal Bolshevik official newspaper, articles with a mystic flavor and in conflict with the party's world outlook had appeared. Lenin gave an angry reprimand: "Away with writers without party characteristics! Away with superman writers!" Lenin said this in view of the contemporary situation.

Lenin expected that the bourgeois intellectuals who advocated "absolute freedom of creation" would certainly condemn the ideas which he expounded concerning the party's publications. Thus, he devoted much space to criticizing and refuting the arguments for "absolute freedom of creation." 1) Lenin proceeded from "freedom of association," the party's organizational principle and organization discipline to criticize such arguments and clearly pointed out that the party "is also free to expel members who use the name of the party to advocate antiparty views"; 2) Lenin proceeded from the historical materialist principle that all ideologies in the confrontation between the classes and society have class character. He had revealed that the so-called "absolute freedom of creation," which meant the freedom that divorced itself from social class, could not exist in a class society. "The arguments for absolute freedom are only hypocrisy." Precisely in this place, Lenin directly touched upon the problem of the class character of literature and art as a component of ideology. He pointed out that the freedom the bourgeois writers, painters and actresses enjoyed was the dependence on the bourgeoisie in disguise and that nonparty literature and art could only exist in a classless society.

Thus, we can see that Lenin's article does in fact discuss the question of literature and art. In the article, the discussion on writings and the career of writing includes literature and can be applied to literature. This is Lenin's important contribution to the Marxist theory of literature and art. However, when we consider the background in which the article was written when reading through it all, we still cannot say that the question of literature is the article's central feature.

Finally, we would like to say something about the question of translation. The word "literatura" runs through the entire article. The origin of this word is the Latin word "litteratura." It is commonly used in many Western languages. It is a word with more than one meaning. Its important meanings include: 1) It refers to anything put into words in a general sense, meaning written works; 2) it refers to all forms of literary works which means "literature" in a specific sense as said in modern Chinese. In order to distinguish it from other writing, in Russian, the restrictive attribute is sometimes added and the word is written as "khudozhestvennaya literatura" (artistics works, sometimes rendered as artistic literature); 3) it is the collective term for publications in a certain aspect or sphere of knowledge. "Literator" may have the combined meaning of man of letters, writer and author. In modern Chinese, there is no readymade word directly corresponding to these two words. In translating these two words, we can only depend on the different meanings which the two words have in different linguistic contexts to render "literatura" as "documents," "writings," "literature," "publications," "books and periodicals" and "readers" while "literator" is rendered as "writer," "author," "man of letters" and "literary figure" and so on. The expression "partiinaya literatura" appears many times in Lenin's works. What is the meaning of it? When we speak of its form, it means the newspapers, magazines, pamphlets and leaflets published by the party; when we talk about its nature, it means the publications which are subject to the political, ideological and organizational leadership and supervision of the party and which maintain unity with the party's views, meaning that they follow the party's program and constitution and implement the party's policies, strategy and line. As early as in the party building period, Lenin had begun to use this expression. He held that in order to overcome the "handicraft form" in which the small groups conducted their scattered activities and build a unified party, it was necessary to establish a common literature (literatura). In his "A Draft, Program of Our Party" written in 1899, he said: "The need for unity, for the establishment of common literature (literatura), for the appearance of a Russian worers' newspaper arises out of the real situation." ("Collected Works of Lenin," Vol 4, p 201) In 1900, in his "Draft of a Declaration of the Editorial Board of Iskra and Azrya" and "Declaration of the Editorial Board of Iskra," Lenin further explained why "it is necessary to develop a common party literature (partiinaya literatura)," "a common literature, consistent in principle and capable of ideologically uniting revolutionary social democracy." ("Collected Works of Lenin," Vol 4, pp 286, 316) In 1903, Lenin wrote the "Draft Resolution on Party Literature (Partiinaya Literatura)" for the second congress of the RSDLP. In the article, he mentions that there was "the absolute and urgent necessity for a wide production of popular social democratic literature for all sections of the population and for the working class masses in particular." ("Collected Works of Lenin," Vol 6, p 427) The resolution "On Party Literature (O Partinoi Literature)" passed by this congress pointed out that: With the comprehensive development of the labor movement, we should correspondingly make the masses of workers understand the recent target and ultimate goal of the Social Democratic Party as clearly as possible. The resolutions demanded: 1) Run the party's "central official newspaper" well; 2) turn the "Azrya" into the "party's official publication"; 3) "edit and write separate editions of reading materials which are rich in content." ("Collected Resolutions of the CPSU," Book 1, p 57) In June 1905, in his "Preface to the Pamphlet 'Workers on the Split in the Party,'" Lenin pointed out that one of the organizational foundations for the combination of Bolsheviks and Mensheviks was that: "All party publications (partiinaya literatura), both local and central, must be completely subordinate to both the party congress and the relevant central or local organization of the party. The existence of party publications (partiinaya literatura) unconnected with the party is not allowed." ("Collected Works of Lenin," Vol 9, pp 152-153) There are many occasions when Lenin used the expression party publications. However, no more examples will be cited here.

In all the volumes of the Chinese translation of the "Collected Works of Lenin," there are many translations for the expression "partiinaya literatura," which are, in most cases, quite accurate. It is translated as "party books and publications," "party newspapers and publications" and "party publications" and so on. However, in this article, the translation in the past has been inherited, it is translated as "party literature." In classical Chinese, the term "literature" may mean the written philosophical, historical and literary works in a general sense. However, in modern Chinese, the term has a fixed meaning. It refers to the art of language. Thus, it is inappropriate to render the expression as "party literature."

Since Chinese and Russian are two different languages, it is difficult to find words in the two languages which correspond completely with each other. How to translate the word "literatura" is really a difficult problem. Having asked the opinions of many people and made studies on the problem, "literatura" is translated as "publications" and writing" in different contexts in the new translation. In the case in which literature is discussed, the word is still translated as "literature"; "literator" is translated as "author." In this way, theoretical and political writings, political comments and literary creations can be included. This may be closer to the meaning of the word.

Of course, if we examine the question from the angle of translation, there are still shortcomings: 1) Unanimity in translation has not been achieved. There are three translations for the word "literatura" in the same article. 2) In the original, the word has many meanings including the meaning "literature," however, in the Chinese translation, it is rendered as "publications." In this way, it is not obvious that it has the meaning of literature, or it is hard to see that it has such a meaning. In the original, literally, the expression "printsip partinoi literatury" is related to "the party character principle of literature." However, we cannot see the relation from the expression "the party's principle of publications" in the Chinese translation. There are doubtless limitations in translation caused by the differences between the two languages. However, after weighing up the advantages and disadvantages, we should first of all be faithful to the spiritual substance of Leninism. As for the difference in linguistic form, under the condition that the difference cannot be settled by translation, this should be subordinate to the content.

The checking this time has principally corrected the translation of the above key words. In addition, some other inaccuracies in the translation have been corrected. Due to our limited level, it is possible that there are still mistakes. Readers, please criticize them and point them out.

HAVE FULL FAITH IN EFFECTING A FUNDAMENTAL TURN FOR THE BETTER IN PARTY STYLE

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 9-13

[Article by commentator]

[Text] The 12th CPC Congress has affirmed the general task of the party in the new historical period and raised the inspiring call of creating a new situation in all fields of socialist modernization. Based on the demands of the general task of the new period in the 5 years from this congress to the next congress, our whole work in broad outline is to energetically push forward the building of socialist material civilization as well as spiritual civilization, unremittingly strengthen socialist democracy and the legal system, conscientiously rectify party style and organization and strive for a fundamental turn for the better in the condition of state finance and economy, a fundamental turn for the better in social convention and a fundamental turn for the better in party style. The three fundamental turns for the better can be described as the only road in proceeding from present reality toward our magnificent goal. Among them, the one with crucial significance is the fundamental turn for the better in party style.

Precisely because our party is armed with Marxism-Leninism-Mao Zedong Thought, it is a mature and serious party which has been repeatedly tested by setbacks and successes. Therefore, we have not and will not be intoxicated by the successes already achieved or remain stationary in the face of such successes. We hold that there are still many shortcomings, still many difficulties and still all sorts of things which are not as good as expected in our work. Our party is soberly aware of the gap which actually exists between its own position and its object of struggle, and is making great efforts to find practical and effective measures for solving various real problems. In its field of activities, one of the greatest advantages of the political strategy of our party is its skill in grasping the most vital trend and in finding out and firmly holding the basic link which is of decisive significance to the overall situation. Lenin pointed out: "Political events are very confused and complicated. They can be compared with a chain. To hold the whole chain, you must grasp the main link." ("Collected Works of Lenin," Vol 33, p 267) According to him, grasping this kind of link could be described as the "complete art of the politician." To achieve a fundamental turn for the better in the whole work of our party and state at present is one of the basic or vital links described by Lenin.

The report to the 12th party congress reiterated an important thesis put forward by Comrade Chen Yun long ago: The style of a party in power determines its very survival. At the same time, this also has a bearing on the rise and fall of our whole country and nation and on the success or failure of the socialist cause. Our party is the leader of economic construction, the leader of political power and the leader of all aspects of national life and all aspects of socialist undertakings. The line, policies and principles of the party must pass through party members at various levels and through the work and exemplary role of party members found everywhere all over the country before they can be understood and accepted by the broad masses of people and become their immense strength for transforming the world. Therefore, a fundamental turn for the better in the condition of our state finance and economy as well as social convention, even down to the progress and development in various fields of socialist undertakings, cannot be separated from the fundamental turn for the better in party style. This condition also applies to a district, a department or a unit. If the party organization there is strong and united and can implement the line, policies and principles of the party in the light of its own specific conditions and if the party members and especially the party cadres holding leading posts can modestly listen to the voices of the people, serve the people wholeheartedly, put others before themselves, show integrity and public spirit and work diligently and conscientiously with a spirit of dedication, then their work will certainly be very outstanding. Conversely, in places where little or no success has been achieved in work and in places where issues are tangled up and mistakes are often made, some of the reasons for this kind of situation can always be traced to the conditions of party style there. Party leadership is not just issuing instructions and giving orders. It can never be separated from the exemplary vanguard role of the party members and the leading party cadres in particular. If the party members themselves are unwilling to do good work, then it is very difficult to arouse the masses to do so. If the party members themselves are unwilling to correct mistakes, then it is very difficult to help others correct mistakes. This exemplary vanguard role of party members is an unshirkable duty in party leadership and it is an inseparable as well as extremely important part of adhering to and improving party leadership. "To correct others one must first correct oneself." This old maxim expressed by our people is a popular as well as profound truth. In a big country with 1 billion people, as long as the 40 million party members who form the vanguard of the working class and above all the comrades holding leading posts among them are worthy of the historical responsibility entrusted them by the people and if they really can become the quintessence and mainstay of socialist modernization and show a high degree of political consciousness, lofty communist ethics, strict discipline and an ability to cope with work in various fields, then a good work style of everybody united as one from top to bottom and working with one heart and one mind will appear. The broad masses of people will certainly closely unite round the party and will join us in overcoming various difficulties and obstacles on the path of advance, triumphing over all sorts of enemies and making a success of socialist modernization.

The task of effecting a fundamental turn for the better in party style solemnly affirmed by our party at its 12th congress has explained that not just a handful of comrades, but those from the highest leading body to the broad masses of party members have already fully understood its important significance. The party has noticed that inside the Communist Party, an extremely small section of the members, the absolute number of whom is not small, have demonstrated by their own deeds and words that they do not deserve the glorious title of Communist Party members. At present, it is true that inside the Communist Party, there is the problem of ideological and organizational impurity and impure work style. Facts have illustrated that not all veteran party members can in the same way withstand the tests of defeat and success or of bayonets and flattery. Under peaceful circumstances, along with the change of the party's position in the entire national life, certain people with evil designs have used joining the party as the ladder to acquiring personal gains, gratifying their lust for power and enjoying material comforts. Some people with selfish motives and even speculators and careerists, have quite easily wormed their way into the party and quite easily concealed their identity. The effect of the serious damage caused ideologically, politically and organizationally to the party during the 10 years of the "Great Cultural Revolution" can never be eliminated within a short time. A handful of remnant elements are even now unjustly occupying certain leading posts and waiting for an opportunity to make trouble. To those people in the party whose will is not strong, the policy of promoting economic exchanges with foreign countries and livening up the economy at home in recent years has provided them with objective conditions for becoming corrupt. Some party organizations have become weak and lax, and some basic level organizations are paralyzed. A handful of cadres have gone in for bureaucratism, privileged style and factional activities. Some have practiced corruption and graft, engaged in malpractice for selfish ends and committed serious economic crimes. All these have caused great resentment among the broad masses of party members and people, greatly hindered the healthy development of modernization and damaged the image of the party. If such conditions are allowed to exist and spread unchecked, the destiny of the socialist cause would be dreadful to contemplate. This cannot be tolerated by the party and the people of various nationalities.

We should also see that the new historical conditions and task not only require us to clean ourselves and show not the slightest mercy to various unhealthy tendencies, but they also require us to make new discoveries and breakthroughs in the series of work. The party must become the leader of socialist modernization and every party member must advance along the footprints of time. In restoring, upholding and developing the various fine traditions, we must keep on heightening our communist consciousness, open up new fields of knowledge, create new work methods and cultivate a new style.

In short, the accumulated problems left behind over the years have yet to be solved and the gap between the higher demands put to us by the historical tasks and the existing conditions must be filled. This means that we cannot but give the highest priority to carrying out party consolidation step by step in a planned manner. The 12th party congress has decided that beginning from the second half of next year, 3 years will be spent in carrying out a comprehensive rectification of party work style and party organization by stages and in groups. In the party consolidation, we must of course strive to eliminate the dark side, but at the same time, we must also strive to consolidate, develop and keep on opening up the bright side. This decision of the 12th party congress not only has the support of the comrades of the whole party, but it has also further strengthened the confidence of people of various nationalities throughout the country in the party.

Some comrades do not have enough confidence that the party style will make a fundamental turn for the better. They hold that the Central Committee has made repeated injunctions in recent years and even after the "guiding principles for internal party political life" has been transmitted and the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" has been adopted by the 6th Plenary Session of the 11th CPC Central Committee, some people still pay no heed to the instructions of the Central Committee and still stick to the old way of doing things and there is still not much change in the unhealthy tendency of using one's power to seek personal gain among the cadres, including the leading party cadres. In a certain sense, these comrades are soberly aware of the present condition in party style and have an urgent desire to effect a turn for the better in party style as quickly as possible. This is a good point. Compared with the Yanan period and the early period of the founding of the People's Republic, there is obviously still quite a gap in the condition of the present party style in many respects. However, there is definitely an improvement in the present party style compared with the "Great Cultural Revolution" and the 2 years immediately after the "Great Cultural Revolution." It has neither gone backward nor regained its original tempo. The reason why party style has so far not made a fundamental turn for the better only explains the seriousness of the longstanding malpractice and explains the need to make greater efforts because of this, but it cannot illustrate that it is impossible to effect a fundamental turn for the better in party style. All Communist Party members and especially party members holding leading posts, should not only use practical actions to overcome their own unhealthy tendencies, but they also have no right whatsoever to adopt an attitude of cool detachment toward the unhealthy tendencies of other people, or, apart from expressing appropriate indignation, only moan and sigh without doing anything. The important matter is not only in understanding the world but also in transforming the world. Transforming old work style and habits detrimental to the healthy development of the cause of the people, including the phenomenon of improper party style, is the sacred duty as well as responsibility of communists. We believe that even among comrades without sufficient confidence that the party style will make a fundamental turn for the better, most of them still support the line, policies and principles of the party, observe discipline and law and work conscientiously for the people. If these comrades will truly set a strict demand on themselves, uphold principles and wage an effective struggle together with the broad masses of party members and people against the phenomenon of improper party style, the power to carry forward healthy tendencies will be greatly enhanced.

This effecting a fundamental turn for the better in party style in the 5 years from this party congress to the next party congress is not just an inspiring slogan, but is also a solemn fighting task that should and must be fulfilled. This is not something prompted by a sudden impulse or thought up on the spur of the moment, but it is a goal determined by the CPC Central Committee as a result of making careful considerations, centralizing the common aspirations of the comrades of the whole party as well as the people of various nationalities and scientifically analyzing various subjective and objective factors. We can study the possibility and inevitability of this goal from many directions. What this article refers to are only its main points.

1. The leadership of the CPC Central Committee is correct, firm and united. In addition, a Marxist line and a series of policies and principles have been formulated. In the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," our party has affirmed the criteria for determining important historical rights and wrongs of the last 30 years and in the report of the 12th party congress, further summed up the work carried out since the 3d Plenary Session of the 11th CPC Central Committee and set our various grand tasks in line with objective foundations. After several years of effort, the leading bodies of the state at various levels have been readjusted, restructured and improved. Generally speaking, the power of leadership of organizations at various levels has already been basically placed in the hands of cadres loyal to the party and the people.

2. The masses of Communist Party members, regardless of whether proletarian revolutionaries of the older generation or comrades who joined the party at different periods after the founding of the People's Republic, including most of the comrades who joined the party during the "Great Cultural Revolution," have all stood severe positive and negative tests and they have learned much from history and actual practice. The party is making progress, and the party members are also making progress. Since the 3d Plenary Session of the 11th CPC Central Committee, the masses of party members have resolutely implemented the line, policies and principles of the party, worked together with the masses in labor, work and battle posts and played the hardcore role and exemplary role in the building of socialist material civilization as well as spiritual civilization and in the struggle against unhealthy tendencies and criminal activities. This is the main aspect of the ranks of our party.

3. The state is beginning to take the road to a truly healthy socialist system. Various laws, decrees and regulations for promoting orderly production, work and study as well as normalization of all aspects of social life have been promulgated or are being formulated and have been made more and more complete. We have already the first set of criminal law as well

as law of criminal procedure since the founding of the People's Republic, and the fifth session of the Fifth National People's Congress will also approve the new party constitution. We should say that how to become a qualified citizen, a qualified party member and a qualified party cadre is no longer restricted to a general appeal, but we have a series of clearly defined provisions imbued with the binding force of law and party regulation which can be followed. The party upholds the principle that party members and nonparty members are all equal before the state law and all party members are equal before the party constitution. On the basis of carrying out full investigation and study and respecting facts, we have adhered to the chosen course of safeguarding the interests of the people as well as the political dignity of the party and seriously dealt with many cases of violation of law and discipline.

4. As our party is in the position of leading the political power as well as all aspects of work of the whole country, the question of party style is particularly important for it has a bearing on the party and the masses. Under the difficult circumstances of the revolutionary war and peaceful construction in the 60 years since its founding, our party has developed a profound feeling for the people of various nationalities in China. The people warmly love, respect and trust the party and they place great hopes on the party. If we apply to China the words which Lenin used in appraising the Bolshevik Party, then we can say that the great CPC has indeed become the wisdom, honor and conscience of our era. The line, policies and principles of the party in recent years have greatly heightened the socialist enthusiasm as well as initiative of the masses. These lines, policies and principles have been formulated by our party by respecting the creative spirit of the people, summing up the experiences of creative labor carried out by the people and complying with the demands of the people and the trend of historical development. Their implementation has consequently produced outstanding results, and they have not only restored but also enhanced the prestige of the party. More and more workers, peasants and intellectuals are supporting the party and more and more people have linked their destiny with the party. Their political consciousness, creative spirit and historical responsibility are increasingly promoted. In this way, in promoting party work and supervising every party member, they play an increasingly important role. This has become a tremendous force for effecting a fundamental turn for the better in party style.

5. Since the 3d Plenary Session of the CPC Central Committee, the focal point of our work has been shifted to the track of building socialist modernization. Just as Marx said: "The coincidence of the changing of circumstances and of human activity can only be conceived and rationally understood as revolutionary practice." ("Selected Works of Marx and Engels," Vol 1, p 17) He also strongly criticized the idealist concept of splitting individual transformation from social development and blindly seeking historical dynamics in spiritual and moral self-perfection. According to the founder of Marxism, only by changing circumstances could the proletariat no longer be "old people" and "in the revolutionary activity of changing circumstances, they will at the same time also transform themselves." ("Collected Works of Marx and Engels," Vol 3, p 234) The

great significance of this strategic policy decision of shifting the focus of work will not only enable all our work to be henceforth placed on the correct track, but it will also inevitably lead to a profound change in the mode of activity and mode of thinking of the whole society including everyone. This inexorable trend of historical development cannot but demand a fundamental turn for the better in party style and also cannot but promote a fundamental turn for the better in party style.

6. The CPC Central Committee not only has resolute determination and careful policies, but also effective measures and clear steps for effecting a fundamental turn for the better in party style. This will be mainly achieved through party consolidation. The report of the 12th party congress pointed out: The overall rectification of party style and consolidation of party organizations can only be achieved on the basis of thoroughgoing ideological education. The consolidation will start with the leading organs and cadres. We must follow the principles of "learning from past mistakes to avoid future ones and curing the sickness to save the patient" and "clarity in ideology and unity among comrades," conscientiously develop criticism and self-criticism and take appropriate measures to solicitate opinions from the masses. In the final stage there will be a reregistration of all party members. We must take necessary organization measures to expel from the party those who still fail to meet the requirements for membership after education. At the same time, we must work out concrete methods to strengthen and improve party leadership so as to effect an improvement in the work of party organizations at all levels. These policies and measures summed up from the experiences of both the positive as well as negative aspects in our party history will certainly produce the desired result in practice.

People are learning from history and from the practice of the 3d Plenary Session of the 11th CPC Central Committee. We can gladly say that the serious damage to the prestige of socialism and Marxism has to a great extent been reversed. The so-called question of "confidence crisis," which created a racket for some time, has not been able to stop the progress of our cause. Apart from a handful of people who stand against the cause of the people, more and more of those among our comrades who lack sufficient confidence of effecting a fundamental turn for the better in party style, will doubtless, after patient and fully convincing ideological education, gradually change in the face of reality. A true communist does not require cheap confidence. He needs actual confidence. The most convincing education is the conscientious implementation of the guidelines of the 12th party congress and the action of the party members and party cadres themselves. On the other hand, we should admit that there has been a dark side in the past in the work of our party and government, there is a dark side at present and there will also be a dark side in the future. However, in the history of the 60 years and more since the founding of the party, the history of the 30 years and more since the founding of the People's Republic and the history of the 4 years since the 3d Plenary Session of the 11th CPC Central Committee, the history has always been that of the bright side triumphing over the dark side and the bright side constantly expanding. This is the history of the glorious chapter written by tens of thousands of party members in their selfless struggle for the liberation cause of the nation and people. The entire history of the past has proved that our people are undefeatable. Precisely the opposite, all enemies and difficulties will suffer defeat before our party and people. During the 10 years of the "Great Cultural Revolution," the Lin Biao-Jiang Qing counterrevolutionary cliques usurped an important part of party and state power and their influence spread all over the country. However, final victory did not belong to them but to our party and people. Judging from the angle of party style alone, no problem has been more serious than that decade in the 30 years and more since the founding of the People's Republic. The situation at present is entirely different from the past. The unfavorable factors are being overcome by us one by one, and more and more favorable factors have appeared. Under this kind of situation, there is no basis whatsoever for losing confidence in the party style making a fundamental turn for the better. We not only must accurately recognize the existing state of affairs, but we must also accurately see the inexorable trend of its development. If we ignore and cannot fully appraise the bright side of our work, or if we are not adept at observing the process of the bright side triumphing over the dark side in life, this at least is a reflection of one-sidedness in understanding. From the 3d Plenary Session of the 11th CPC Central Committee to the 12th party congress and since the 12th party congress, the unremitting progress in all our work is actually playing an increasingly important role in effecting a fundamental turn for the better in party style. This is our reality and this is where our hopes lie.

Effecting a fundamental turn for the better in party style within 5 years is the prerequisite as well as basis for the flourishing development of our socialist cause in the next decade and more. Without the success of these 5 years, we cannot talk about future successes. We should and must, during the fundamental turn for the better in party style, create a new situation in the building of socialist modernization. We profoundly believe that under the guidance of the 12th party congress, the broad masses of party members will struggle resolutely and persistently together with the broad masses of people and make proper contributions in way of changing the ideological and organizational impurity and impure work style in the party at present, and in way of bringing the cadre ranks more in line with the demands of socialist modernization.

CSO: 4004/12

PARTY CONSOLIDATION IS A MATTER OF PRIME IMPORTANCE TO OUR PARTY

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 14-19

[Article by Duan Junyi [3008 0689 3015]]

[Text] While setting forth the fighting program for the new historical period to the whole party and the people of all nationalities throughout the country, it was solemnly declared at the 12th CPC Congress that: "To achieve a fundamental turn for the better in our party style, the CPC Central Committee has decided on an overall rectification of party style and consolidation of party organizations, which will proceed by stages and by groups over a period of 3 years beginning from the latter half of 1983." This is a matter of prime importance to our party and a pressing strategic task entrusted to it by history since the development of the communist movement. The 1942 Yanan rectification movement was carried out after the historic change of our party during the democratic revolution period, and resulted in greatly raising the Marxist-Leninist level of the whole party and promoting unprecedented unity throughout the whole party. It enabled our party to grow to maturity and thus win victory in the war of resistance against Japan and the liberation war, and establish a new China. The present party rectification is to be carried out after another historic change of our party in the socialist period, and at a time when the party has gained a more mature understanding of the cause of socialist revolution and construction. We are sure that this rectification will heal the deep wounds inflicted on our party by the decade of internal disorder and bring about the fundamental turn for the better in our party style, so that our party will be more vigorous and, in the new historical period, hold high the banner of communism and lead the people of all nationalities throughout the country to achieve a triumphant victory in creating a new situation in all fields of socialist modernization.

In his report to the 12th CPC Congress, Comrade Hu Yaobang's exposition on party rectification and his analysis on the situation within the party was absolutely correct. In the light of my own understanding, linked with the conditions of Beijing municipality, there follow some of my opinions on the work of party consolidation.

The Necessity and Great Significance of Party Consolidation

Our party is the vanguard of the working class, armed with Marxism-Leninism-Mao Zedong Thought. In the struggle to lead the Chinese people in their fight to realize the communist ideal, and through repeated tempering and all kinds of severe tests, our party has gained the mettle and capability to bring about a radical change in the situation. Since the smashing of the Jiang Qing counterrevolutionary clique in 1976, and particularly since the 3d Plenary Session of the 11th CPC Central Committee, our party has accomplished in a few years: the arduous task of bringing order out of chaos in its guiding ideology, achieved major victories in setting things right in its practical work on various fronts and effected a historic change. History has once again proved that the CPC is worthy of its role as a solid core leading the people of all nationalities of China, and is sure to lead this huge vessel of China's socialism to surmount numerous difficulties under all kinds of complicated situations, and brave wind and waves to advance toward the brilliant future of communism.

Why then has the party solemnly set forth the task of party consolidation again, after it has led the people of the whole country in effecting this historic change? What is its necessity, and its great significance?

First, the key to fulfilling the fighting program put forward by the 12th CPC Congress in the new historical period is to consolidate the party well.

Historical experience teaches us that whenever the communist movement has developed to a new historical stage, particularly after effecting a historic change, there is bound to emerge a new period of vigorous development. Under these circumstances, for the sake of creating a new situation able to meet the needs of the new development of history, it is imperative to concentratedly and universally conduct education in Marxism throughout the party, rectify its ideology and style and consolidate its organization, solve all the contradictions that do not comply with the new historic development, arm the whole party with the line, principles and policies of the new period, deepen our understanding, unify our thinking, enhance our fighting capacity and lead the broad masses of people in their struggle to attain the magnificent new task.

The consolidation of the party we are faced with at present has the sole purpose of further eliminating the negative consequences left over by the 10 years of internal disorder, creating a new situation in all fields of socialist modernization and attaining the fighting program put forward by the 12th CPC Congress. In order to attain the three fundamental turns for the better in the state's financial situation, social mood and party style, we must first of all strive to attain the fundamental turn for the better in party style. Because only through consolidating the party and attaining the fundamental turn for the better in party style can we lead the fundamental turn for the better in social mood, which is also conducive to promoting the fundamental betterment of the state's financial situation. In order to create a new situation in all fields of socialist modernization and do a good job in the building of socialist economy, politics and spiritual civilization with communist ideology as its core, it is necessary above all to build well the CPC, which is the core leading our cause, through rectifying party style and consolidating party organization. Under the leadership of the party, only by carrying forward the spirit of creativeness, innovation and forging ahead proper for a party member, setting an example and leading the broad masses of people in fighting with one heart and mind and exerting themselves in the struggle, can we attain the new, great task put forward by the 12th CPC Congress. In working for the four political guarantees of socialist modernization, the fundamental guarantee is to consolidate the party.

Second, in view of the problems existing within the party and the historical conditions facing us, it is imperative to consolidate the party.

Due to the decade of internal disorder caused by the "Great Cultural Revolution," the ideological and organizational building of the party were seriously sabotaged. The party organization of Beijing municipality suffered serious destruction. Through the restoration and consolidation carried out in the past few years, particularly the readjustment carried out at all levels of leadership bodies, the situation has greatly improved. Most of the party organizations and leadership bodies are good, and better than they were. They have resolutely supported and implemented the party's line, principles and policies since the 3d Plenary Session of the 11th CPC Central Committee and made tremendous efforts in the arduous struggle to set things right. They have achieved marked results and played the role of proletarian vanguards. The party organizations of the Shoudu Iron and Steel Company, Beijing coking plant, Beijing optical instrument factory, Beijing machinery factory, Beijing second cotton mill and other units are the outstanding representatives among them. But there still exist a lot of problems of ideology, organization and style in some of the party organizations and leadership bodies. According to an investigation and analysis made on 3,658 party branches in Beijing municipality, less than one-third of advanced party branches were correct in their line, united in their leading bodies and able to play the role of a fighting force. Around 60 percent of the branches were in a mediocre condition, 10 percent were backward, and among them, some branches were in a state of paralysis or semiparalysis. The main problems existing in the backward branches were: 1) Leading members were not united, each had cliques of their own engaged in factionalism, and tried to seize power and blame others; 2) their ideological lines were not correct. They had a cynical and resistant attitude toward party policies, were despondent and did not properly do their work; 3) they made use of their authority to seek private gains and privileges and even formed cliques to pursue selfish interests. They practiced dishonest methods and violated the law and discipline; and 4) they practiced decentralism with regard to the higher levels by doing things in their own way and practiced "what I say goes" toward lower levels. Similar states of affairs also existed to a certain extent in the party organizations of a number of units, and particularly the problems of leading bodies being weak, slack and low in revolutionary enthusiasm were quite serious. It will be impossible to fundamentally restore and enhance the fighting capacity of the party organizations if we do not find a remedy to these cases and treat all of them by consolidating the party.

In view of the conditions of the broad masses of party members, among the 650,000 party members in Beijing municipality, 310,000 joined the party before the "Great Cultural Revolution," 250,000 joined the party during the "Great Cultural Revolution" and 90,000 were admitted to the party after the downfall of the Jiang Qing counterrevolutionary clique. The majority of the party members are good and relatively good. Many of our outstanding party members have played an exemplary vanguard role on various fronts, united the masses in working hard for the socialist cause and firmly stood in the forefront of setting things right. Among them there were people praised by the masses, such as the advanced activist who "worked ahead of time," the "iron man" who continuously worked in the first line down a mine, although he suffered from cancer and was injured while on duty, the salesman who worked for more than 20 years in supply and marketing but remained honest and upright, the forest guard who protected trees for his collective, the fine cadre who wholeheartedly served the people and so on. In 1981, of the 1,027 model workers of the municipality, 818 were party members, 79.6 percent of the total. As Comrade Hu Yaobang pointed out: "All the splendid successes of the party and the people have been achieved precisely through the inspiring example given by such fine core members of the party." This is the main trend among the broad masses of party members. Meanwhile, we must be clear about the fact that due to the remaining consequences of the sabotage caused by the decade of internal disorder and the increasing invasion of bourgeois ideology under the new conditions, there still exist the problems of impure ideology and style among some of our party members; there also exists the phenomenon of decadence, which we must be fully alert to. Some party members resist the line, principles and policies formulated by the party since the 3d Plenary Session of the 11th CPC Central Committee, are doubtful and hesitant about communism; even up to now, some still stick to the ideological system of Lin Biao and the "gang of four" and resent the party; some party members are imbued with bureaucratism and irresponsible in their work or seek for personal privileges by making use of their authority to pursue private interests; some party members practice anarchism and ultra-individualism, and impair the party's organizational discipline, some have carried the decadent and vulgar stuff of the bourgeoisie into the party, as if nothing can be done without inviting people for dinner. They pursue a bourgeois lifestyle and some even engage in smuggling, offering and accepting bribes and engaging in corruption. Although these people were only a few in number, they have seriously corroded the body of the party, impaired the prestige of the party among the masses of people and to an extent affected the people's confidence in the cause of socialism. We must also be aware that nearly 40 percent of the party members of the whole municipality were admitted to the party during the "Great Cultural Revolution." Among them, many still lack training in the party's program and the basic knowledge of the party. They do not understand, or do not fully understand, how to be a qualified Communist Party member. Some party members even say: "Why is it that we party members and not the masses must take the lead in our work?" Some were even admitted to or drafted into the party at the "battlefront" of rebellion and up to the present still fail to conform to the requirements of a party member. There also exist various problems among veteran party members. So, without consolidating the party, it will be impossible to fundamentally change the above state of affairs. We must be aware that due to a variety of domestic and international conditions, the struggle between capitalist corrosion and socialist anti-corrosion will exist for a long time in our country and sometimes even be acute. At present, we have already exposed many shocking facts. Some party members who were not firm enough have been attacked by and succumbed to the material or spiritual "sugar-coated bullets" of capitalism; some others have to a certain extent been corroded by bourgeois ideas and invaded by the trend of bourgeois liberalism. Although we have achieved good results in carrying out education against this corrosion combined with combating serious criminal activities in the economic field, we have still not fundamentally solved the problem. Only through consolidating the party and building a steel wall with communist ideology and strict discipline resistant to the corrosive influence of capitalist ideology, can the vast number of our party organizations become a powerful fighting force and the broad masses of party members become firm, sober-minded and worthy vanguard fighters of the proletariat. Under the conditions of the new historical period, this is a fundamental measure for maintaining the purity and fighting effectiveness of the Communist Party, so that it can maintain an invincible position.

Third, it is imperative to consolidate the party well if the Communist Party in power intends to always keep its revolutionary spirit young.

The position of a proletarian revolutionary political party after seizing political power is quite different from before. This change of position will inevitably bring about a series of new problems in building the party. From the development of the communist movement up to the present, one of the major theoretical and practical problems that must be properly solved is how to always keep the revolutionary spirit of the Communist Party in power and its party members young, how to strive forever for the realization of communist ideals, forever keep in close connection with the masses of the people and forever work for their well-being. At present, the majority of our party members were admitted to the party after it seized power. They have joined the party in a peaceful environment and it is easy for them to be cadres after they have joined the party. After they become cadres, they have power and authority. If they do not work for communism and the well-being of the people but become individualist, then they are bound to make use of their authority to gain advantages from the state, collective and masses, or even form a clique to pursue selfish interests, undermine the foundations of socialism, and turn from being the people's servant to being a lord over them. In the light of the experiences of our party, in solving this problem, we must carefully admit party members strictly according to the stipulations of the party constitution, strengthen education and supervision over them, constantly carry on criticism and self-criticism, strictly observe party discipline, work out all kinds of necessary rules and regulations; we must also conduct large-scale party rectification over a certain period, universally, systematically and profoundly carry out education in Marxism, consolidate our organization and, rectify our ideology and style, raise the quality and level of all party members and expel from the party those members who have morally degenerated and who are still not qualified after education, or persuade them to withdraw from the party. This is an important strategic measure for the construction of the Communist Party in power. Today, at a time when the whole party and the people of all nationalities of our country are working for the great task put forward by the 12th CPC Congress, we have lost no time in conducting party consolidation. This will inevitably have far-reaching historical significance in creating a new situation in all fields of socialist modernization and in the vigorous development of the communist movement in the days to come.

Conditions Are Ripe for Consolidating the Party

After the smashing of the Jiang Qing counterrevolutionary clique, consolidating the party became a historical mission confronting us due to the serious damage to our party caused by the 10 years of domestic turmoil. Without consolidating the party, the situation in which the party's style of work is impure cannot fundamentally change. However, there had to be a process between the needs arising from the development of history and the actual implementation of party consolidation. In the wake of the 12th party congress, the conditions for consolidating the party became completely ripe.

1. We have successfully fulfilled the historical mission of setting the party's guiding ideology to rights. The party's line, principles and policies followed since the 3d Plenary Session of the 11th CPC Central Committee have been proved correct by practice. The thinking of the whole party has been unified on the basis of the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC." The 12th party congress' report and the new party constitution have further explicitly laid down the programs for China's socialist modernization construction and for the building of the party and have stipulated more strict requirements for party members and the basic guiding principles to be followed by the coming movement of consolidating the party. All this has laid a solid ideological foundation for the coming movement.

2. Now we have the firm and unified leadership of the party Central Committee. The leadership of party organizations at all levels is now mainly controlled by people who support the party's line, principles and policies since the 3d Plenary Session of the 11th CPC Central Committee. So long as we make careful and meticulous preparations and conduct proper guidance and organization, the consolidation of the party is guaranteed to develop steadily and healthily along a correct course.

3. The broad masses of party members have a strong desire to consolidate the party, and the masses of the people also cherish great expectations of the coming consolidation.

4. We have been making preparations for consolidating the party in many fields for a long time. Since the implementation of the "principles on

inner party political life," some activities with the purpose of consolidating the party have been carried out step by step to a profound degree in connection with major political study, the implementation of the principles and policies laid down by the central authorities and the reorganization of some leading groups. Taking the work in Beijing as an example, over the past year, the Beijing municipal authorities have conducted discussions on the topic of "serving the people and bearing responsibility to the people" in connection with the study and implementation of the "principles on inner party political life"; they have checked unhealthy tendencies such as spending public money on extravagant eating and drinking, and forming special ties between units so as to facilitate the private giving and accepting of gifts; have inspected education among cadre's children; have required leading groups at all levels to review their work of the last year, and have universally carried out democratic elections in grassroots party branches. Recently, Beijing also carried out activities opposing the corruption of capitalist ideology and strengthening education in communist ideology. All this embodies the spirit of rectifying the work style of the party. The education in consolidating the party has been consciously carried out in all these activities. In fact, they were all preparatory measures for consolidating the party. Especially in the recent education on the subject of opposing corruption, all party members in Beijing have received training in rotation. Among the party cadres at county, district and bureau levels, 569 people have given party lectures, accounting for over 40 percent of the total number of cadres at this level. Besides this, more than 5,000 leaders of grassroots party committees have given party lectures. A good start has been made on the whole party concentrating on party building throughout Beijing. Though these education activities differed in scale and depth, they all provided important ideological, organizational experience and public opinion preparations for consolidating the party. On the basis of studying the 12th party congress documents and through experiments in some units and the summing up of experience, these activities will be developed into the official consolidation of the party in a methodical way.

We Must Fulfill the Task of Consolidating the Party With High Standards and High Quality

How shall we do a good job in consolidating the party, in accordance with the stipulation of the new party constitution and the requirements on consolidating the party set forth in the congress report and in connection with the conditions in Beijing?

First, we must clearly realize the objective and requirements of this movement of consolidating the party.

The new party constitution has set forth more stringent demands on party members and has laid down explicit stipulations on enhancing the fighting power of party organizations, upholding and improving the party's leadership. This should be taken as a yardstick in consolidating the party. In line with this yardstick, we will carry out an overall rectification of the work style and organizations of the party and turn party members into ones who are qualified and conform to the requirements of the new party constitution. At the same time, we will effectively improve the state of affairs in party organizations at all levels so as to turn grassroots party organizations into staunch fighting bastions which conform to the requirements of maintaining good relations with the masses laid down in the new party constitution and turn leading groups at all levels into cores of leadership in conformity with the requirements of the new party constitution.

Since the coming consolidation of the party will be an overall rectification, according to the stipulations of the new party constitution, its main specific requirements in all aspects should be as follows: In the field of ideology, party members and cadres should be required to bear in mind that the objective of struggle is communism and that the principle is to serve the people wholeheartedly. They will be required to eliminate the bureaucratic style of work and mentality of enjoying privileges which can easily appear among party members and particularly party cadres. The shameful conduct of abusing powers to seek private interests and encroaching upon the interests of the state, the collectives and the masses for private benefits as well as the unhealthy tendencies of violating the people's interests and divorcing oneself from the masses should all be criticized and overcome. Party members and cadres will be required to form a communist attitude toward work, a revolutionary spirit of selflessness and to carry forward the revolutionary spirit of being ambitious and willing to do pioneering work, making innovation, and being dedicated. They should be willing to sacrifice all their personal benefits and struggle for communism all their lives. In the field of politics, party members and cadres are required to maintain a political stand in line with that of the party central leadership, to uphold the four basic principles, to correctly implement the party's line, principles and policies since the 3d Plenary Session of the 11th CPC Central Committee and to struggle for the great tasks set forth by the 12th party congress. The problem that some party members and organizations refuse to implement instructions issued by the central authorities and take a dissenting attitude toward the party for feigning compliance while acting in opposition should be solved. In the field of organization, party organizations at all levels will be consolidated and perfected. Party members and cadres will be required to uphold the principle of democratic centralism. The party's collective leadership will be strengthened. The practice that one person decides everything, and that of decentralism, will be opposed. The spirit of uniting people from all corners of the country will be carried forward so as to strengthen party unity and oppose the sectarianism within the party. Party discipline must be strictly enforced by strengthening the attitude of bearing in mind the party's interests. Extreme individualism, anarchism and all kinds of illegal behavior will be criticized and eliminated. It is absolutely impermissible to maintain the following people in the leading posts: those who gained their powers through rebellion; those who harbor a seriously sectarian attitude; those who have participated in beating, smashing and looting; those who oppose the line taken by the party central leadership since the 3d Plenary Session of the 11th CPC Central Committee; and those who have committed various serious criminal activities. These people will be dealt with one after another once they are discovered still to occupy leading posts. In the field of work style, party members and cadres will be required to restore and carry forward the party's good tradition and the three major styles of work namely, combining theory with practice, maintaining close ties with the masses and carrying out criticism and self-criticism. The dirt of subjectivism and bureaucratism as well as the bad style of casting aside principles, concealing faults and glossing over wrongs, boasting and toadying and fearing to offend other people should all be eliminated. At the end of this movement, when party members are asked to register, we must strictly follow the new party constitution's stipulations and expel those members who fail to meet the requirements even after education, or persuade them to withdraw from the party.

Second, the work of consolidating the party must constantly uphold the correct guiding principles.

In the history of our party, there exist rich experiences in both positive and negative aspects. We should carry forward the spirit of the Yanan rectification movement and adhere to the principles of "learning from past mistakes to avoid future ones and curing the sickness to save the patient" and "achieving the two-fold objective of clarity in ideology and unity among comrades." When approaching party members who have committed errors, we should, starting from the desire for unity, through serious criticism and self-criticism and by adopting suitable ways to listen to the opinions of the masses outside the party, help them genuinely realize and correct their mistakes so as to achieve unity on a new basis. We must prevent and oppose the erroneous principle and method of "cruel struggle and merciless blows" which have in the past been used by the party. Furthermore, we must prevent evil persons from taking advantage of this opportunity to frame up and attack good comrades. At the same time, we should also prevent perfunctory attitudes which makes the movement a sham.

Third, the work of consolidating the party must be brought under the leadership of the party central authorities, must be treated very prudently, be prepared in a very meticulous way and be carried out in a planned and methodical manner.

According to conditions in Beijing city, our initial plan is first to organize party members and cadres to seriously study the 12th party congress report and the new party constitution and then go in for consolidation in the fields of ideology and organization on the basis of general education. We will start work in some selected units to gain experience this winter and next spring. The overall movement will start in the second half of next year by stages and groups in a planned and methodical manner under leadership from top to bottom. The consolidation of the party will be linked with the administrative structural reform and reorganization of enterprises and institutions.

Carrying out ideological education for party members in a universal, systematical and thorough way is the essential measure for doing a good job of consolidating the party. When studying the 12th congress report and the new party constitution, we should simultaneously study the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" and the "principles on inner party political life." We must particularly emphasize education in communist ideology for party members and basic theoretical education in Marxism-Leninism-Mao Zedong Thought. We should educate them in communist ideals and in the party's line, principles and policies. We should also educate them in the basic knowledge of the party, in the requirements for party members, party spirit, style of work and discipline. We should place stress on making all party members clearly realize the party's character, position and function and be aware that only the people who are willing to struggle for communism throughout their lives and to sacrifice their all for the revolution can be qualified members of the CPC so that they can consciously compare themselves to the requirements of the new party constitution for party members and find out their deficiencies. At the same time, we should be good at educating party members with both positive and negative lessons so as to arouse their revolutionary enthusiasm and make them profoundly realize the necessity of consolidating the party, and determine to dedicate their all to the party, the people and the communist cause. This method has been adopted in some Beijing units when carrying out the recent education in opposing corruption. This lively and concrete method has achieved marked results and should be carried forward on a larger scale. Historical experience shows that only by holding up a clear-cut communist banner and unswervingly implementing the party's current policies in a down-to-earth manner, can we gather the vast number of party members and progressives outside the party to carry out arduous struggles under the communist banner and to unite the whole nation to win victories in revolution and construction. When smelting steel we need to keep the furnace burning, and only when the communist enthusiasm of the vast number of party members is fully aroused can all kinds of nonproletarian ideological dregs be washed out of the minds of party members. Only thus can we achieve success in consolidating the party.

The experimental work of consolidating the party in a few selected units is a preparatory step for smoothly carrying out the movement in an all-round way. Though we have accumulated rich experiences in carrying out the movement of consolidating the party, the current conditions are very different from those in the past and the situation inside the party has also changed. Apart from this, many party members and cadres at middle and grassroots levels do not have practical experience in this field due to the fact that we have not consolidated the party for many years. Therefore, the experimental work in selected units is very important. We can gain experience there and use it to guide general work. This winter and next spring the Beijing municipal authorities will select a number of units in organs subordinate to the municipal party committee, industrial, capital construction and financial departments and in both rural and urban areas as the experiment points for consolidating the party. The relevant departments of the municipal party committee and party committees (or party groups) at district, county and bureau levels will send leading cadres to take part in the experimental work and will pay attention to study the experience and problems in consolidating the party so as to make preparations for the work of all-round consolidation.

Carrying out the work of consolidating the party by stages and in groups in a planned and methodical way under a unified leadership is an important guarantee for the healthy development of the work of consolidating the party. This work should be started in the municipal party committee and then gradually develop to leading groups at district, county and bureau level. After this, the consolidation of grassroots party organizations can be carried out by stages and in groups. In this way, the movement will develop from top to bottom at one level after another under the leadership of the upper party organizations. As for those party organizations which have been paralyzed or corrupted, their senior organizations should send work teams there to bring the party work directly under control.

Furthermore, the work of consolidating the party should be linked with administrative structural reform and the reorganization of enterprises and institutions. A unified arrangement should be worked out. In the course of consolidating the party, it is necessary to continue to strengthen the building of leading groups at all levels. It is necessary, by upholding the principle of appointing people on their merits and giving priority to their political integrity, to promote those young and middle-aged cadres, who have comparatively high education level, strong professional ability and organization and leadership capabilities and who can open up new prospects in work, to leading positions in place of those incompetent cadres who cannot do so. Reformative measures should be taken as the work of consolidating the party is carried on. Concrete measures for strengthening and improving the party leadership should be worked out so as to consolidate and develop the achievements of the movement. It is necessary to lead the revolutionary enthusiasm of party members emerging after the work of consolidating the party into their professional work and production so as to promote work and production and to create a new situation in which the work in all fields is going full steam ahead.

Our era has sounded the clarion call to create a new situation in all fields of socialist modernization. We must, in the course of studying, publicizing and implementing the 12th party congress' documents, do a good job of consolidating the party and build all party organizations in Beijing city into vigorous fighting command posts able to create new situations, which will unite and lead the people throughout the city, under the leadership of the party Central Committee and in accordance with the four-point instructions on the building of the capital issued by the party Central Secretariat, to build Beijing into a modern capital of our socialist country with a high degree of civilization and democracy, and to continuously advance our work in all fields in concentrated, enthusiastic and orderly manner.

COMMENTS ON DISCUSSIONS CONCERNING PLANNED ECONOMY AND MARKET REGULATION MECHANISM

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 20-22

[Article by Jing Ping [2529 1627]; preface by the editor of the RED FLAG Publishing House to the book "Collections of Theoretical Essays on Planned Economy and the Market Regulation Mechanism"; which collects articles on this topic published in major newspapers and magazines from the publication of the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" to June 1982]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted by the 6th Plenary Session of the 11th CPC Central Committee points out: "It is necessary to practice planned economy on the basis of public ownership and at the same time, give play to the supplementary role of regulation by market mechanism." Both the historical experience and current situation of China's socialist economic construction have shown us the fact that whether the national economy can healthily develop and whether the socialist economic system can be further consolidated depend on whether this basic principle is put into effect in an all-round way.

Since the publication of the resolution, theoretical and actual workers in the economic field have widely discussed the problem concerning planned economy and the market regulation mechanism and have published many articles on this topic. Over the past year, the people's understanding of this problem has been raised to a new level and the discussions have achieved useful results.

As we know, when discussing the reform of China's economic institutions a few years ago, people generally felt that there existed many maladies in our economic institutions, such as the overcentralization of power, rigidly planned management which covered too wide a range and exerted too rigid a control, the lack of decisionmaking powers in enterprises and the neglect of the function of the market mechanism. Undoubtedly, it is correct to point out these maladies and seek ways to solve these problems and this has played an active role in promoting the reform of our economic institutions. At the same time, there being no need for reticence, some improper and even erroneous viewpoints have also come up in the discussions. For a certain period, many comrades did not take seriously the state of affairs. In the wake of the publication of the resolution, Comrade Chen Yun repeatedly emphasized that it is necessary to adhere to the principle of "giving the leading role to planned economy and the supplementary role to the market regulation mechanism." Since then, a new situation has been brought about.

In the articles published in the past year, many comrades on the one hand fully affirmed the great achievements of the theoretical discussions concerning the reform of our economic institutions and on the other hand, seriously analyzed the problems existing in the discussions a few years ago. Apart from inappropriate wording and inaccurate propositions, which were problems that were hard to avoid and should not be taken seriously, they mainly pointed out the following erroneous viewpoints: Considering that the law of planned development of the national economy does not exist under the socialist system; considering that our country at present is not provided with the material conditions for practicing a planned economy; considering that inefficient management and poor economic results are inevitable outcomes of the planned economy; considering that mandatory plans should be abolished and that state plans should only be treated as references and should not have a binding force; considering that planning regulation mechanism is only suited to the management of macroeconomy while microeconomy, that is, the activities of enterprises, should be subject to the market regulation mechanism; considering that all enterprises, including those owned by all the people, should be economic entities which are completely independent and are provided with all the characteristics and rights of commodity producers and should thus have the power to independently handle production, exchange and other economic activities; considering that only by relying on the law of value, can production and other economic activities be properly regulated; and considering that market economy is much superior to planned economy. Among these viewpoints, some were only the ideas of a few individuals, but others were supported by a number of comrades. Seriously and objectively pointing out these viewpoints which negate and are detrimental or may at least lead to the weakening of our socialist planned economy and then analyzing and criticizing them, rather than remaining indifferent toward them, represents an earnest and scientific attitude. This shows that our economic theoretical workers have made progress and improvement in their understanding. This is a good thing. Launching discussions around these substantial issues of principle will never hinder the scientific study of theories but instead, it will only promote this study. This will not impede the reform of the economic institutions, rather, it will benefit the healthy development of this reform.

In the articles published in the past year, many comrades started from the actual conditions of our country, applied the basic principles of Marxism to the socialist economy to sum up positive and negative experiences in China's economic construction. They made some concrete expositions on the important issue of "giving the leading role to planned economy and the supplementary role to market regulation mechanism" and further explicitly affirmed the following viewpoints:

1. The national economy developing in a planned way is a basic characteristic of the socialist economy. Only by practicing planned economy on the basis of public ownership, can we guarantee the proportionate and coordinated development of various branches of the national economy and various links of social reproduction and guarantee the growth of production in conformity with the interests of the whole society. In this way, the practicing of planned economy embodies the requirement of the socialist basic economic law. Abandoning planned economy will inevitably lead to anarchy in social production and to the destruction of the socialist public ownership system.

2. Our country has been provided with the conditions for practicing planned economy. The superiority of planned economy has been proved in the past 30 years' practice of economic construction. It is true that maladies existed in the specific systems of planned management in China and many major mistakes did occur in our planning work, but all this can be improved and corrected. We should never suspect and negate the basic system of planned economy for these reasons.

3. Practicing mandatory plans is a basic sign of the socialist planned economy and is also an important embodiment of China's socialist system of ownership by all the people. If mandatory plans, the state's direct management of the production and distribution of the means of production and consumption with a bearing on the national economy and the people's livelihood and the state's direct command over backbone enterprises were to be completely abolished, our plans would, like plans in capitalist countries, only play a coordinating role in the enterprises' productive and economic activities. In this case, it would be hard for the state to control necessary economic strength to guarantee the national economy developing in accordance with the interests and demands of the entire society. This would inevitably lead to confusion in the social economic life and would not guarantee the advance of our economy as a whole along the socialist course.

4. As for the forms of planned management, apart from direct plans, or mandatory plans, many products and enterprises may and should be subject to indirect plans, or guidance plans, which mainly rely on prices, taxes, credits and other economic levers to guide enterprises to the fulfillment of state plans. The attempt to exclusively practice mandatory plans without regard to actual conditions and necessity is also unfavorable to the proportionate development of the economy and unfavorable to the improvement of economic results.

5. Under the conditions of the planned economy playing a dominant role, it is also necessary to define a certain scope in accordance with the specific situation of various periods and allow enterprises to conduct free production and exchange within this scope, that is, to allow the production and exchange of a section of products to be regulated spontaneously according to the law of value. In this way, this market regulation mechanism is subordinate to the planned economy and just plays a secondary role, but it is essential and serves as a useful supplement to the planned economy. When

emphasizing the importance of the planned economy, we should not neglect the supplementary role of market regulation mechanism.

6. In order to properly organize the socialist economy, it is necessary to make all efforts to follow objective economic laws and first of all, the specific laws of the socialist economy, such as the socialist basic economic law and the law of proportionate development. At the same time, it is necessary to follow the basic law governing commodity production, that is, the law of value. When practicing both mandatory plans and guidance plans, we must take into account the situation of market supply and demand and the requirements of the law of value. It is wrong to deny that the socialist basic economic law and the law of planned development are the principal regulators in social production and to exaggerate the regulatory role of the law of value. It is also wrong to deny the regulatory role of the law of value and to think that emphasizing the planned economy means negating the necessity of developing commodity production and exchange.

7. We must reform China's economic planning institutions. The basic principle and orientation of this reform must be: 1) socialist in character; and 2) Chinese in style. The result of the reform must be to strengthen and consolidate rather than destroy the socialist economy. Measures adopted in some capitalist countries, including some effective measures in those countries, are not certainly applicable in our country. We should not mechanically copy even the measures of other socialist countries because our conditions are different from theirs. We must seriously sum up our own experience and only take foreign experience and ideas as references, rather than foundations.

8. The central problem of institutional economic reform is the implementing of the principle of giving the leading role to the planned economy and the supplementary role to the market regulation mechanism. It is necessary to correctly define the scope and limits of mandatory plans, guidance plans and market regulation mechanism. Different degrees of decisionmaking power should be vested in different types of enterprises so that their business results can be linked with their material benefits, and responsibility, power and interests can be combined together. Both administrative means and economic levers should be put into practice. This reform involves a wide range and should not be treated as some nonessential amelioration. Many problems in this reform need to be solved and we must not take this as an easy thing. We must take an active attitude, work out feasible programs and put the reform measures into effect step by step.

9. We must improve our planning work and place our plans on a better scientific base. We should always maintain our guiding ideology and principles in the economic field in conformity with objective reality and try our best to maintain the overall balance in the national economy. We should properly arrange various major ratios in the economy and take into account the interests of the three aspects, namely, the state, the collective and the individual. We need to draw up a plan system which combines long-term plans with short-term plans and to set up a rational system of indicators.

It is necessary to strengthen economic forecast and statistical work and adopt a scientific method for planning. The application of prices, taxes, credits and other economic levers should be included in state plans and taken as an important component of the plans. Only by continuously improving the level of our planning work and making our plans more scientific, can we firmly consolidate the authoritativeness of our plans.

10. We must protect the solemnity of the state unified plans and oppose various behaviors of weakening and shaking off the state planned management. Localities, departments and enterprises should have the notion of taking the interests of the whole nation into account. Selfish departmentalism, decentralism and the liberalist tendency must not be allowed to go unchecked. The state should use both administrative and economic means and perfect economic legislation and carry out inspection and supervision so as to guarantee economic activities being handled in accordance with state plans.

Over the past year, the discussions concerning planned economy and market regulation mechanism have achieved useful results. Of course, not all questions have received unanimous replies. On the implications of some concepts, on the expression and exposition of some viewpoints and even on some essential problems, writers still have different opinions. These differences of opinion remain to be solved in the future discussions. As for how to turn the principle of giving the leading role to the planned economy and the supplementary role to market regulation mechanism into concrete measures and how to set up a concrete system in accordance with this principle, it requires us to make a great deal of investigation and study of China's reality and carry out thorough theoretical discussion.

In order to facilitate economic theoretical and practical workers and other cadres and masses to acquainting themselves with and studying the issue of planned economy and market mechanism, we compile this collection of theoretical essays. This book collects some articles published in major newspapers and magazines during the year from the publication of the resolution on the party's historical questions to June 1982. These articles are arranged in the sequence of their publishing time. In addition, the book also includes a few articles which have not been published before. The editor has revised the topic of a few articles. An index of the articles on planned economy and market regulation mechanism is attached at the back of this book. This is the first collection. A follow-up will be compiled and published according to the progress of the discussions. We hope writers and readers will offer help to our editorial work.

SAFEGUARD THE SOCIALIST PUBLIC OWNERSHIP OF LAND

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 23-26, 32

[Article by Yi Zhi [2496 0037]]

[Text] On the ownership of land in China, the draft of the revised constitution of the PRC clearly defined: "Land in the cities is the property of the state." "Land in villages, towns and the suburban areas is the property of the collectives, except for the portion which belongs to the state according to provisions of the law; house sites and private plots of cropland and hilly land are also owned by collectives." "The state may in the public interest take over land for its use in accordance with the law." "No organization or individual may appropriate, buy, sell or lease land, or unlawfully transfer land in other ways." This has affirmed that the present stage of China accords with the public ownership of the means of production and there exist two kinds of socialist ownership of land; further, it has confirmed the principle that the land owned by the state and the collective is inviolable and cannot be regarded as a commodity to be sold, bought or leased. These principles affirmed by the fundamental law of the state which has supreme legal effect have great immediate significance in safeguarding the socialist economic basis of our country and promoting the management of land.

I

Land is the basic means of production for industrial and agricultural production, and cannot be substituted. It is closely linked with the people's life and the existence and reproduction of mankind. Socialism is incompatible with the private ownership of land. In their "Manifesto of the Communist Party," Marx and Engels pointed out: "Wielding its political domination, the proletariat" "expropriates landed property and provides land rent to the state for its expenditures." ("Collected Works of Marx and Engels," Vol 4, pp 489, 490) In "places where there are large number of peasants who own the land," Marx proposed to "promote the transition from private ownership to collective ownership of land." ("Collected Works of Marx and Engels," Vol 18, pp 694, 695) After the victory of the democratic revolution, China abolished the feudal ownership of land in rural areas and carried out the principle that those who till own their land. The collective ownership of land in rural areas was gradually established during the cooperative transformation of agriculture and finally realized with the establishment of the advanced agricultural producers' cooperative; whereas the state ownership of land was gradually set up and strengthened through expropriation, confiscation, taking over (of unowned land in town and country), redemption (of capitalist estates), requisition and other methods. The establishment of the two kinds of public ownership of land eliminated an important source of exploitation and oppression that the Chinese people had suffered from, cleared away the obstacles and paved the way for China to become a prosperous, strong and modernized country. These are the great achievements gained by the Chinese people in the struggle to solve the land problem in the past decades under the leadership of the CPC.

The establishment of the two kinds of socialist public ownership of land was widely supported and respected by various organs, organizations, state-owned enterprises and institutions, collective economic organizations and the vast numbers of civilians in cities and villages. On the whole, it was relatively stable. But in recent years this system has been encroached upon to varying degrees. In rural areas, it has been mainly a case of some cadres and commune members building their own houses and willfully occupying cultivated land belonging to the collective; in city suburbs, it has mainly been some production teams, organs and enterprises illegally buying, selling or leasing land; and in cities, there have also been serious cases of illegal land grabbing. The practices of violating rules and occupying land are also rather serious. Some units and individuals try every possible way to occupy open spaces, green plots, parks, public roads and residential courtyards. Land under construction is also forcibly occupied. What merits special attention is that when some units owned by the whole people apply for land for the purpose of construction, they budget liberally but spend sparingly. After they have got the land which the state paid a high price for in taking over, if they do not or cannot use it, they exchange it for houses or materials, or sell, lease or transfer it at a high price. If we allow all the above practices of violating state or collective ownership of land to spread unchecked, the socialist economic basis of our country will be seriously impaired and a great deal of valuable land will continue to be ruined and wasted; this will lead to consequences dreadful to contemplate.

Although land is a means of production, it is somewhat different from that of machinery equipment, factory buildings, raw materials, fuel and other means of production. It cannot be reproduced. One mu occupied will be 1 mu less. Moreover, its position is fixed and cannot be moved. China has a large population with limited land and the distribution of our population is seriously uneven. At present, in many cities and rural areas, there have been a shortage in usable land. Along with the increase of population and the development of the construction cause, this situation of shortage will be more and more intensified. Therefore, to cherish every inch of land is our existing national policy and also the bounden responsibility of all organs, organizations, enterprises and institutions, economic organizations of the collectives and the residents of cities and villages. It is stipulated in the draft of the revised constitution of the PRC that "socialist public property is sacred and inviolable." The land owned by the state and the collective is sacred and inviolable. The establishment of socialist public ownership of land offered the possibility for the rational exploitation and utilization of land in a planned way. But by applying this possibility to reality, we still need to rely on the people of the whole country and particularly all cadres to safeguard the socialist public ownership of land. Recently, the Secretariat of the CPC Central Committee and the State Council emphasized: In the past few years, the situation in rural areas of occupation of cultivated land and building of houses was quite serious, and in addition, more land is found to be occupied by the state every year for its construction. This further accelerates the contradiction of the large population and limited land of our country becoming more striking. If we do not attach great importance to this situation and take drastic measures to stop it, it is bound to have serious consequences. Therefore, it is demanded to strictly control the occupation of land and building of houses, and resolutely check the trend of cadres taking the lead in grabbing land and building houses. This instruction is very important.

In order to safeguard the socialist public ownership of land, we must further perfect the land legislation, study and improve the system of land management and make clear the problem of ideological understanding concerning the public ownership of land.

II

One of the important reasons why our socialist public land has frequently been violated in the past was that our country's land laws were not complete and there were no legal guidelines when problems concerning land management occurred. For instance, since the cooperative transformation of agriculture, although the party and government time and again reaffirmed in its policy documents that buying, selling and leasing of land were forbidden, people nevertheless bought, sold and leased the land, and there were no clear-cut laws stating what responsibility the culprits should bear. Consequently, even if the cases of selling, buying and leasing of land were investigated, those guilty were not duly punished. A culprit who offended the law "made self-criticism for a short spell but got benefits throughout his life." This then created a precedent for future illegal activities. Here is another example: We criticized the rural grassroot level cadres for arbitrarily distributing house sites. But for a long time we did not suggest any way to properly distribute the house sites, with the result that each locality chose their own way. Some even competed with others, keeping pace with a "high standard."

Socialist land law is a powerful weapon for us to protect the socialist public ownership of land. It is inconceivable for such a big country as ours with a large population and limited land not to have complete land laws.

It is gratifying that in the past 12 months or so, the State Council has successively promulgated several important land decrees. A number of provinces, municipalities and autonomous regions have also formulated their own local land regulations. There has been great progress in the land legislation work of our country. But we still do not have our own land law. There are some details of the newly promulgated land decree that need to be formulated and put in force. We must continue to firmly grasp the work in land legislation. The clear and perfect stipulation laid down in the new constitution for the ownership of land for our country at the present stage will establish a prerequisite for the land law of China.

To make a law is not easy but, in a certain sense, to carry it out is even more difficult. A special feature of many cases of illegal land dealings is that both parties received benefits at the expense of the state. Therefore, these cases are not easily discovered in advance. When it is investigated, it has already become a fact. There are also great obstacles and difficulties in dealing with these cases. Moreover, there are the phenomena of too many opinions and, ambiguous responsibility in land management at present which meant that land appeared to be managed but in fact was not; this seriously hindered the development of land management work. Urban land should of course be managed by the real estate departments. But too many heads involved in the management cause it to be in a confused state. Therefore, after we have laid down a series of land decrees, it is necessary to further perfect the administrative organs of land management and earnestly grasp the work of enforcing the law. It is imperative to have a full understanding of the difficulty of enforcing the law. We must educate the comrades of judicial and land management departments to bear the spirit of responsibility to the state and our later generations, act according to the law and enforce it strictly.

III

One of the main defects in the economic management system of our country is the idea of eating out of the "big communal pot." This is also true in our land management system, and in the management system in the state-owned land in particular.

At present, when land is needed by enterprises and institution units owned by the whole people, provided that the construction or extension project is approved, the construction unit can in the name of a state representative take over land for its use, no matter how high the expenses, because they are allocated, paid and reimbursed by the state. After the land is taken over, it is owned by the state and used by the construction unit. Prior to the "Great Cultural Revolution," the units owned by the whole people had to pay to the state a small fee for the use of land. During the "Cultural Revolution," this symbolic payment was also revoked. Now, the units of the ownership of the whole people gratuitously use state land. Although this kind of system conforms with the simplified tax system, it has also brought a lot of problems. Among them the most typical one is gratuitous use of land. Everybody rushes in sharing from the "big pot" of state land, thus causing a shocking waste in the use of land. In requisitioning land, we often find cases of requisitioning more land than needed, or requisitioning it much earlier than it is used, or even not using it at all. The crux of the matter is that land owned by the state is free. At present, the reason why the capitalists of foreign countries rush day and night and seize every minute to build factories is that every inch of land is extremely expensive there. The capitalists wish to finish it as quick as possible in order to recover the cost of purchasing the land at an early date. But in our metropolis, when houses are demolished, it is usually the case that after several years they are still in ruins. There is no choice but to erect an advertisement board to cover up the sight. If land is not used gratuitously, but must be paid for, and if whoever takes over the land and does not use it, will be levied heavy taxes by the state, or the land be taken back in due time, then the situation may be far better than the present.

In socialist society there still exists differential land rent. The land rent of construction sites is mainly determined by the position of the land. Whether or not the enterprises are situated near the sources of raw materials, markets and water and electric supply centers, and whether or not the communication and transportation and coordinative conditions are convenient, have great influence on the operation of their businesses. It is not because of good operation of business or large amount of labor put in that some of the enterprises make a good income, but mainly because they benefit by the position of the factory (or shop; the mines benefit from rich resources). At present, wherever the land used by the state-owned enterprises is situated, it is free; therefore, the differential land rent is then distributed to enterprises that are situated in a good location. This not only causes uneven income, advantages and hardships, it also encourages people to crowd into the metropolis and particularly to seize the land in the center of the city and the vegetable plots in the suburbs.

In the past, when the management system of the entire planning, finance, supply and marketing and others were all sharing from the "communal pot," the above defects of free use of land did not arouse the attention of the people. Now, the initiative power of enterprises have been extended and we have instituted the economic responsibility system. When the other fields began to actively solve the problem of "communal pot," the problem of "communal pot" in the state-owned land became more conspicuous and its defects exposed more clearly. This is an important problem that calls for a solution in reforming the land management system.

In order to make the construction units use land more economically and change the free occupation of state-owned land to a paid one, it is absolutely necessary for the state to levy land-use tax on private house sites and land used by units for construction purpose, according to the quality and quantity of land. The state must pay relevant fees for requisitioning, exploiting and managing land. At present, the expenses in requisitioning land constitute a large amount of every capital construction investment allocated by the state. This sum of money is not part of the social reproduction process and does not form fixed assets. It cannot be gradually withdrawn, depreciated or recouped, and is not included in the rent; therefore the state is not reasonably compensated. It is necessary to levy a certain amount of tax on the units that use land to compensate the expenses used in requisitioning, exploiting and managing land.

It seems that the state charging the state-run enterprises for using land is like collecting a sum of money from one side but reducing the profits that should be turned over on the other; the wool comes from the sheep's back. In fact, collecting and not collecting are quite different, and the results of the wool coming from this or that sheep's back are also quite different. Collecting is advantageous for maintaining the state ownership of land and prevents the reduction of state ownership of land to unit ownership. Under the condition of extending the initiative power of enterprises and the enterprises having relatively independent economic rights and interests, it is a very beneficial thing for the state to levy tax on using land and levying a higher tax on the well located land and suburban vegetable plots according to the principle of differential land rent. This reflects a series of policies of the party and government in valuing land, readjusting the income of enterprises, controlling the population increase in cities, protecting the environment and so on.

IV

In order to do a good job in land management in rural areas and city suburbs and safeguard the socialist collective ownership of land, at present, it is necessary to clarify some ideological understanding on the problems concerning the collective ownership of land.

The first problem is forbidding the buying and selling of land. The constitution and law of China has a stipulation forbidding the buying and selling of land. It not only forbids the units owned by the whole people to sell state-owned land, but also forbids the units owned by the collective to sell collectively owned. This is not a willful stipulation, but a scientific one. Some comrades hold that since land belongs to the collective, they have the right to sell. They do not understand the reasoning behind this stipulation.

The buying and selling of land is an outcome of private ownership of land and it is an important reason why in history, land has been monopolized and annexed by a handful of people. In the old society, the rich had fields from north to south, but the poor did not even possess a speck of land. In addition to the rulers plundering land from the laboring people by means of political and military power, this was also caused by the rich buying land from the impoverished peasants. Through the democratic and socialist revolutions, China abolished the private ownership of land and nobody was allowed to use land to exploit others. We had the objective conditions for forbidding the buying and selling of land. In order to protect the socialist public ownership of land, the law of our country has a stipulation forbidding the buying and selling of land. The state recognizes the proprietary rights of the collective units over the land and legally protects collectively owned land from being encroached upon. Collective units are by no means allowed to sell land at will. If the collective units are allowed to sell land at will, it will inevitably mean giving the green light to a few people to engage in speculation, and conversely, all bad deeds will come one after another. This is not safeguarding but sabotaging the collective ownership of land.

In socialist society, there exist the production and exchange of commodities, but land is not a commodity. Further, viewed from the development of the causes of production and construction, it is not necessary to carry out a policy of free buying and selling of land. If the state needs land for capital construction, it can requisition land from the production teams through legal procedures after approval by the land management organs. The state does not have to purchase it. If the commune enterprises need land for construction, they can also requisition land from the production teams through legal procedures after approval by the state; they do not have to purchase it either. At present, those who intend to purchase land are mainly units who want to extend their capital construction which is not under the planning of, or approved by, the higher levels. If the free buying and selling of land is allowed, it will be impossible to control the planning of cities, capital construction and land utilization.

The second is the problem of bounds between the public ownership of land and the system of production responsibility, that is, the bounds between proprietary rights and utilization rights of land.

After land reform was carried out in China, the proprietary rights and utilization rights of land were always connected together. After land reform, land was returned to the individual peasants. The individual peasants were the owners and users of land. After a considerable time after the setting up of advanced agricultural producers' cooperatives in rural areas, the land was cultivated by the collective and therefore, the collective was the owner and user of land. Because the "two rights" were combined together for a long period, this caused some of the peasants and cadres to be mixed up about the bounds. After the implementation of the responsibility system of fixing output quotas for individual households and assigning land to each household in exchange for fixed levies, proprietary rights and utilization rights were separated or partly separated. Therefore, some people misunderstood it as "dividing the fields among individual households" and "land has returned back to its original owner." In the past few years, some people have built houses and graveyards and used the soil to bake bricks on contract land, private plots and fodder fields. This is related to the mixing up of the bounds between proprietary rights and utilization rights of land. What we have to do is to do more propagation and explanation work, and lead the peasants and cadres to draw a clear line of demarcation on this issue. We must realize that in our socialist society, it is normal to separate the proprietary right and utilization right of land. We must help the cadres and commune members to draw a clear line of demarcation between proprietary right and utilization right, so that they can understand that they have the right to use contract land, private plots, hilly land and fodder fields to a certain limited extent, and that they do not have the proprietary right over this land. This is advantageous for maintaining the collective ownership of land and also for perfecting the system of production responsibility in rural areas.

Marx predicted 110 years ago that "the ownership of land is the primitive source of all wealth. Now it has become a big problem. The future of the working class depends on how this problem is properly solved." ("Collected Works of Marx and Engels," Vol 18, p 64) This big problem has basically been solved in our country. The problem we face today is to consolidate our achievements and perfect our public ownership of land. With the efforts of all of us, we believe that our socialist public ownership of land will constantly be perfect and further definitely manifest its superiority.

LAUNCH THE ADVANCED PRODUCERS MOVEMENT ON A LARGER SCALE

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 27-32

[Article by Yu Yannan [2456 3601 0589]]

[Text] The advanced producers movement is a mighty endeavor undertaken by the working class and other working people of our country in their establishment of socialism and march forward toward the gigantic objective of the realization of communism. This movement is entirely different from past political movements, particularly those so-called "political movements" during the 10 years of civil disorder. We use the word "movement" here to indicate that it is a popular campaign which is organized, purposeful and rather prestigious. And the advanced producers movement is a popular production emulation movement which is led by the party and the government, lies within the jurisdiction of the law and statutes, possesses the definite objectives of establishing material civilization and socialist spiritual civilization, both of a high degree of development, and is conscientiously and voluntarily participated in by the working class and other laboring people.

I

The advanced producers movement is a major part of the workers' movement of a new historical era in the establishment of socialism in our country.

A working class still exists in a socialist era. Since there is a working class in existence, naturally there is a workers' movement. Following the seizure of political power by the working class, it may be said that the first step has been taken insofar as the realization of its ultimate objective, namely, communism, is concerned. Hence, the workers' movement has not, and cannot, come to a standstill. But since the tasks and the pivotal points of work taken on by the working class before their seizure of political power were different from those shouldered by them after the seizure, the workers' movement necessarily has suffered vast changes in content and form. Before the birth of new China, the central tasks of our working class were, under the leadership of the Chinese Communist Party, to form a close alliance with the peasant class and other laboring people, to overthrow the rule of imperialism, the landlord class and the bureaucratic capitalist class, and to liberate the social productive force.

Hence, during the revolutionary period of new democratism, the basic content of our workers' movement was to engage in class struggles to destroy corrupt production relations and their upper structures which had impeded the development of the social productive force. In this context, during this period, the workers' movement resorted to such measures as strikes, parades and demonstrations and even engaged in more violent and hostile action such as armed struggles. Following the birth of new China, the political and economic status of the working class suffered a basic change. They have become the leadership class of new China and the masters of the new society. Particularly after the basic completion of the socialist transformation of the ownership system of the means of production and the elimination of the class status of the exploiting class, the central task and the pivotal points of work of the working class, generally speaking, were to devote their utmost efforts to socialist construction concurrently with raising the social productive force, to reform certain portions and links of the production relations and their upper structures which were not in conformity with the development of the productive force, in order to enable the socialist system to gradually become perfect. During this new historical period, the basic content of the workers' movement was to establish a modern, powerful socialist nation which was highly civilized and highly democratic. In other words, the content of the workers' movement shifted from the past liberation of the social productive force to the proper protection and development of the social productive force. Hence, under the new historical conditions, the workers' movement has taken the form of being democratic and emulative and not brutal and hostile.

Some comrades have frequently entertained too narrow a concept of the workers' movement. They seem to believe that the workers' movement existed only before the seizure of political power by the working class and that the workers' movement could exist only when the workers were engaged in struggles with the capitalist class, with or without, the shedding of blood. Such a concept is one-sided, and does not realize that the workers' movement necessarily possesses a different content and a different form in different historical periods. For the same reason, it does not conform to objective reality if we confine the workers' movement merely to political struggles and do not take it as embodying the important contents of the actual practices in production and in the study and renovation of science and technology engaged in by the working class during the socialist period. In reality, certain noted political activists of the proletarian class long ago took socialist labor emulation in the male and female workers' movement as one of the most glorious chapters in the history of socialist construction.

II

A large-scale development of the advanced producers movement carries an enormous significance and role in promoting the establishment of a material civilization and socialist spiritual civilization in our country.

The history of mankind's production development tells us that at any period in history and in any production department there existed a small number of relatively advanced producers who adopted relatively advanced production techniques and created relatively advanced production norms. Subsequently, an increasing number of producers have learned their techniques and measured up to their norms until finally what had been originally the production level of the small number of advanced producers became the production level of society at large and, as a result, production of the entire society increased. By that time, producers of an even more advanced level began to appear. They adopted techniques of an even more advanced level and created norms of an even more advanced character. They influenced and led many more producers to join the ranks of the advanced. In this way, the snow-balling effect gathered momentum. In general, this may be said to be a picture of the development of socialist social production and demonstrates the general law governing the development of socialist social production. In the interval, if any big and important invention in production technique is made, then it will lead to an important reform in production technique and promote a big increase in production. One of the chief superior points of socialism is that it provides various advantageous conditions and opens up unlimited extensive prospects for the growth of millions of advanced producers, for the full display of their subjective initiative in production, and for the utilization and propagation of their advanced experiences and their various kinds of inventions and creations. No other social system can provide such advantageous conditions.

As early as at the end of 1955, Comrade Mao Zedong had brought forth a proposal to start a socialist emulation campaign in our country. On the basis of this proposal, in March next year the CPC Central Committee issued a circular entitled: "Notice Concerning Active Leadership Over the Advanced Producers Movement." Thus, 17 years before the "Great Cultural Revolution," our country had already started the advanced producers movement. Although in the interval there were certain setbacks and errors, generally speaking, it had played an important role particularly during the period of the recovery of the national economy and the period of the completion of the First Five-Year Plan. After the smashing of the "gang of four," especially since the 3d Plenary Session of the 11th CPC Central Committee, popular activities striving to become various kinds of advanced producers were again rampant. This was a result of the implementation of the policy eulogizing advanced people on various frontlines, development of labor campaigns in various forms, an upsurge of such activities as technical renovation and making rational suggestions, and the "learn from, and surpass, the advanced" campaign which had for a time been interrupted during the 10 years of internal disturbance. According to statistics compiled by relevant departments in an investigation of 11 large-size backbone enterprises, in recent years roughly 20 percent of their staff members have won such meritorious titles of labor as labor model, advanced producer, shock worker in the new Long March, 8th March Red Banner pacesetter, and contributor of meritorious services to the four modernizations. Since the founding of the PRC, for every thousand staff members, roughly five have been awarded, at one time or another, titles of labor models of various grades. At the moment, in various localities, departments and enterprise units, the development of the advanced producers movement is still uneven and varying results have been attained. For example, at the end of each year, Daqing oil field carried out a campaign to "appraise advanced workers, compare contributions, elect models, and exemplify pacesetters." This has played an important role in the development of construction of the oil field and in stabilizing its high yield in recent years. The Daqing Oil Well Drilling Corporation combined labor emulation simultaneously with implementing the economic responsibility system. Last year, its oil well drilling footage was more than 600,000 meters, and its entire year's production tasks were filled 28 days ahead of schedule. Since last year, the Shanghai No 5 steel plant has promoted activities to solicit rational proposals from its staff members and in this way has enhanced economic benefits to the enterprise. This plant has a steel rolling workshop with over 700 workers. Last year, from July to the end of the year, roughly 10 percent of its workers made some 116 rational suggestions. Following investigation, 36 of these proposals were accepted. An investment of 31,000 yuan was required to carry out these proposals and awards amounting to 141 yuan were made. Implementation of these proposals will yield profits of 1.65 million yuan a year. This is equivalent to 8.7 percent of the total profits received yearly from this workshop at present. Of these 36 proposals, 19 were carried out before the end of last year. An investment of 5,000 yuan was made but the profits realized that year amounted to 420,000 yuan. A team leader in this workshop made a suggestion on "improving the productivity rate." The making of the suggestion, its examination and eventual implementation took only 2 days. Not a cent was spent; each year, 360 more tons of steel can be rolled, increasing profits by 45,000 yuan. Innumerable facts have shown that the vigorous development of socialist labor emulation to "compare, learn from, catch up, help and surpass" can readily be transformed into a powerful popular movement in which everybody learns from the advanced and catches up with the advanced. It can vigorously arouse people's enthusiasm and urge for improvement, change people's spiritual consciousness, promote technical rebuilding in the various departments of the national economy, and improve the labor productivity rate, work efficiency and economic effect of various trades and industries. In this way, the prosperous development of socialist economic construction in our country can be promoted.

The central theme of the current large-scale development of the advanced producers movement is to greatly increase the labor productivity rate and the economic effect to the enterprises. Development of the movement enables the rapid development of social production and in this way can provide to society even more plentiful products to satisfy the daily increasing material and cultural needs of the people. This is a special characteristic of the socialist system's superiority over capitalism. Therefore, vigorous development of the advanced producers movement helps in consolidating and developing the socialist system.

In the various departments of the national economy, the carrying out of widespread, penetrating and sustained labor emulation activities of a popular nature and the attraction of an increasing number of employees and workers into the movement to learn from and to catch up with the advanced not only can produce enormous economic benefits but also possesses an inestimable significance and importance in improving the cultural and technical quality of the entire working class, in gradually reducing the differential between physical labor and mental labor and in nurturing and raising the class consciousness and good virtues of the working class, particularly the young workers.

According to relevant investigation statistics, there are in our country some 60 million young workers and employees under the age of 35. The mainstream and quality of these youthful workers and employees are good. They represent an exceedingly hopeful new generation of our country's working class. But for various reasons, for the time being a rather large proportion of these youthful workers are not imbued with the revolutionary spirit and superior virtues of the industrial proletarian class. Frequently they lack the far-sighted ideology of the working class, lack the enterprising spirit, and sometimes look for momentary "comforts" and "material enjoyment." They often fail to put their exuberant vitality to good use and devote too much of it on petty household affairs. A small minority may even make trouble out of nothing, engage in brawls and fights, and even step on the dangerous road of lawbreaking. Under the present conditions of the great majority of workers being young people, we urgently need to vigorously develop popular activities which are of service to this great enterprise of the working class so as to attract these young workers, to make them strive to become the advanced and to do their utmost to fulfill their own wishes by means of creative labor and so that they can effectively display and put to good use their exuberant vitality and precious time via beneficial channels. And the advanced producers movement is precisely the type of good popular activity which can meet immeasurably well the above demands. The advanced producers movement not only possesses an extensively popular character but also has a highly competitive and emulative nature. All this is extremely suitable to young people's special temperament. Like competition in sports, labor emulation can immensely arouse the ideology, enthusiasm, fighting spirit, and wisdom of the young workers, and can turn a dull daily work routine into ever-surging waves and undulations, full of excitement and steam. It can place young workers in a lively atmosphere and rhythms of strain, excitement, enjoyment and gladness. This makes them feel the fullness of life, the beauty of ideologies, and the bright prospects of the future. When they reap good results in their technical training, in technical renovation, in making rational propositions and in such activities as production emulation and pacesetting competition, when they are aware of their own importance and role in socialized production, and when they enjoy the fruits of glory and happiness of their creative labor, they will become increasingly interested and will even conscientiously regulate their own actions in conformity with the countenance of the working class. In short, vigorous development of the advanced producers movement and enthusiastic mobilization of the extensive masses of young workers to join the movement will make the young workers more readily accept the rigid training of socialized production, rapidly cultivate the revolutionary character and superior quality of the proletarian class in industry, and become truly worthy successors to the working class.

Advanced producers represent an advanced level of the productive force. On the one hand, they utilize their own advanced technique, advanced experiences and advanced norms to help and to teach the producers around them to learn and handle these advanced technology and experiences and to fulfill the advanced norms, in this way directly promoting the development of the productive force. On the other hand, by means of their exemplary deeds, their advanced thinking and brand-new lifestyle, they wash away the dirt and poison of the old ideologies of old society, introduce new styles and behavior to the age of socialism and communism, attract and encourage millions of people to adopt a new labor attitude and to undertake new fields of work, and thereby promote the onward development of the productive force. Since the founding of the PRC, on the various production fronts of our country a large number of celebrated advanced producers (workers) and model workers have appeared, such as Meng Tai, Shang Xiuli, Zhao Mengtao, Shi Chuanxiang, Wang Jinxi, Peng Haimu, Luan Fu and Zhao Chune, and those well-known labor models up to now are still diligently laboring on various fronts for the socialist enterprise. In addition, we may mention the nationally known advanced production teams and units such as the "Mao Zedong locomotive unit," Ma Hengchang subgroup, Ma Wanshui engineering team, and Daqing Nos 1202 and 1205 drilling teams. This large number of celebrated advanced individuals and advanced groups, plus thousands of advanced producers (workers), individuals and advanced units, demonstrating in their own selves the lofty spirit of loyalty to communist enterprises, their good professional virtue and their brand-new socialist lifestyle, truly constitute the pillar of our country's socialist spiritual civilization. Hence the further large-scale development of the advanced producers movement and an increasing number of employees and workers joining it certainly will form an extremely colorful and noble atmosphere which will wipe away the various kinds of evil habits and ways which corrode the socialist enterprises on our motherland.

Since the founding of the PRC, as a result of the vigorous development of the advanced producers movement, the working class has enhanced its political consciousness and improved the quality of its culture and technology. The ranks of advanced elements in the working class have also continuously expanded and improved and large numbers of advanced producers and labor models have grown up to become superior engineering and technical personnel, or administrative cadres, or leadership cadres, in the party and government circles. All this categorically shows that the advanced producers movement is in the nature of a big school for the working class to learn communism, is a large melting pot for the steeling of advanced elements among the working class, and at the same time constitutes an extremely important road and form, under the new historical conditions, for the self-rebuilding and self-development of the working class.

III

There is little doubt that the development of the advanced producers movement embodies an important significance and role in the construction of our country's socialist material civilization and spiritual civilization. However, at present, many leadership cadres have not yet given the matter the importance it deserves. In organizing the advanced producers movement, the leadership circles concerned are full of worries. They seem to have their hands and feet tied and can hardly do anything. In such enterprise units, the trouble lies in not having attached enough importance to the movement, to the lack of a precise objective and concrete procedural measures, and an inability to envision definite results. It often happens that after vainly propagating for a while, the movement came to a halt. Naturally, conditions of this kind must be rapidly rectified. In addition, there exist causes which impede and adversely influence our development of the advanced producers movement on an even larger scale. For example, many enterprises to varying degrees display a bad tendency to isolate or to attack the advanced. This has seriously disrupted the development of the "learn from the advanced" campaign. Also, certain problems and evil practices have been found in such phases as selection, use and propagation of the advanced producers.

According to an investigation made by relevant departments, out of the 126 nationally known cotton spinning and weaving experts, 66, or 52 percent, have been taunted or criticized. At the Yinchuan Cotton Weaving Mill in the Ningxia Autonomous Region, a national labor model, working as a weaver recently overfulfilled his spinning and weaving tasks each year. He has been in the habit of using his rest hours to teach new workers his techniques. Somebody actually wrote words on the blackboard taunting him and urging him "not to show his stuff any more." In some localities and enterprise units, it is difficult for the backward to become advanced. In the Changsha Restaurant in Hunan Province, a young pacesetter used to have participated in evil ways in her early life. After the smashing of the "gang of four," she was "reborn." She was found reliable in her work and finally won the honor of being a pacesetter in the new Long March. She was elected to the municipal political consultative committee. Unfortunately, very soon, doubts, taunts and rumors were cast on her. This was a serious spiritual blow to this youth who had just begun a new life. She was so depressed that she thought of committing suicide. Again, for example, according to an investigation made by a certain department store in Shanghai, it was found that of 65 advanced producers investigated, 17 felt that taunts, jeers and attacks were the main impediments to their continued advancement. A large number of facts show that the evil wind of isolating and attacking the advanced is blowing in varying degrees of severity in many localities and units and that this is more or less a general phenomenon. The various levels of leadership in the relevant departments must therefore pay special attention to this problem and make serious efforts to rectify it. The reason why the evil wind of isolating and attacking the advanced has not been effectively stifled in time is basically because of the weak and loose disposition of the party leadership in the organizations concerned. Isolating and attacking the advanced is basically incompatible with the advanced character of the working class and its political party, the nature of the socialist system, and the construction of the socialist spiritual civilization. The firm rectification of such an abnormal phenomenon has a direct bearing on the consolidation and development of the leading position of the working class in advanced thought and the expansion and development of the enterprise of the working class. Hence, our party and government leadership at various levels should take a clear-cut stand in representing and supporting the advanced and make a thorough investigation of the plight of the advanced producers and other advanced people in their respective localities, departments and units. They should educate the medium-level and backward workers and employees on how to correctly treat the advanced people and criticize the erroneous ideology of not seeking advancement for oneself and also keeping others from advancing. At the same time, they should firmly rectify the erroneous viewpoint and behavior which considers that all advanced producers must be advanced in everything and all through their lives and thus foster a demand for perfection on the advanced producers. Acts which falsely accuse and attack the advanced must be sternly investigated and dealt with. Serious cases involving a breach of criminal codes must be prosecuted. Only in this way is it possible to foster a good social and political environment in which everybody learns from the advanced and strives for advancement.

In the final analysis, whether or not an employee or worker should be conferred a labor honor and with what kind of labor honor should be determined by whether or not he has made any contribution and the extent of his contribution, if any, to the cause of promoting the development of the social productive force and the construction of socialist material civilization and spiritual civilization. This should be our fundamental criterion for the selection of advanced producers. Following the development of socialist modern construction enterprises in our country, there should be an increasing number of advanced producers standing in the front ranks of holding, promoting and creating modern technology. This represents an objective demand made on us by the passage of time. According to an investigation, last year a certain machine-building plant in Shaanxi Province elected 96 advanced producers and 45 advanced teams at factory grade. By far the great majority of them had been commended on doing overtime work, overfulfilling production quotas, enduring great hardships and undergoing extremely hard labor. However, lacking were such advanced examples as the trial production of new products, renovation of tools and equipment, adoption of advanced technological processes and advanced techniques, strengthening of scientific management and improvement of the economic benefits to the enterprises. Conditions of this kind are fairly common in other enterprises. The advanced model of the "old cattle type," the name of one of the categories of advanced models, represents one of the treasures of our party and people. The "old cattle spirit" it exhibits is the revolutionary spirit of fighting hard struggles, daring to sacrifice, and giving one's all until one's dying day. It is a vivid representation of communist ideology and is an enormous spiritual force supporting our construction of a modern powerful country. Therefore, from now on, we should have still more of this type of advanced model. But if only this one type of advanced model is available, then certainly it is not sufficient and can hardly meet the development needs of socialist modern construction. Hence, concurrently with training and bringing up, with great warmth, the existing advanced people (particularly creating the necessary conditions for them to learn and control scientific and cultural knowledge), we must pay adequate attention to the discovery, nurturing and support of advanced models who possess the special features of being new and conforming to the existing era's requirements. At present, the number of young labor models is small. This has directly reduced their influence and role among the vast masses of workers. According to an investigation made by relevant departments on 11 large-size backbone enterprises, of over 90,000 young workers, only 330 workers have been selected as labor models. This is 0.3 percent of the total number of young workers, whereas of over 50,000 elderly workers and middle-age workers, 397 people have been selected as labor models, or roughly 0.8 percent of the total number of elderly workers and middle-aged workers. The latter proportion was nearly 300 percent of that for young workers. Of course, there are various reasons for the small number of labor models among young workers, including the erroneous thought of exacting the demand for perfection among the young workers. Therefore, from now on, simultaneously with propagating the advanced and selecting labor models of the old and middle ages, we must break through the bondage of conservative ideology and boldly post up young advanced model personages so as to lower the average age of the contingents of labor models. We must also hold more single-item emulations for advanced ranking. This will make it possible for more workers and employees to take part. Moreover, in order to correctly and sufficiently bring the role which labor models should possess into full play, we must firmly rectify the current phenomenon of the current labor models occupying concurrent posts, participating in too many conferences and engaging in too many conferences and engaging in too many social activities. This will ensure that they have sufficient time at their disposal for production and at the same time strengthen their relations and contact with the masses. We must concretely solve the practical problems of the work burden of a portion of the labor models being too heavy, of their difficulties in finding adequate time for studies and making advanced studies as well as their individual problems of daily life. This will foster the growth of labor models. We must in a big way and practically and realistically propagate the advanced ideology and deeds of labor models. We must, by means of real hard work, enable thousands by thousands of workers and employees to continuously join the ranks of the advanced and strive for achieving the objective of making, in the next 3-5 years, the size of the contingents of truly qualified advanced producers much bigger, and their quality much better, than is the case today.

IV

Over the more than 30 years since the founding of the PRC, we have gathered and accumulated many valuable experiences in organizing the advanced producers movement and, at the same time, we have learned many painful and penetrating lessons. One of the important experiences gained is that in our work we must rigidly abide by the natural laws and economic laws. We must be practical and realistic no matter whether we are determining the emulating contents or targets or whether we are setting up advanced models or promoting advanced experiences. In our country, there are nearly 400,000 industrial and communications enterprise units. They differ in thousands of ways. In learning from the advanced and promoting advanced experiences, if we adopt or stick to one model or form, copy or apply mechanically, and bring compulsion to bear by means of the issuance of orders and directives, the consequence will only be setbacks in or failure of our advanced producers movement. Since the advanced producers movement is a gigantic undertaking participated in by millions of people, it simply won't do to have only a few people engaged in that work. Hence, we must be great in strength and impetus and, through all necessary means, mobilize and organize the vast masses of people. But we must also watch the actual results and be determined to avoid formalism. The way of doing things by raising a hue and cry, going in for ostentation and extravagance, and attending only to form has all along been hated and rejected by the vast masses of workers and employees. It must be firmly avoided and rectified.

We may also note that in our country at present conditions have become increasingly ripe for developing the advanced producers movement on an even larger scale than before. Since the 3d Plenary Session of the 11th CPC Central Committee, we have implemented a series of new and important guidelines and policies. This gigantic reform of historical significance has lasted for 4 years. It has demonstrated to people of the whole country not only its political achievements but also its material benefits. In fact, the actual standard of living of the great proportion of the workers by far has been improved to a certain extent and everybody is living more happily. The improvement in the material and cultural life of the vast masses of workers sooner or later will be reflected in their production work and more or less bring about an upsurge in their labor enthusiasm and creativeness. In recent years, we have done much work in the direction of reorganizing the leadership ranks of the enterprises, setting up the economic responsibility system and training workers and employees. In the enterprises, various kinds of management work such as quota control, business accounting and so on have been put on the right track. If we combine the above with other conditions, such as strengthening ideological and political work, we can entirely anticipate that there will emerge in our country an advanced producers movement of a gigantic scale which has the objective of building our country into a highly civilized and highly democratic socialist modern powerful nation. Within the working class, and within the entire population, an increasing number of people will strive to become advanced producers and more and more people will indeed become advanced producers. This in itself is an important symbol of the continuous elevation of our country's socialist spiritual civilization. The advanced producers movement will surely become an enormous force promoting the modernization of our country's industry, agriculture, national defense and science and technology and pushing forward the healthy development of the entire socialist undertaking.

THE PARTY'S CAUSE, THE PARTY'S WORK ON LITERATURE AND ART AND NONPARTY LITERARY AND ART WORKERS

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 33-36

[Article by Qi Fang [2058 2455]]

[Text] While talking about the two basic problems of audience, namely, the people for whom our works of literature and art are produced and the way to serve them, "Talks at the Yanan Forum on Literature and Art" specially discusses inner-party relations, namely, the relations between literary and art work of the party and the entire work of the party, and in addition, a problem of the party's external relations, namely, the relations between the party's work on literature and art and nonparty literary and art workers. For a considerably long period in the past, not many of our literary and art works specially discussed and analyzed Comrade Mao Zedong's views in this respect. The reason why we suffered setbacks and made deviations in our literary and art movement was closely attributed to our failure to pay attention and properly deal with this view. Therefore, to restudy such a view is an important subject for bringing order out of chaos on the literary and art front.

As proletarian revolutionaries, politicians and theoreticians, Comrades Lenin and Mao Zedong observed the problems of literature and art from the angle of the strategy and tactics of the entire proletarian revolutionary movement. They maintained that the proletarian literary and art movement should not be separated from the general track of the proletarian revolutionary movement and the Marxist and Leninist leadership of the party. With regard to Communist Party members who are engaged in literary and art undertakings, literature and art are their specific fighting posts at which they devote themselves to the proletarian revolutionary cause. First of all, party member literary and art workers should not forget that they are Communist Party members. They should implement the party's resolutions, guiding principles and policies and abide by the party's discipline. They should on no account regard their work as an individual thing which has nothing to do with the general cause of the proletariat. It was precisely in this sense that Lenin pointed out in his article "The Party's Organization and Publications": "The work of writing should be a part of the general cause of the proletariat."

Lenin's article, which was written for the party's newspaper, journal, publication and propaganda work, is, of course, suitable for the party's literary and art work. So far as literary and art undertaking are concerned, it raises and answers the problem of inner-party relationships, that is, the relations between the party's literary and art work and the party's entire cause on the one hand and the relations between party-member writers and the party's organizations on the other. Comrade Mao Zedong's "Talks" and other relevant works also carry forward Lenin's basic ideas on this subject. It is not in accord with the basic spirit of Lenin's article to regard Lenin's demands on party-member artists and writers as demands on all artists and writers. This would also cause serious consequences in practice.

Lenin's remarks "Writers without party spirit, get out!" referred to writers who had organizationally joined the party and all inner-party publication and propaganda workers, rather than nonparty writers and authors in general. After the October Revolution, while leading the struggle against the "proletarian cultural faction," Lenin mercilessly taunted the sectarian and closed door views which thought that the task of building proletarian culture could only be accomplished by relying on the efforts of the proletariat itself together with scientists, artists and engineers who were of proletarian origins. Lenin said that this was a wholesale fabrication. He explicitly pointed out: "In the activities in various fields, if we fail to form an alliance with nonparty personnel, we cannot begin to talk about successful communist construction." ("On the Significance of Combating Materialism")

While affirming that the party's literary and art work is part of the party's entire cause, Comrade Mao Zedong's "Talks" profoundly expounded the relations between the party's literary and art work and the nonparty literary and art work and regarded these party's external relations as a problem of a united front in the literary and art circles.

Our country's revolutionary literary and art movement is led by the party and attended by party member writers and artists. This gives rise to the relations between the party's literary and art workers and the party. Revolutionary literary and art undertaking is an extensive activity of the masses which is closely connected with almost every member of society. Apart from Communist Party members, it needs the participation of a number of literary and art workers who sympathize with and support the revolutionary cause to varying degrees and have different ideological tendencies and literary and art viewpoints. This gives rise to the problem of how our party should handle well its relations with nonparty literary and art workers, that is, the party's external relations. With regard to the party, this actually means how our party should exercise its correct leadership over literature and art and arouse the enthusiasm of all positive factors to promote the development of literary and art undertakings. Whether at the stage of democratic revolution or socialist revolution and construction, if the party fails to adopt correct policy to extensively cooperate with the masses outside the party, to fully arouse their enthusiasm and give play to their wisdom, talent and specialty, it is impossible to carry out the proletarian revolutionary literary and art movement in the true sense.

Handling well the relations between the party and nonparty literary and art workers is, very often, related to the party policy toward intellectuals. The broad masses of intellectuals in China are full of revolutionary spirit. Very often, they play a vanguard and linking role in the Chinese revolution. Comrade Mao Zedong attached full importance to the essential role played by intellectuals in the process of the Chinese revolution. In his article "Recruit Large Numbers of Intellectuals," Comrade Mao Zedong pointed out: "In the long and ruthless war of national liberation, in the great struggle to build a new China, the Communist Party must be good at winning intellectuals, for only in this way will it be able to organize great strength for the war of resistance, organize the millions of peasants, develop the revolutionary cultural movement and expand the revolutionary united front. Without the participation of the intellectuals victory in the revolution is impossible." If we fail to unite with nonparty literary and art workers, it is impossible for us to correctly implement policy toward intellectuals on the cultural front.

It was on the basis of such fundamental estimation and specific analysis that Comrade Mao Zedong expounded a series of policies and guiding principles for correctly handling the relations between the party and nonparty literary and art workers in the literary and art work. In his "Talks," he emphasized: "Our party writers and artists must: 1) unite on this issue of resistance against Japan with all nonparty writers and artists (ranging from party sympathizers and petty bourgeois writers and artists to all those writers and artists of the bourgeoisie and landlord classes who are in favor of resistance to Japan); 2) we should unite with them on the issue of democracy...; 3) we should unite with them with regard to the special issue of method and style in literature and art." With respect to the criterion for literary and art criticism, he again pointed out: "Subject to the general principle of unity of resistance against Japan, we should tolerate literary and art works with a variety of political attitudes," "our criticism ought to permit the free competition of all varieties of works of art." In the meantime, he stressed: "In a united front, all unity and no struggle and all struggle and no unity are both wrong policies--as with the right capitulationism and tailism, or the 'left' exclusivism and sectarianism, practiced by some comrades in the past. This is as true in literature and art as in politics." With regard to artistic works, Comrade Mao Zedong maintained that we should correctly appraise them according to artistic criterion in a scientific way. He said: "We must severely criticize and repudiate all works of literature and art expressing views in opposition to the nation, to science, to the masses and to the Communist Party." Here, Comrade Mao Zedong talked about the problem of united front and relations between the party and nonparty literary and art workers. On the literary and art front, the cooperation between the party and nonparty literary and art workers is not without principles. Instead, it is based on the common great objective (defending basic interests of the masses and the nation) and respecting artistic law. Instead of keeping on the right side of everyone, this cooperation is guided by Marxism and includes serious ideological struggle. However, to strive for the common great objective and artistic development, we should not set the criterion for party members on nonparty literary and art workers and implement a closed door policy toward them.

We should sincerely cooperate with them and bring their enthusiasm into full play.

Because Comrade Mao Zedong correctly handled the relations between the party and nonparty literary and art workers with respect to theoretical principles and specific policies and correctly cooperated with all possible allies in the literary and art circles, we made brilliant achievements in our revolutionary literary and art movement at the democratic revolutionary stage. On the eve of the founding of new China in 1949, the two great literary and art contingents from the KMT-ruled areas and the liberated areas successfully joined forces at the First National Congress of Literary and Art Workers, which marked an unprecedented and great unity of the Chinese literary and art movement. At that time, almost all well-known writers and artists (regardless of their schooling or world outlook) assembled together in the contingent of the cultural construction in new China led by the party. This was a wonderful and magnificent page in the history of our country's revolutionary literature and art. This was also a victory for the party policy for literature and art and a successful example of the united front work in literary and art circles.

Under the conditions that the proletariat has succeeded in snatching state power and becoming a national rural party, are Comrade Mao Zedong's ideas quoted above still valid? Do they still have guiding significance in practice?

The answer to these questions is in the affirmative.

After the proletariat has succeeded in snatching state power in the whole country, fundamental changes have taken place in class relationships and revolutionary tasks: The Chinese Communist Party has become a ruling party. With the accomplishment of the socialist reform of the ownership of the means of production, the exploiting class as a class has been eliminated and intellectuals, including literary and art workers, have become part of the laboring people and forces on which socialist construction relies. If we neglect or negate such historical changes and still use the old viewpoints to formulate our policy toward intellectuals, we are bound to commit grave mistakes. The fact that following the founding of new China, we suffered defeat in our guiding thought for literary and art work and committed "leftist" mistakes in discriminating against intellectuals was closely connected with our negligence of these basic changes.

The task and scope of the literary and art movement in the socialist period are greater than those of the left-wing literary and art movement and the art movement in the liberated area. The number of our writers and artists and the size of our literary and art contingent exceedingly surpass those made before the victory of the revolution. Despite the fact that the number of party members in the literary and art circles has increased by the dozens, they are still the majority in the literary and art contingent. We should not rely on party members alone in the literary and art circles to promote and develop socialist literature and art and build socialist spiritual civilization. On the contrary, we should, under the leadership of the party, unite with all nonparty literary and art workers who love socialism and the motherland to accomplish the task together.

Since the founding of new China, "leftist" mistakes occurred in the literary and art movement on several occasions. We unilaterally, mechanically and arbitrarily dealt with the relations between the party's literary and art work and the party's entire work, simply regarded literary and art creativity as a weapon for political propaganda and used political movement and struggle to solve the matter of right and wrong in the literary and art movement. Apart from that, the distinctions between the party and nonparty literary and art workers were obscured. In so doing, we weakened not only the mass foundation of literary and art work, but also the party's leadership over literature and art and ideological work. When such "leftist" ideology went to extremes, cultural autocracy and nihilism in the "Great Cultural Revolution" occurred. The Lin Biao and Jiang Qing counterrevolutionary cliques not only brutally attacked nonparty literary and art workers, but also treated a number of literary and art workers inside the party as enemies. The direct result brought about by such act was that in the literary field of a big country with a population of 1 billion, only a few "revolutionary writers" survived. In a civilized ancient country with a long history of 5,000 years, there were only 8 "model operas." On the other hand, the practice of the literary and art movement in our country following the founding of new China has also shown us that we should guard against another danger: If we give up necessary ideological struggle on the literary and art front and the leading role of Marxism in the ideological and cultural fields, underestimate the corrosion of the ideological influence of the old society and various bourgeois ideological trends from foreign countries and attach importance to unity alone without carrying out necessary ideological struggle, our actions will give rise to the bourgeois liberalization and the spread of bourgeois ideology. In so doing, Marxism will lose its ideological front and the socialist nature of the literary and art movement and its role in the socialist superstructure will also diminish.

In the new historical period, the conditions of the party organizations and party members in the literary and art contingent are matters of fundamental significance for upholding the orientation of the socialist literature and art, because we rely on them to implement the party's line, guiding principle and policies. Because party organizations in the literary and art contingent were sabotaged and weakened during the 10 years of internal disorder, the sense of responsibility to the party of some party-member literary and art workers has been dulled. This has become a major problem which adversely affects the healthy development of the literary and art movement. Therefore, we should stress that party organizations in the literary and art contingent should maintain their political and ideological purity and that party-member writers should strengthen their party spirit. All party members who are engaged in literary and art work should, first of all, realize that they are Communist Party members before they regard themselves as writers or artists. In this respect, all Communist Party members should do so without exception. In other words, all party-member literary and art workers should be bound not only by constitution and law, but also by the party's program and constitution. They should conscientiously abide by the party's discipline and implement the party's guiding principles, policies and resolutions. They should unequivocally keep in line politically with the CPC Central Committee, maintain the party's ideological and organizational purity and resolutely fight against all ideology and acts which run counter to the party's interests. They should not conceal their political features as Communist Party members and contaminate the communist banner. They should influence the masses around them with their own exemplary acts and excellent communist characters. They should neither lower the standard for themselves and slacken their efforts to set strict demands on themselves nor stand above the masses, separate themselves from the masses and consider themselves to be reformers. Writers enjoy freedom of literary and artistic creativity. However, party-member writers should not set their creative freedom against their duties as party members. The party has conferred full rights on them so that inside the party they can present their opinions to the party organizations or even the CPC Central Committee. Outside the party organizations, they are not allowed to make use of their social status as writers to express ideas and remarks which are not in accord with the party's principle or violate the party's line, guiding principles and policies. Party-member writers and artists should take part in the activities of "letting a hundred flowers blossom and a hundred schools of thought contend." However, they should take part in such activities as Communist Party members rather than as writers and artists in general. In the activities of letting a hundred schools of thought contend, they should expand the ideological front of Marxism, but not the opposite. If we fail to solve this problem, we will not be able to retain the socialist nature of the literary and art movement, ensure the party's leadership over literary and artistic undertaking or correctly arouse the enthusiasm of nonparty literary and art workers.

In the new historical period, the handling of the relations between the party and nonparty literary and art workers is actually a problem of how our party should correctly exercise its leadership over literary and art undertaking. To solve this problem, in-depth study and exploration are needed.

First, we should amply trust the majority of our literary and art workers. We should not regard them as alien forces or reject them because some of them have made certain mistakes and/or have shortcomings in certain respects. Otherwise, we will commit "leftist" mistakes. The fact that literary and art workers have become part of the laboring people does not mean that they have all become Marxists. This is also the case with workers and peasants who can also be influenced by nonproletarian and non-Marxist ideology. The main work we should do is that on the basis of trusting them, we should gradually guide, help and educate them.

Furthermore, we should realize that in the new historical period, the cooperation between the party and nonparty literary and art workers on the literary and art front is still very extensive. For instance, in our endeavor to realize the socialist modernization of the motherland and getting rid of poverty and backwardness, our literary and art workers have more common language. We are now facing the task of returning Taiwan to the motherland and of opposing imperialism and hegemonism. Under the slogan of uniting the motherland and reinvigorating China, we should not only arouse the enthusiasm of the broad masses of literary and art workers on the mainland, but also unite with all patriotic literary and art workers and artistic schools, including Taiwan compatriots, Hong Kong and Macao compatriots and Overseas Chinese to promote the prosperity, richness and colorfulness of our socialist literature and art.

What guiding principle and methods should we adopt to arouse the socialist enthusiasm of the broad masses of intellectuals, including literary and art workers? We should pursue the principle of distinguishing the two kinds of contradictions with different nature, including that of "letting a hundred flowers blossom and a hundred schools of thought contend." Comrade Mao Zedong regarded the "double hundred" policy as a principle for promoting and developing literary and artistic creation and sciences. To implement this policy, we should encourage works of various artistic styles and schools and various literary and art viewpoints to compare, contend, compete and argue with one another. This includes ideological struggle. The idea of regarding the "double hundred" policy as a practice devoid of criticism and struggle runs counter to the policy. Of course, it is harmful to adopt crude and repressive measures to deal with an ideological problem. We should learn to overcome various erroneous ideas by the method of persuasion and education.

Due to the sabotaging activities carried out by the "gang of four" in the ideological field and the attack of the bourgeois ideological, literary and artistic trends, our literary and art circles are faced not only with the task of continuing to fight against the pernicious influence of "leftist" mistakes, but also with the task of fighting against, to varying degrees, bourgeois liberalization. This problem not only exists inside the party, but also involves nonparty literary and art workers. In recent years, under the correct leadership of the CPC Central Committee, we have been carrying out an ideological struggle on the two fronts in the literary and art circles. While upholding the Marxist principle, we also help and educate the broad masses of literary and art workers and arouse their enthusiasm to the greatest possible extent. This is a successful practice for dealing with ideological struggle in the literary and art field. Summing up new experience in this respect is a matter of guiding significance for the development of the literary and art movement in the future.

MAKE GREAT EFFORTS TO FULLY UNDERSTAND THE ESSENCE OF THE DOCUMENTS AND SEEK IDEOLOGICAL UNITY

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 37-38

["Short" commentary]

[Text] There has already been massive enthusiasm throughout China in studying the documents of the 12th CPC National Congress. Everything points toward relatively clear and effective results as a consequence of the importance being attached to the documents by party members at every level in every region and the resultant enthusiasm to study the documents by cadres in general. Many cadres have seen their understanding and consciousness raised as well as their political enthusiasm.

In terms of the overall process, study has only just begun, profound study is still to follow. According to the plans of the party Central Committee, the first stage of study mainly concentrates on learning and grasping the spirit of the documents, elevating one's understanding and uniting ideology in the direction of the plans and policies laid down by the 12th CPC National Congress. The contents of the documents of the 12th congress are rich and abundant. It supports the principle integrating the universal truth of Marxism with the objective facts concerning China's present conditions so that through our study we can bring together the experiences we have gathered from socialist construction in China and produce a mass of new, correct policies and directions which will open up a new era in the socialist modernization construction program. Using our theories we can make clearer elucidations of Marxism, thereby embodying the new leap that the party is making in terms of understanding and appreciating the rules of China's socialist construction. The documents are the development of Maoism under new historical conditions and they represent the compass for all our future work. Only by fully and completely understanding and grasping the spirit of the documents is it possible to correctly initiate and implement our plans and our work and to avoid making mistakes. Thus, we must be earnest in our study of the documents, we must examine them closely and deeply and not be satisfied with only a superficial understanding. We must avoid anything which influences our full and thorough understanding of the documents, such as insufficient analysis of the documents or insufficient examination of the situation before drawing up work plans; deviation from the contents of the documents to discuss nothing but generalities; using supplementary reading material instead of the essence of the documents during study, and so forth. In the past, some cadres have made such mistakes as these, that is, they did not study the documents sufficiently and therefore were not able to grasp their essence, the result being that their behavior ran opposite to the spirit of the documents, causing them to make mistakes. We should remember this.

A full understanding of the spirit of the documents allows us to increase our understanding, seek ideological unity and guide our work. A key link here is to bring together ideology and reality, to make comparisons with the documents and overcome such thinking which does not correspond with the essence of the 12th congress documents. We must understand that by ignoring this step, it is impossible for the essence of the documents to truly take root in our minds. The documents of the 12th congress cleared up a series of problems which needed rectification in order to establish this new stage in the socialist modernization construction program. For example, it counteracted "leftist" tendencies as well as rightist tendencies; it clarified the tactical targets for socialist modernization construction; accumulated funds to carry out important construction work; developed many different economic styles and implemented the system of responsibility in management and administration; took the implementation of a planned economy as being of utmost importance and market readjustments as supplementary; outlined education and science as being the most important strategies for development of the economy; strengthened the education of communist ideology; established socialist spiritual civilization; successfully attacked corruption and crime in the economic, political and cultural spheres; restructured the system of leadership; and activated revolutionarism, youthfulness, expertise and perception among the cadre ranks. We all have our own opinions of these problems; some are correct, some are not so correct or accurate. Only on the basis of understanding the essence of the documents and carrying out intercadre discussions and meetings can we hope to unite our ideology and understanding.

Studying documents and uniting ideology represent a glorious tradition in our party, but during the 10 years of internal disorder, this tradition was severely damaged. The "gang of four" used unity of ideology as one of their means with the result that this present readvocation of the idea as a means of study has met with some doubt from some comrades. If this situation is not rectified, then we will be unable to continue our study work in any depth. Leaders on all levels should work hard to implement the unity of ideology and reality, such an important link in the chain, and in doing so bring about a restoration of one of the party's glorious study methods.

Understanding and grasping the essence of the documents, raising our appreciation and perception and unifying our ideology are all extremely important steps to be taken. Only by thoroughly carrying out this step can one go on to the next step involving the linking up of all this with the actual work situation in each individual region, department or work unit, collating and learning from experience and examining and implementing the measures and plans outlined in the essence of the 12th CPC National Congress.

The key to carrying out deeper study lies in strengthening leadership. Now, we should take a look at the study process, at the understanding of the essence of the documents, the linking of ideology and reality, the unification of our understanding with the demands of the essence of the 12th CPC National Congress and ask ourselves how well were these things carried out? What experiences have been gained from doing so? What problems exist? How can we improve things? And so forth.

Our first major task today is to study the 12th congress documents. This then demands that we have a concrete order to our work, that we ensure definite work periods and that we ensure that the cadres study in earnest. We should not consider our task of studying the congress documents as something outside our work. Studying the party line, policies and direction is itself our work and is indeed the very first part of any of our work. Linking this with the workers must first be seen in terms of a blueprint. The tactical program drawn up in the documents until the end of this century are a great blueprint for work and only by first studying it carefully can we arduously struggle to construct the great modernized tower of socialism with clear direction, great determination, correct methodology and awareness.

IS THE PRACTICE OF DISTRIBUTION ACCORDING TO WORK CONTRADICTORY TO THE PROMOTION OF A COMMUNIST WORK ATTITUDE?

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 38-40

[Article by Xue Yan [5641 1693]]

[Text] In their study of the 12th national congress reports, some comrades made the point that on the one hand they were carrying out policies of distribution according to work while on the other hand advocating a communist attitude toward work and were these two policies not contradictory? How should we come to understand this problem?

Distribution according to work is socialism's distribution principle. It sets out that everyone receives remuneration according to the quantity and quality of their own work, so that more work produces more pay and less work produces less pay while no work produces no pay. A communist attitude toward work means carrying out work of one's own free will regardless of quotas or remuneration. Both of these two concepts are very different but both are vital to this present stage we find ourselves in. A correct handling of the relations between these two concepts is of great significance to the promotion of the socialist modernized construction program.

Distribution relations in society are decided by the situation relating to the means of production. In a capitalist society where the means of production are privately owned, the exploitive classes rely on the means of production that they own to exploit the surplus labor of the workers and thus pass their days earning money but without having to work while, at the same time, the workers are economically exploited and politically suppressed. In a socialist society the workers are the masters of the state. Under conditions of socialist public ownership of the means of production, the people have equal rights of possession of the means of production and distribution of consumer products is carried out according to the principle of distribution according to work. This is the greatest advance in history ever made by human societies. Although the communist principle of distribution according to need continues to develop and become more ideal it can only be truly achieved in a communist society with a highly developed productive force, and with a population with a highly developed consciousness. During the stage of socialism it is only possible to implement distribution according to work. As far as China's present situation is concerned, industrious implementation of the principles of distribution according to work is today still a problem which has not been completely solved whether it be in the industrial sector, the agricultural sector or any other sector and it thus still requires active and concentrated work. There is still a great deal of work to be done including the structuring of the system of economic management. Correct implementation of the principles of distribution according to work allows us to actually see and feel material benefits in the process of constructing socialism, so that as production develops so too do our individual contributions to the cause and thus, at the same time, the standards of living both materially and culturally gradually improve for everyone, thereby activating everyone's enthusiasm to construct socialism and to work even harder for society and also promoting the ever faster development of the productive forces as well as technology and culture. This is a question of essential importance to the construction of socialism.

While distribution according to work is socialism's distribution principle, it is also an objective rule for the development of socialist economics. We must recognize it, take advantage of it but on no account abuse it or destroy it otherwise we just accept punishment. We all still remember how in 1958 some comrades, under the guidance of mistaken "leftist" thinking, went against the principles of distribution according to work subjectively believing they could hasten the advent of communism in this way by blowing "the wind of communism" and eating "the largest portions of rice." The result was serious damage to production, while people's living standards were also seriously affected. During the 10 years of social chaos, "leftist" tendencies and mistakes reached their pinnacle with the result that not only was distribution according to work no longer conscientiously practiced, it was also criticized so that the end result was serious damage to the workers' enthusiasm and the creating of one of the main factors blocking the development of the economy. These experiences should not be forgotten.

Why, then, in this stage of socialism is the communist attitude toward labor again being advocated?

1. A socialist society represents the initial stage of communism with society's basic means of production already under public ownership and with society already having produced common benefits for all. Thus, a significant portion of the work advocated for socialist workers is for society. This portion of work must be deducted and is dissimilar to that in other societies and is designed to consolidate and develop the system of public ownership of the means of production as well as fulfilling the demands of common benefits and long-term benefits. For these reasons, therefore, it contains elements of communist labor. As far as society's total line of products is concerned, what products should be included in this portion of labor? In his "Critique of Gothe's Program" Marx discussed the question of distribution during the primary stage of communism and listed the following few items. The portion of labor which goes toward making up for means of production lost in consumption--if that portion is not deducted then even simple reproduction in society cannot be maintained.

The portion of labor added to increase production; the portion used to pay for foreseen mishaps; general management costs not directly related to production; the portion used to satisfy common needs, such as schools and health facilities; these accurate divisions drawn up by Marx were developed by taking an objective look at the real situation and carrying out theoretical analysis of future societies. If we integrate the practicalities of the communist movement and China's present social situation, then we can see that there is still a portion of China's products which must be seen as national defense costs. Only after deducting these can society distribute the means of subsistence according to the quantity of work preferred by each worker. Obviously, socialist workers should not work merely to receive their money, in addition they should have a concrete communist attitude toward labor and they should work with enthusiasm for socialist production as well as the above few items so closely connected to common benefits. Otherwise, not only will the socialist society be unable to progress and develop, it will also no longer be able to exist.

2. As far as advocating a communist attitude toward labor is concerned, there are several questions of significance worth asking. One is the question of how a socialist worker should treat his own work tasks and the other is what level of consciousness a worker should have. The principles of distribution of consumer products can only be achieved according to the principles of distribution according to work, but all workers would say there should be no adoption of such attitudes as "work according to pay," "work only as much as the pay is worth" and so on. The reasons for this are that since the workers are already the masters of their society, work is both for the society and oneself, regardless of whether it is paid or unpaid work. This is totally different from the capitalist and master/worker type work of the old society. Every worker must fully appreciate his or her position. Of course, this communist attitude toward work that is being advocated is not mainly designed to promote unpaid work, but instead, is most importantly demanding that everyone take full responsibility for their own work and constantly keep improving themselves. Practical experience shows that if when we practice distribution according to labor we only concern ourselves with how much money we get for how much work, then, without carrying out any ideological and political work and without advocating the principles of a communist attitude toward labor, it is very easy to go astray and produce tendencies of concerning ourselves solely with money. In his report to the 12th national congress, Comrade Hu Yaobang said: "If, under the guidance of communist ideology, we ignore this great task of constructing socialist spiritual civilization throughout society, then the people's understanding and perception of socialism will become one-sided with the result that the people's attention will only be drawn to the construction of a material civilization or even only to the search for material benefits. If this happens, our modernized construction will no longer be able to guarantee a socialist direction with the result that our socialist society will lose its ideals and its targets as well as the force of its spirit and its fighting will, with the result that it will not be able to resist corruption by many corrosive factors and may even see lopsided development or deterioration."

By educating the masses with communism, it will even be easier to implement policies of distribution according to labor and solve the contradictions between distribution according to work and the communist attitude toward work. We already have many examples of this having taken place in our present-day life. Such advanced and developed people as Lei Feng, Wang Jie, Qiao Yulu and Zhao Qune represent models for the correct resolution of this kind of contradiction. They were able to carry out their work and the labor for both the party and the people and they gave their all until the end. They are exemplary figures who displayed a communist attitude toward work.

China has already had 30 years of socialist public ownership of the means of production and after a long period of education the masses are gradually beginning to establish a philosophy of being masters of their world and as a result we are achieving great victories for socialist construction. Nevertheless, we must remember that because of new increase in the composition of the workers as well as the destructive effect of the 10 years of social disorder and various weaknesses in our present work, there still exists today a not insignificant number of people who do lack the philosophy of being masters of their own society and who lack a communist attitude toward work. Some people continue to enjoy the great benefits provided as a result of the socialist public ownership of the means of production without putting any effort into working or laboring for socialism, indeed some even loaf around at work and do nothing. In our present work of educating the masses in correct communist ideology we must stress the importance of learning how to be masters of their society in line with the socialist public ownership of the means of production. Undergoing this kind of education will make the working classes and other workers come to understand the historical duty they are to bear and thus give full expression to the advantages of the socialist system.

Teaching cadres and the masses to adopt a communist attitude toward work is a long-term process, but as far as Communist Party members are concerned it is a very immediate problem. In his report to the 12th CPC National Congress, Hu Yaobang said: "Of course we cannot expect every member of society to become a communist, but we must make use of communist ideology to aim at Communist Party members, CYL members and all advanced members of society and through them educate and influence the masses." As far as a true and correct communist is concerned, he or she should not by any means be a revolutionary only for the sake of distribution according to work. A Communist Party member should on the one hand work hard to implement party policies, such as distribution according to work, but on the other hand he or she should not on any account make distribution according to work a final and advanced target or aim. In this way their work and their labors will not be completely money oriented but will be selfless and altruistic, making the benefits of the party and the people the most important thing to work for. When contradictions arise between individual interests and those of the state or between short-term and long-term interests, then these people will be able to consciously subordinate individual interests to those of the state and subordinate short-term interests to those of a long-term nature and even, should it come to it, sacrifice themselves for the cause, even to the extent of giving their lives. Only in this way can we hope to activate the masses and promote the development of the socialist modernized construction program and move onward toward our glorious aim of communism.

WHY IS IT NECESSARY TO CARRY OUT COMMUNIST IDEOLOGICAL EDUCATION AT THE SOCIALIST STAGE?

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 41-43

[Article by An Tung [1344 0681]]

[Text] In his report to the 12th CPC National Congress, Comrade Hu Yaobang proposed: "At the present stage, we must adhere to the system of to each according to one's work and to all socialist principles. Of course, we cannot wish everyone to be a communist, but we must measure CPC members, CYL members and all advanced elements by communist ideological standards, and through them, educate and influence the broad masses."

Viewed from the angle of the socialist economic system or from the angle of the socialist political structure, there is a major difference between China's socialist system and the past private ownership system. China's socialist system is a product under the guidance of the communist ideological system. It has to be gradually improved in practice. However, it will undoubtedly lead China's society into the advanced stage of communism. Although for many years some Communist Party members have been doing the specific work of the socialist and communist cause, have been practicing communist ideology in action, have been living in the communist movement and have been facing the increasing communist factors, they do not consciously or not too consciously understand the communist nature of our cause. Under such circumstances, although they work faithfully and diligently, it is often difficult for them to do a good job in their work, in particular it is difficult for them to meet the increasing requirements in socialist modernization. Some comrades shoulder the heavy responsibilities entrusted by the party and the people, but they think that the present policies and work have nothing to do with communism. When we emphasize that we must carry out communist ideological education, they feel strange and are upset. They even think that it is queer to carry out communist ideological education in the course of building socialism. Such a phenomenon shows that it is a pressing task to educate party members, particularly leading cadres at all levels, to understand well the communist nature of our cause in the course of socialist modernization, to always remember guidance concerning the communist ideological system and to always remember the great aim of communism.

Some comrades are worried that the "leftist" erroneous tendency will emerge again and that the "communist wind" will prevail again, as did in 1958. In particular, they are afraid that the country will be plunged into the fallacy of communism which was practiced by Lin Biao and Jiang Qing counter-revolutionary cliques during the "Cultural Revolution." In order to dispel such misgivings, it is necessary for us to seriously review the history of the party and the situation since the 3d Plenary Session of the 11th CPC Central Committee. Everyone knows that we have corrected the mistakes of the "Cultural Revolution," that we have corrected the past "leftist" erroneous tendency, that we have completed the task of bringing order out of chaos in our guiding thinking, that we have achieved the great victory of bringing order out of chaos in our practical work on various fronts and that we have worked out and implemented a Marxist line and a series of principles and policies to guarantee that our country's socialist construction will go forward along a correct road. Battling for the realization of communism is the duty and job of all communists. We should hold high the banner of communism. But it does not mean practicing a "leftist" erroneous line. Now we can see more and more clearly that not only was the "leftist" erroneous tendency not the product of the communist ideological system, but on the contrary, that it was the result of violating the communist ideological system. The purpose of emphasizing the carrying out of communist ideological education and of arming all the party members and the people of all nationalities throughout the country with communist ideology is, in the light of specific conditions and under the guidance of the communist ideological system, to resolutely implement all the present socialist policies and to conscientiously understand the relationship between our present work and the great aim of communism. In addition, this also enables us to constantly overcome and correct the erroneous tendency that distorts, from various aspects and in various manners, communist ideology and the party's principles and policies. It not only opposes bourgeois liberalization and prevents Communist Party members from being corrupted by the decadent capitalist ideology, but also opposes an ossified way of thinking and prevents any "leftist" erroneous line from emerging.

History is a kind of connection, an objective course which has its own internal law. The wisdom of communists lies in the fact that they can use Marxism, which is the most scientific and the most revolutionary ideology, to observe and tackle problems and that they can do practical work together with the people with a firm belief for the future and in the great spirit of historical optimism to bring our society toward the predicted goal. They are the conscious creators of history. Our party's line and all its various principles and policies are the products of correctly understanding China's situation under the guidance of the communist ideological system, and they can only be correctly understood and implemented under that guidance. In his opening speech delivered to the 12th CPC National Congress, Comrade Deng Xiaoping said: "The line put forward by the 8th CPC National Congress was correct. But at that time, the party was not sufficiently mentally prepared for overall socialist construction, and the line and many correct suggestions put forward by the 8th CPC National Congress could not be persistently carried out in practice." This was directly related to our being unable to understand and handle well the various problems in socialist construction under the guidance of the communist ideological system. The results of the implementation of the correct line, principles and policies in different regions, departments and units are often greatly different, some are even different to what is expected. One important reason is that communist ideology in the minds of some leading cadres is not firm enough and that they do not adopt a serious attitude with regard to the party's line, principles and policies.

The reason why the social policies formulated by the party at a certain historical stage are correct is that these policies are in line with actual conditions; at the same time, they also promote the development of our cause toward the communist goal. So long as the social status of a policy in a certain historical period is not fundamentally changed, such a policy must be continued so as to maintain relative stability. We must understand the relationship between each stage of the communist movement and its various stages from a high plane of the whole course of the historical development of such a movement. Only in this way, can we implement well policies which are suited to the actual conditions of a certain historical stage, and can we implement well policies which are suited to a new historical stage when the situation fundamentally changes and history enters a new stage. Only in this way can we have an overall understanding of the present policies, see that we must conscientiously implement the policies for a fairly long time to come and realize that by comparing with the final target of communists, the stability of policies is necessary and relative. Only in this way can we always remember the great target and highest ideal of communists and avoid becoming short-sighted persons who rest content with the present situation. For instance, the policy of to each according to his work is a social policy our party must adhere to and gradually perfect during the socialist period. Communist Party members should become models who can guarantee the implementation of this policy. If we do not implement the policy of to each according to his work, we will not be able to realize the tasks set by the party for the socialist period, and only by resolutely implementing this policy can socialist construction develop healthily and can the necessary social conditions be created for the future implementation of the policy of to each according to his needs. On the other hand, Communist Party members must do their work without thinking too much about remuneration. They must, in the communist spirit, handle well various social problems and social contradictions which cannot be appropriately solved by merely implementing the policy of to each according to his work. At the present stage, like safeguarding the policy of to each according to his work, this is the need for the people's interests, as well as the need for historical development.

In the final analysis, what should we rely on to bring into play the people's initiative for carrying out socialist modernization? Some people say that we should rely on material incentives, bonuses and "material benefit." Material incentives, including bonuses, can, to a certain extent, bring the people's initiative into play, so long as it is applied in a correct manner. In enabling the people to consistently maintain a high level of initiative and in giving such initiative a correct direction, obviously, it will not do just to rely on material incentives. Material living conditions and material production are the prerequisite to the existence of human beings. But the life and production of a society or of an individual have never been without purpose, they must have a certain ideal as their spiritual mainstay. In material life and material production, the people always gradually form their appraisal and attitude with regard to actual social life and social productive activities and thus form their social ideals. Correct ideology and beautiful ideals are not only the indispensable part of the people's social life, but also guarantee that the people's social life can develop healthily and guarantee that the level of social material production keeps rising. Communist theory correctly explains the people's material life and material productive activities. Therefore only if we are under its guidance can we understand and handle the problem of material benefit, set a lofty target for our life and understand well the present social value and its historical significance, and obtain the greatest encouragement. Only communist ideals can make us fear neither hardship nor setbacks and enable us to maintain full enthusiasm and the confidence to be successful in our revolutionary cause. When necessary one must sacrifice one's life without any hesitation. The reason why we emphasize the necessity for bringing the people's initiative into play by carrying out communist ideological education is that within the sphere of the whole society, we will enable the people to have a communist work attitude, social relations based on love and unity and the noble character of wholehearted dedication to the people's cause so as to bring forward the smooth development of our socialist modernization and to meet in a better manner the daily increasing needs for material and cultural life of all the members of society.

Energetically carrying out communist ideological education in the course of socialist modernization is a motive force for bringing the people's initiative into full play, as well as a motive force for victoriously developing our cause. With this motive force, our cause will certainly have a bright future and unlimited prospects.

WHY MUST PLANS OF A MANDATORY NATURE BE ENFORCED WITH REGARD TO IMPORTANT PRODUCTS AND KEY ENTERPRISES?

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 43-44

[Article by Zhao Mu [0340 3663]]

[Text] Plans of a mandatory nature are those which have a binding force and are transmitted by the state to the lower levels. They are worked out by the state's planning departments and are transmitted to enterprises and departments, which should seriously execute them and complete them as scheduled. They are an important form of planned management of the national economy in a socialist state through the conscious implementation of economic principles.

In view of the actual situation of our planned economy, plans of a mandatory nature should be enforced with regard to the production and distribution of production means and means of subsistence which are vital to the state-owned economy, in particular key enterprises which are vital to the entire economy. This is an important reflection of the organization and management of production in socialist ownership by the whole people. Under the ownership by the whole people, the production means and products of enterprises do not belong to the enterprises, but to the state, which represents the entire nation. The state is the organizer and leader of the economic system of ownership by the whole people. Based on existing resources and productivity, and on the objective demand for various scales of socialized mass production, the state coordinates and directs the economic activities of enterprises under the ownership by the whole people through state plans. At the same time, a certain amount of independence and autonomy are given to such enterprises. These enterprises are not the independent owners of production means, but economic units which are under the state and enjoy a certain autonomy. They have the responsibility and obligation to carry out mandatory plans transmitted by the state. Only in this way can the completion of state plans and the state's control over the production means and products of state-run enterprises be ensured.

The fact that plans of a mandatory nature must be enforced with regard to important products and key enterprises which are vital to the state-owned economy is a prerequisite for the successful development of the entire national economy. Why?

Socialist economy is a planned economy. The execution of mandatory plans is the main body of the planned economy. The adherence to mandatory plans is the key to the adherence to the planned economy. State-owned economy plays a leading role in the national economy. Because of their significance and production value, products under mandatory plans constitute a major portion of the national economy although they only constitute a small portion in terms of variety. Mandatory plans ensure the state's control of the entire economy and the production and supply of key industrial raw materials, facilities, energy and basic necessities, so that the basic stability of market and price can be maintained and chaos in the whole of economic life can be avoided. Plans of a mandatory nature constitute a restriction over the economic activities of enterprises. At the same time, they serve as an assurance, for they provide the enterprises with key facilities, raw materials, energy and external conditions for the sale of products.

Through mandatory plans, the state directly adjusts the main body of social production, ensures that key constructions and urgent social needs are provided with vital industrial raw materials and energy, increases short-term products and put restrictions on long-term ones, so that proportion and balance among departments can be maintained. Under circumstances in which prices are unreasonable and basic readjustment is impossible in the short run, the effect of mandatory plans becomes more significant. Enterprises' partial and immediate interests are often in contradiction with the state's overall and long-term interests. Mandatory plans are often required to resolve such contradictions. They can directly reflect the objective demands of basic socialist economic principles and those of the principles of planned development. Cancelling or diminishing the necessary realm of mandatory plans will give rise to blind and repetitive construction and production, incur loss and affect economic development.

The enforcement of mandatory plans brings the efficiency of guiding plans into full play so that under the condition that planned economy takes the lead, they help regulate the market, thus serving as an effective supplement to the planned economy. In the past we one-sidedly emphasized mandatory plans, doing so strictly and excessively that we neglected the effect of economic lever and market regulation. This was one of the causes of drawbacks such as production being out of line with demand and poor economic results in enterprises. The economic system reform under way also aims to work out a solution to this problem. In his report made at the 12th CPC Congress, Comrade Hu Yaobang pointed out that, apart from plans of a mandatory nature, economic levers would primarily be applied to quite a few products and enterprises, to ensure the implementation of guiding plans. The production of various minor commodities would be freely arranged by enterprises in accordance with changes in supply and demand. Since these three forms of management are in harmony with the level of our productivity and the coexistence of various economic forms, they should be combined organically so that each has a role to play. In this way our economic development will be concentrated, united, flexible and multifarious. Basing on experience gained in the fifties, the fact that the state is in control of the economic lifelines, leading the planned production and circulation of major industrial and agricultural products and the free production and circulation of minor ones is a prerequisite for the prevention of overall economic confusion.

Staple food, cotton, oil and other major agricultural by-products are basic necessities for major industrial raw materials and for the people in cities and rural areas. Due to our huge population, insufficient arable land and backward agricultural production, such agricultural by-products are always in acute shortage. The state should, therefore, set some mandatory targets for collective ownership economy, to ensure that the state is in possession of considerable amount of grain and other major agricultural by-products to satisfy the needs for national construction and the people's livelihood. The collective economy in the rural areas is collective ownership by the laboring masses who have the right to freely utilize their own production means and to distribute their own products. The state should respect the autonomy of units under collective ownership and of the peasants. It should, however, ensure that the interests of such units and peasants are basically in harmony with those of the masses. The development of national construction and the economic development of ownership by the entire people will benefit the agricultural population. Therefore, the state should respect the autonomy of the collective economic units and should also set mandatory targets for the purchase and distribution of staple foods and other major agricultural by-products. Consequently, not only the urban residents but also the masses of peasants will be benefited.

HOW DO WE CARRY OUT THEORETICAL STUDY AND EXAMINATION?

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 45-46

[Article by the Propaganda Department of the Jiangxi Provincial CPC Committee]

> [Text] Editor's note: The decision of the CPC Central Committee and the State Council on educational work among cadres in party and government organizations points out that in the future, the employment and promotion of the cadres must mainly be based on their record of formal schooling and their academic success. Therefore it is necessary to set up a checking and examination system for cadres, study and include their study achievements in their personal files. An important aspect of cadres' education is Marxist theoretical education. In order to set up an examination system for theoretical study, it is imperative to actively carry out study and research and constantly sum up experiences. Over the past few years, examinations have been carried out in a number of places to check on cadres' study of economic theory. Facts prove that such examinations are beneficial to promoting cadres' theoretical study. As a reference, we publish below the experiences gained by Jiangxi Province in its organization of examination in theoretical study.

In July last year we carried out an examination in economic theory for the members of the study groups of the standing committee of prefectural and municipal party committees across the province, and cadres above deputy department head level in the provincial government departments and institutes of higher learning. The contents of the examination were the "study of Marxist theory of reproduction" and a book on economic theory written by Comrade Chen Yun. It was a written examination. The subjects and time of the examination and the correction of examination papers were coordinated by the propaganda department of the provincial party committee. With the exception of a few cadres who could not attend the examination due to their work, sickness or absence on official business, a total of more than 1,600 leading cadres joined the examination, representing 93.3 percent of those who should have attended. At the same time, many leading comrades from county party committees also took part in the examinations organized by the propaganda departments of prefectural and municipal party committees.

The examination was held on a sweltering summer day. The cadres sat the examination with the positive, and serious attitude of primary school pupils. Sweating, they answered the questions conscientiously. Some joined the examination straight after returning from other places, while others joined the examination even though they were not yet fully recovered from illness. Some veteran Red Army cadres also took part in the examination though they were very old and weak. They thus showed a high degree of consciousness.

The results of the examination showed that most of the cadres had grasped or understood the basic principles of the theory of reproduction and the basic viewpoints and proposals on socialist economic construction in our country expounded in Comrade Chen Yun's work on economic theory. A number of comrades were able to explain some questions from the point of view of theory and practice by relating them to their own work and the lessons they have learned from the experiences of our economic construction since the founding of new China. Some put forward original views. The cadres and their units have been informed of the results of the examination and we have also decided to transfer these results to organization departments as a preparation for setting up the files on cadres' study.

The examination has excited strong response among cadres and in society. The whole period of revision and examination was characterized by an atmosphere of intense study, and the examination questions became a main topic of conversation. Such a situation proved that the examination was a good way of checking on the results of study; it is also an important link in doing a good job of theoretical study among cadres.

The following are our methods and experiences in organizing the examination in theoretical study:

1. Unify thinking and fully realize the significance and role of the examination.

There are different views as to whether it is necessary to carry out examinations in cadres' theoretical study. Some oppose the examination on the grounds that it is just a formality. We hold that such view is wrong. The CPC Central Committee has reiterated the importance of stepping up cadres' theoretical education. The CPC Central Committee also suggested gradually setting up an examination system for cadres' study, include the results of the examinations in cadres' files and take the results as a criterion in employing cadres. These results will no doubt play an active role in changing the situation in which it is considered of no consequence whether, or how much, one studies.

Some others hold that theoretical study mainly depends on one's consciousness and not on "pressure." This view needs analyzing. It is true that the examination exerts some "pressure," but if such "pressure" is properly used, it will become a "motive force" enabling the broad masses of cadres to study consciously. Consciousness in study is not innate, it has to be constantly raised in the practice of study and through gaining deeper understanding of the importance of theoretical study. For example, previously, some comrades held that the theory of reproduction expounded in "Das Kapital" Vol I may not be useful today because it was written by Marx more than 100 years ago. But when they took part in study and began to go into the question, their understanding changed and they even began to feel "regret" that they hadn't studied the theory of reproduction earlier. Many comrades said that in general they had the following experiences in their theoretical study: They were baffled the first time, had their ideas straightened out the second time and became interested the third time. If there was no "pressure" when cadres were baffled by their study, they might have been satisfied with gaining a smattering of knowledge but there would be no "interest" in study and consequently no way of raising their consciousness. It is evident, therefore, that examinations are necessary, to exert a certain "pressure" and promote cadres' theoretical study.

In fact, the majority of the cadres supported the examination. In particular, those comrades who paid attention to theoretical study, and scored higher achievements generally, were very eager to sit the examination. All comrades held that in the whole process of theoretical study it is necessary, after completing the study of a subject, or having reached a certain stage, to review, examine and consolidate the results of the study so as to sum up experiences and carry out new study tasks.

2. Clearly define the purpose of the examination and grasp well pre-examination revision.

In organizing study and examination, it is important to have a definite purpose. The purpose of the examination is to check the results of the study and promote it. In order to reach this goal, it is imperative to do a good job of pre-examination review.

The examination was announced 3 months in advance, and the contents and methods of the examination and the qualifications for sitting it were also clearly defined. A total of 27 subjects for consideration during reviewing period were printed and distributed across the province and these subjects were based on the main contents of the above-mentioned two books and particularly on the basic principles and viewpoints to be grasped. After reviewing the subjects for consideration, the various units concerned made definite arrangements for their cadres to study the subjects systematically. This review was useful in making up gaps in the study and consolidating and expanding its achievements. Reaction from various places showed that through review, cadres have been able to systematically understand and digest what they have studied sporadically in a year and to understand the questions that they did not or did not completely understand previously. The review was really effective.

3. Organize the first examination meticulously and carefully.

It was the first time we had organized such a provincewide examination. With a spirit of organizing the first examination meticulously and carefully, examination leading groups have been formed in the propaganda department of the provincial party committee and the party committees of the provincial government departments, while some comrades have been formed into a working group to be responsible for working out subjects for the examination, correcting examination papers and doing propaganda work. A meeting was also held for the secretaries of the study groups of the standing committees of the prefectural and municipal party committees to study the matter of the examination and other concrete questions and define the methods for solving some common problems.

An important question in organizing examinations properly is to work out the subjects for an examination according to the features and study level of the candidates. The candidates of this examination were leading cadres; most are quite old and not in particularly good physical condition, while their cultural levels are far from balanced. They were carrying out their study while working, and in fact only spent 1 month on study. Accordingly, we set several rules and regulations for defining examination subjects: 1) Many types of questions. We defined five question types for the examination: filling in the blanks; judging; answering questions; exposition; additional questions. Many questions only required short answers. 2) A proper degree of difficulty. The contents of the former three subject groups are about basic concepts and basic principles and were not difficult to answer if the candidates carried out their study and review conscientiously. The fourth group was relatively difficult and could only be answered by combining the understanding of the two books. The fifth group, that is the additional questions, required cadres to write their own experience, by combining theory with practice, from the point of view of whichever basic principle or main view they were most familiar with. This group was for those with higher level to "show their full ability," and this group gave us an idea of the breadth and depth of their study. 3) The questions emphasize basic concepts, basic principles and their use. We did not work out overdifficult or odd questions, nor did we work out questions which are still under discussion in theoretical circles or which require mathematics. 4) The number of questions was based on ordinary writing speed such that all of them could be completed in 2 1/2 hours (the time given for the examination was 3 hours).

After the examination, the candidates expressed satisfaction with the questions while the results of the examination were not far from what we expected. Contrary to our expectations, more than 70 percent of the attendants completed the additional questions.

4. The party committee pays attention and the leaders take the lead.

The results of the examination were satisfactory thanks to the attention and support of the provincial party committee prefectural and municipal party committees and the party organizations of the various units of the provincial government and leading comrades at all levels who took the lead in the study.

The provincial party committee supported our decision to hold the examination. Prefectural and municipal party committees and leading comrades of various provincial government departments also paid great attention to the examination. Many units held special meetings to check the situation of study and work out revision plans. Effective measures were taken to supplement the study and revision so as to ensure that the majority of the cadres could sit the examination and gain better results. Fuzhou prefectural party committee decided to join the provincial regular and unified examination and consequently it arranged a certain time for reviewing even though the prefecture was at the time seriously hit by floods and was busily engaged in relief work. Senior leading comrades of Zhangzhou prefectural party committee and two other leading comrades had official duty on the day of the examination; consequently they sat the examination at 8:11 pm that day. Some provincial government departments were having meetings that day, so the leadership made special arrangements and sat the examination before they began their own meetings. Without the attention of the party committees at various levels and support from leading comrades, it would not have been possible for the examination to draw so many cadres and achieve such good results.

The examination is our trial project for setting up a system for cadres' official theoretical study, and there were a number of shortcomings to this work due to the lack of experience. We will continue to spare no efforts and in the process of studying the documents of the 12th party congress, we will gradually set up and perfect the cadres' study and examination system so as to promote cadres' theoretical study in our province.

IN STUDYING THE 12TH PARTY CONGRESS WE MUST GET FIRMLY TO GRIPS WITH ITS BASIC SPIRIT

Beijing RED FLAG in Chinese No 22, 16 Nov 82 p 47

[Article by Li Ping [3810 1627]; reprinted from Sichuan's XUEXI [STUDY] magazine, No 4, 1982]

[Text] In the report delivered by the CPC Central Committee to the Central Propaganda Department entitled "Arranging the Study and Dissemination of the Documents of the 12th National Congress of the CPC," it was stated that in his opening speech to the 12th national congress, Comrade Deng Xiaoping gave an overall clarification of the historical position of the 12th national congress, the tasks of the congress and the essence of the documents of the 12th national congress. All levels of the party committee should use this opening speech as their guiding ideology and get fully to grips with studying and disseminating of the documents of the 12th national congress and studiously organize their implementation. This general guiding ideology provided by the Central Committee points us in an extremely clear direction in our organization of the study and dissemination of the party's 12th national congress documents.

The party's 12th national congress documents represent shining examples of Marxist literature, rich and profound in content and crystallizing the assimilation of historical experience and the collective knowledge of the party. In his opening speech, Deng Xiaoping stressed that "our modernized construction must be carried out with China's present actual situation in mind," "to construct socialism of a Chinese nature," "and we must rely on the strength of the Chinese people in order to carry out our work," "and cherish our rights of independence and initiative which we have struggled so long to gain. No foreign country may ever try and make China their vassal, nor should they imagine that China shall eat any bitter fruit which would damage the national interests of our country." While stressing his support for China's open door policy he went on to say that we must "continue to resist the corruption resulting from decadent foreign ideology and on no account should we permit the spreading of bourgeois life styles in China." We must gain a profound comprehension of the essence of this speech and diligently propagate it, to stimulate an enormous increase in patriotic fervor throughout the party and the masses. In his opening speech, after clarifying the three major tasks of the people during the 1980's, Deng

Xiaoping listed the four items of work which must, as of today, be tackled immediately by the entire party for a long time to come; namely, to carry out restructuring of mechanization and of the economic system: implement revolutionarism, youthfulness, increased knowledge and expertise amongst cadre groups; establish a socialist spiritual civilization; crack down on and break up antisocialist corruption and crime in the economic and other sectors; on the basis of thorough study of the new party constitution reorganize party style and organization. These are the most important guarantees of our support for the socialist direction and the joining together of our forces to carry out modernized construction. The general outline of the basic essence of the 12th national congress documents also states that it is under the guidance of communist ideology that we support the socialist direction and join together our force to carry out modernized construction and get firmly to grips with the four major items of work. The full documents and all the activities of the 12th national congress completely embody this point and in our study and dissemination of the documents of the 12th national congress it is vital that we fully grasp its fundamental essence.

RAISE THE COMMUNIST SPIRIT, STUDY WELL THE 12TH PARTY CONGRESS DOCUMENTS

Beijing RED FLAG in Chinese No 22, 16 Nov 82 pp 47-48

[Commentator's article by XIN CHANGZHENG--from Jilin's XIN CHANGZHENG [NEW LONG MARCH] No 9, 1982]

[Text] An utterance, an article and a meeting are all very refreshing things. The most refreshing thing about the 12th national congress may be summed up in one word--communism. Communist targets, communist practice and communist ideology were interwoven through the documents and decisions of the 12th national congress like a red ribbon. Thus, when we study the 12th national congress we must bring out this communist spirit. In other words we must stand on the high level of communism to understand and comprehend the essential spirit of the documents of the 12th national congress and get to grips with the fundamental direction of every policy and task outlined and decided upon in the 12th national congress.

Comrade Hu Yaobang made it very clear in his report when he said: "In order for communism to achieve full realization as a social system in China we still face several generations of long and arduous struggle. But communism is first and foremost a movement--and the final aim of a movement such as this is to achieve a communist social system." Thus we must integrate closely our present practice with our future aims and take the 12th national congress as the correct road for establishing a new phase in the socialist modernization program and integrate it and its policies closely with our long-term ideal of achieving communism. We must both keep this in mind and adhere to it. Since the establishment of the PRC, the problems that we have come up against during the course of our socialist construction work have many different causes behind them but we can in essence say that they were all the result of insufficient or inept handling of just this relation. Thus, during the stage of socialism we must support and believe in guidance by communist ideology and improve and strengthen the teaching of communist ideology without hesitation or faltering. Furthermore, under guidance by communist ideology we must draw up policies and plans based on our present situation and then fully support and endorse their implementation. In other words, we should not separate communism and socialism either on a theoretical or a practical basis, nor should we oppose them to one another. Furthermore we should not confuse socialism and communism in their developed stages nor equate the two of them on this level. Only in this way can we keep our feet on solid ground but have a clear view into the long-term future. And only in this way can we ensure that the communist movement progresses along correct lines and with healthy development from the beginning to the very end.

An important lesson that we have learned in the past is that sometimes our understanding of socialist society becomes very one-sided and biased. History has proven to us that vacuous politics, setting up "spiritual omnipotence" or aiming for similar extremes and thereby ignoring and weakening political and ideological work, thus seeing only material factors and ignoring the human ones, only tends to obstruct the progression of our cause and can even create serious damage. Thus it was that Comrade Hu Yaobang pointed out in his report, that socialism is constantly moving nearer its high level target of communism and this progression cannot only rely on increases in material wealth, it must also rely on the constant elevation of the people's communist ideological consciousness and the constant activation of the revolutionary spirit. If under the guidance of communist ideology we ignore the great task of establishing a socialist spiritual civilization throughout society then it is impossible to guarantee a socialist direction for our modernized construction program and thus our socialist society will lose its ideals and its aims as well as its spiritual force and fighting will with the result that we will be unable to resist corruption by all kinds of degenerate factors and we may even end up seeing lopsided development and the appearance of decadence and evil ways.

CSO: 4004/12

THE INTELLECTUALS ARE A FORCE ON WHICH THE MODERNIZATION PROGRAM DEPENDS

Beijing RED FLAG in Chinese No 22, 16 Nov 82 p 48

[Article by Zhang De [4545 1795]--reprinted from Jiangsu's QUNZHONG [THE MASSES] No 19, 1982]

[Text] In order to fully get to grips with such vital tactical points for the development of the economy as education and science, to allow full expression to intellectuals during the process of constructing the two kinds of civilization, and to struggle for the realization of our tactical aims, the following items of work must constantly appear on the agendas of every level of party and government bodies.

1. While studying and disseminating the spirit of the documents of the 12th national congress we must remember to study and promote the policy toward intellectuals. In this way the entire party and the masses will come to understand and appreciate that the key to realizing the four modernizations program lies in the modernization of science and technology while the foundations lie in establishing a sound education.

2. We must continue to implement the party's policy on intellectuals. This includes rectifying leftover problems of cases of injustice, carrying out communist ideological education among intellectuals, study by intellectuals of their tasks and duties and gradual improvements in the working and living conditions of intellectuals, based on feasibility and necessity.

3. Draw up 5 to 10 year plans and clear targets for such cultural undertakings as education, science, culture, hygiene and physical education on the basis of overall balance.

4. Take care to develop and foster activists amongst intellectuals, particularly middle-aged intellectuals, to develop party members and thus strengthen the party ranks. Furthermore we should take care to select cadres from amongst the intellectuals to enrich every level of the leadership bodies and thus improve the intellectual structure of party and government bodies as well as leading cadres in enterprise and work units. People generally dislike it when confused orders are issued but cold and objective analysis shows us that the issuing of confused and wrong orders by leading bodies and cadres cannot always entirely be traced back to

intentions and morals of the individual leaders; more importantly, such events are the result of two objectively existing factors. One is that they have the power to issue orders. The other is that they lack the necessary intellectual knowledge for their area of leadership. Let us use a formula to explain this: power plus lack of knowledge equals the issuing of confused and incorrect orders. Production needs unified leadership and leadership needs authority. Authority thus requires that someone submits to the authority since authority can only exist under the premise of having someone to submit to it. In order to avoid the issuing of confused or incorrect orders the leadership bodies should be made up of people "in the know." Leading cadres must be "in the know" and an important condition for being in the know is that one has the specialized knowledge to carry out one's own work.

5. We must make use of all methods acceptable to intellectuals to constantly urge them to consciously raise their political consciousness and to consciously make use of new knowledge to enrich themselves. Furthermore they should consciously make use of the principles of socialism to correctly handle all kinds of relations including the relations between the individual and the collective, the intellectual, the worker and the peasant, and the internal relations between old, middle-aged and young intellectuals and the relations between work responsibility and glory, and treatment.

RANDOM TALKS ON PROFESSIONAL ETHICS

Beijing RED FLAG in Chinese No 22, 16 Nov 82 inside back cover

[Article by Lin Wenshan [2651 2429 1472]]

[Text] As everyone strives to promote the establishment of a spiritual civilization, joyous reports of good deeds have been pouring in. Two such reports, concerning scientists, can be seen in the YANGCHENG WANBAO.

One is: Comrade Xiong Jincheng and Comrade Zhou Zuoling were both separately engaged in research but arrived at the same results. In assessing his "honor of being first" to arrive at the results, Comrade Xiong Jincheng, who was first to publish his thesis, openly stated that the honor of being first to arrive at the results should go to Comrade Zhou Zuoling, who published his thesis later. Seeking truth from facts, Comrade Xiong Jincheng stated that he only entered this field of work after being introduced into it by Comrade Zhou Zuoling. Although Zhou Zuoling's thesis was published only later, it was actually sent off 3 months earlier. As a result it was Comrade Zhou Zuoling who received the research results award. Another is: Researcher Lou Tongmao, head of the geomorphology department of the Guangzhou Geographical Research Institute, put all of his major efforts into supporting the work done by his middle-aged and young researchers. The amount of work that Comrade Lou Tongmao put into many theses from their inception to the final draft was frequently no less than that of the actual writer. When people put his name at the front, he always crossed it out. Under such motivation as his, unity and cooperation became the order of the day throughout the entire department and as a result, last year they made three relatively important scientific achievements, publishing 15 scientific articles.

Of course we are not by any means advocating avoidance of publicity. When listing references and acknowledgements in a scientific thesis or publication, apart from stating whose work the publication involved, it should also state the name of the person in charge and responsible for the line of thinking or the material behind the work. But, let us be honest here, as far as some intellectuals are concerned, acknowledgements do have a great deal of attraction. Comrade Xiong Jincheng and what he did are both worthy of respect for he need only have stayed silent and "the honor of being first" would of course have been his. But he stood up and spoke the truth. For Comrade Lou Tongmao to put his name in the acknowledgements would have been both reasonable and legal. But he did not agree with doing things this way. Using himself he fully embodied the spirit of the so-called "human ladder or chain" thereby encouraging his followers to aim for equally lofty realms. Both of the comrades are not only educated but truly ethical.

It is said that in theatrical troupes in the old society there was a saying, "backbiting art" meaning that between the performers there was often jealousy, struggle for fame and jockeying for position. There was obvious backbiting and covert backbiting--backbiting on and off stage. Obviously all this backbiting gave rise to a great deal of lost energy and a lowering of the artistic effect of performances. This terrible phenomenon of "backbiting" did not of course only exist amongst theatrical troupes, it was also to be found in scientific and various other fields. Such people, fearing that the achievements of others would surpass their own would do everything in their power, using all their authority and connections to stifle the opposition and even going to the extent of confounding the achievements of others. Untalented and uneducated people would use all sorts of means such as plagiarizing and lifting of work in order to take the credit for something. Often the theory would be someone else's, the writing another's, and yet those who had authority would put their names on the work, even at the head of the work. Some people even went so far as to satirize and joke about the true contributors and writers of a piece of work by claiming to be "above material and worldly pursuits."

Under the influence of such a lack of professional ethics, being adept in the "study of contacts and string-pulling" allowed people to enjoy juggling things so that they could profit without working, gaining both fame and wealth, while those who really spent their time working hard on various pieces of work found their lives beset with problems and lived in perpetual terror. Today, enterprises and work places have all expressed the need to lay down a code of professional ethics, and from what we have discussed it is obviously very necessary. Around 100 of China's greatest scientists and experts in technology including Mao Yisheng and Zhou Peiyuan have drawn up a "code of professional ethics in science for workers in science and technology," and this publication includes one criterion for professional ethics as follows: Support creative invention and encourage others to do better than oneself. Such an aspect of professional ethics is a very good thing and embodies the country's and the people's future expectations of workers in science and technology as well as giving voice to all the demands of true and correct scientific workers in China.

Science seeks to establish the truth from facts and without this central aim, what contributions can science make? Liang Qichao wrote a book called "Science in the Qing Dynasty" and it is very well worth reading, both for natural and social scientists. In addition to discussing scientific research during the Qing dynasty it also discusses the scientific mood and professional ethics of that time and there are a few lines which are still relevant to us today. For example:

Everyone considers it immoral to hide or twist facts and proof.

Whoever speaks must prove his words—plagiarization is a greater immorality.

In terms of this question, overbearing manner, incoherent writing or those insinuating ridicule are also immoral.

If we take these few lines and with them examine the situation in science and technology over the last few years we can see that for a variety of reasons this Qing dynasty scientist's methods of evaluating immorality are still to some extent pertinent to some of our scientific books. Thus we must resolve this situation if we wish to see further development to our science and technology.

After the ideological confusion caused by the 10 years of social chaos we must now work hard to make respect of professional ethics common practice. This means that every line of work and research must draw up individual codes of professional ethics and praise good people and good deeds while criticizing bad people and bad deeds. In this way the domain of ideology will once again take up a forward position. Let us hope that from today we receive more and more reports of good deeds and that we hear no more of cases of people in power signing their names to work with which they had nothing to do.

BE A QUALIFIED LEADER OF THE NEW PERIOD

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 2-6

[Article by Chen Yeping [7115 6851 5393]]

[Text] The new party constitution adopted by the 12th CPC Congress added a new chapter on "party cadres" and stipulated in explicit terms the basic requirements that leading cadres at various levels should meet. This is an outstanding characteristic that the party never had in its previous constitution. Why in addition to the requirements, duties and rights of party members, must there be specific stipulations for leading cadres? This is a problem we must properly ponder while we study the new party constitution. Only by profoundly comprehending the essence and significance of these stipulations can we further conscientiously study hard through practice in accordance with the demands of the new party constitution, constantly raise our quality and be a qualified leader of the new period.

It Is the Necessity of the New Period To Set Higher Demands on Leading Cadres

Our country has effected another historical change and ushered in a new developing period. To vigorously develop China and build a modernized socialist country with a high level of civilization and democracy is the common aspiration of the billion Chinese people and also a glorious task given to Chinese communists by our great era. In order to accomplish the most magnificent and creative project in human history, we must not only further eliminate the numerous negative consequences left over by the decade-long internal turmoil and strive to attain a fundamental turn for the better in the state financial situation, social mood and party style within 5 years, but also blaze new trails in the building of socialist modernization with Chinese characteristic. We must not only create a new situation with revolutionary courage, resourcefulness and leading capability, and build material civilization for socialism, but also build spiritual civilization for socialism with communist ideology as its guidance. We must not only have a good grasp of Marxism and Leninism, thoroughly understanding the development and changes of domestic and international situation and formulate a series of principles, policies and a strategic plan that conform to the objective reality, but also take forceful organizational measures to ensure their implementation and execution and effectively prevent and overcome all kinds of interference. This is an extremely arduous and complicated task that needs our utmost and unremitting efforts. In order to attain the general task of the new period at present, the 12th CPC Congress stipulated a clear strategic target, focus and measures, and concerned principles, policies and elected a strong central leadership core. The key for the future is to have large numbers of leading cadres that conform to the needs and characteristics of the new period and through their exemplary and backbone role lead the broad masses on various fronts to carry on highly effective and creative activities in creating a new situation in all fields of socialist modernization. Without this condition, there will be no hope for our cause. Politically, professionally, ideologically and in its style, the new party constitution has set further higher demands on leading cadres. This has precisely reflected the objective demand and at the same time, it is an urgent need of enhancing the self-building of the party and adhering to and perfecting the leadership of the party during the new period.

Although our present ranks of leading cadres were seriously undermined in the 10 years of internal turmoil, through the work of the past few years, they have been gradually readjusted, reorganized and strengthened. Viewed from the situation of the whole, this rank is firm and has its fighting capacity. Our veteran cadres in particular have experienced the struggle and test of various historical periods, made great contributions to the revolutionary cause and accumulated abundant experiences. Although a number of these comrades have become old and infirm and some are going to or will withdraw to the second line, they have kept the lofty sentiments and aspirations of their youth. They are still working hard for the state, sharing the burdens of the party, working for the interests of the people and continuously bringing their role into play. Since the 3d Plenary Session of the 11th CPC Central Committee, the reason why the line, principles and policies of the party have been carried out, why the work on various fronts has achieved great victories obvious to all and why the historical change could be successfully effected under very difficult conditions, is that it is inseparable with the efforts of the leading cadres at various levels. This fact itself has proved that our ranks of leading cadres are worthy to be the backbone force of the party and state. It is wrong if we are not aware of this point.

Certainly, to affirm the essential and main aspect of the ranks of our leading cadres and their important role in developing socialist cause does not mean that everything is perfect. In the past few years, the CPC Central Committee has time and again reminded us that due to historical reasons, not only is the problem of overage common in our leading bodies, but also the theoretical and educational level of a substantial number of our comrades has been rather low. There has been a lack of professional knowledge, particularly of modern scientific and technological knowledge and lack of management and organizational leading capacity to meet the needs of the four modernizations. For instance, some comrades lacked political foresight, they could not correctly apply the stand, viewpoint and method of Marxism-Leninism-Mao Zedong Thought to observe the new conditions and problems occurring in the historical change, could not distinguish the erroneous trend and tendencies and even wavered right and left and got mixed up with erroneous things; some comrades had no idea about the work they were responsible for, could not understand the situation or grasp problems, could not offer ideas or properly use cadres and at every turn lost track of the sequence of events; some comrades had scanty knowledge of new emerging things, still kept to the conventional ways of doing things according to their impression, pattern and model, doubted reform and dared not create new things. Some other comrades were corroded by the ideas of the exploiting class and influenced by unhealthy tendencies, they forgot the great objective of communism, discarded the party's revolutionary tradition and style and were full of selfish and distracting thoughts; some even sought private gains by abusing their power, forgetting all moral principles at the sight of profits and degenerated into vulgar egoists or criminals that gravely sabotaged the socialist cause. All these practices show that there existed among our leading cadres the problem of not adapting to the rapidly advancing era and the new situation after the shift of focus in our work. If we ignore these shortcomings and the gap by which we are lagging behind and fall into blindness, we will be more weak and incompetent in the great struggle to create a new situation in all fields of socialist modernization and fail to shoulder our leading responsibilities. The basic requirements stipulated for leading cadres by the new party constitution have illuminated the correct orientation and way for us to constantly march ahead. Every leading cadre in office and those comrades who are to take up leading posts, must soberly estimate the changing and developing situation, practically realize our shortcomings and weak points, inspire our enthusiasm, work hard and aim high, narrow the gap between ourselves and the needs of building socialist modernization and be a leader with foresight and sagacity and be capable of constantly creating new situations.

Principal Characteristics of the Basic Requirements for Leading Cadres in the New Period

The six basic requirements stipulated by the new party constitution for leading cadres not only summarized the historical experiences of the party in building its cadre ranks, but also in the light of the characteristics and needs of the new period, raised the requirements for leading cadres to a new high level, which has the clear-cut character of the time. Each of the six requirements has its specific substance and they are all interrelated. They form an inseparable whole with each part complementing the other, which manifests the organic unity of being Red and expert, and having both ability and political integrity. We must master the essence and characteristics of these six requirements as an essential whole, comprehensively understand its great significance in perfecting and adhering to the party leadership, preserve the great significance of the building of socialist modernization and conscientiously temper ourselves to be more matured and be further adapted to the needs of the new period.

1. The basic requirements indicate the unity of the scientific nature of revolutionary practice with steadfastness of political orientation of leading cadres in the new period.

A firm and correct political orientation is the foundation for our communists to properly do all work well. Without this foundation, our revolutionary cause is bound to fail and suffer setbacks. The revolutionization of cadres, above all, requires this foundation, in which the most important thing is to uphold the four basic principles with the party leadership as its core. In the basic requirements, the first one indicates that it is necessary for the leading cadres of the party to "have a fair grasp of the theories of Marxism-Leninism-Mao Zedong Thought and the policies based on this, and be able to adhere to the socialist road, fight against the hostile forces disrupting socialism and combat all erroneous tendencies inside and outside the party." That is to say, as a leading cadre of the party, he must not only be a firm revolutionary, but also be a sober-minded Marxist; in addition to being loyal to and fighting all his life for the cause of socialism and communism, he must also genuinely master the basic principles of Marxism and be good at applying the stand, viewpoint and method of Marxism to correctly handle all sorts of practical problems. If we are not qualified with this requirement and fail to differentiate real from sham Marxism, true from false socialism and fail to distinguish and resist the interference from "left" and right deviations, we will then not be able to keep to the firm and correct political orientation. Why is that among some of our leading cadres with good intentions, they have run their work wrongly or foolishly and were even deceived? Why is that some people who have not fully realized the correct line, principles and policies of the party and were obviously wrong in not properly implementing them, and have blamed the party's policies for being "changeable"? Why is that some people were busy the whole year round, but still could not get to grips with the essentials in their work and failed to create new situations? In addition to the respective and specific reasons, one of the important and common weak points is that they neglected the study of Marxism-Leninism-Mao Zedong Thought and did not know and were not good at applying the Marxist stand, viewpoint and method to understand the new situation, realize newborn things and study new problems and could not soberly and correctly guide their work, resulting in the confusion of right and wrong by taking truth as falsehood and vice versa. If this work is not first solved, we will get nowhere in all other work.

Leading cadres who are determined to carry out reforms and are keen to forge ahead must have a firm and correct political orientation and also a practical scientific attitude as well. With only the former and without the latter, we are bound to make mistakes or even go contrary to our wishes and do the opposite of what we would wish. Due to the influence of dogmatism and bookishness, some of our comrades have probably forgotten to "proceed in everything from actual conditions"--the fundamental principle of Marxism. They were used to mechanically copying and relaying the instructions of the higher level and believed themselves to be running affairs according to the principles and to be politically in unity with the CPC Central Committee. It is quite obvious that this is a muddled idea. Since the 3d Plenary Session of the CPC Central Committee, the line, principles and policies laid down by the CPC Central Committee on the basis of setting things right were itself an outcome of the combination of adhering to the scientific attitude of Marxism-Leninism-Mao Zedong Thought with the specific practice of the great historic change. Without a scientific attitude of seeking truth from facts, it would be impossible to correctly comprehend its spiritual essence, still less to correctly and creatively carry it out. This is the fundamental reason why those empty talkers who knew only how to shout slogans and brag, and those boorish people who acted blindly and recklessly in spite of subjective and objective conditions, were bound to change and distort the line, principles and policies of the party. Therefore, leading cadres at all levels must attach great importance to theoretical study, conscientiously read books, be bold to practice and learn to apply Marxism-Leninism-Mao Zedong Thought in guiding their work. At the same time, they must frequently make investigations and study, know the situation well, firmly grasp principal problems, make great efforts to master the objective law of the building of socialist modernization, persist in seeking truth from facts and correctly lead the masses. Only in this way can we rationally and effectively organize the people's initiative and creativeness to become a powerful strength in conscientiously promoting the building of the four modernizations.

2. The basic requirements indicate the unity of strong revolutionary dedication with the political sense of responsibility and ability of being competent at leading work of leading cadres at the new period.

The new party constitution has demanded that leading cadres at various levels "be fervently dedicated to the revolutionary cause and be imbued with a strong sense of political responsibility and be qualified for their leading posts in organizational ability, general education and vocational knowledge." It is quite necessary to put forward these demands on leading cadres in the new period. Leading cadres at various levels are organizers and leaders in creating a new situation in all fields of socialist modernization. Whether or not they have the great objective of communism in mind and are highly responsible to the party and people by devoting themselves to the building of spiritual and material civilization, fear no difficulties and are bold to do pioneering work has great importance to the success or failure of the cause of socialism. It is quite impossible for people who lack political foresight and have no revolutionary enthusiasm and confidence in winning victory to shoulder such heavy responsibility, but to build a socialist country with Chinese characteristics, we need to combine the universal principle of Marxism with the development of concrete practice of China's socialist construction and rely on our own practice in exploring and advancing ahead. In order to meet this demand, we must not only carry on our fine character and strong points but also have the new quality and capability required by the new period and possess the relevant educational level, professional knowledge and organizational ability. Otherwise, our revolutionary cause and political sense of responsibility cannot be properly implemented and our good wishes for creating a new situation will also fail. We must assiduously learn cultural and scientific knowledge, be proficient in our professional work, possess organizational capability and management experience for being competent at the leadership job and genuinely achieve the unity of being Red and expert, and having both ability and political integrity. Only in this way, can we correctly, timely and specifically guide practical work and earnestly shoulder the heavy responsibility of leading the building of the four modernizations.

Due to a series of political movements and the influence of "left" deviation in our guiding ideology, for years we neglected and even ceased to conduct cultural education and professional training of cadres. What is more, the problem of rational use of talents was not properly solved. That is why in the leadership bodies at various levels, there were very few university or college graduates or those equal to this level, who were proficient in their work and familiar in management, which resulted in many difficulties in our work. This contradiction became more acute after the focus of our party work was changed. Leading comrades of the CPC Central Committee time and again pointed out that the realization of the four modernizations rested on whether or not we could make the ranks of cadres more revolutionary, younger in average age, better educated and professionally competent. We must fully realize the gravity and urgency of this problem. History is developing and matters are changing all the time. There are endless new conditions and problems that need to be studied and solved. Many new tasks compel us to master more new knowledge and skills that we never approached or were familiar with before. If people always think of themselves as "O.K.," "not too bad" and do not have the determination or resolution to conform to the criteria of cadres, then certainly they forfeit the qualification to be a leader in the new period.

3. The basic requirements indicate the unity of the fine character of wholeheartedly serving the people with the principle of party spirit of being boundlessly loyal to the party's cause of leading cadres of the new period.

The new party constitution has demanded that leading cadres at various levels "have a democratic work style, maintain close ties with the masses, correctly implement the party's mass line, conscientiously accept criticism and supervision by the party and the masses, and combat bureaucratism" and "exercise their functions and powers in the proper way, observe and uphold the rules and regulations of the party and the state, and combat all acts of abusing power and seeking personal gain." This requirement has great significance to the building of cadre ranks and leading bodies at various levels in the new period. Our party is the party in power and our country is a socialist state led by the working class in which the entire laboring people are masters of their own. Regardless of the level of their position or limits of power, party cadres are public servants of the people. The people entrust the power to us because they are confident that we can represent the interests of the people and loyally run affairs in the interests of the people. Long ago Comrade Mao Zedong said: "The Communist Party is a political party which works in the interest of the nation and people and which has absolutely no private ends to pursue. It should be supervised by the people and must never go against their will." ("Selected Works of Mao Zedong," Vol 3, p 767) He also said: "Our duty is to hold ourselves responsible to the people. Every word, every act and every policy must conform to the people's interests, and if mistakes occur, they must be corrected--that is what being responsible to the people means." ("Selected Works of Mao

Zedong," Vol 4, p 1074) Here Comrade Mao Zedong not only clearly defined that "all for the people" is the fundamental purpose of the party and the starting point and end result of communists in running anything, but also expounded the uniformity of wholeheartedly serving the people with being loyal to the party's cause, and the activity of being responsible to the people with being responsible to the leading organs of the party. To be responsible to the interests of the people means being responsible to the party. At present, the fundamental interest of the people of the whole country is to unite the broad masses of people and strive to build China into a modern socialist country. If we deviate from this fighting objective, it would mean to go against the purpose of the party to serve the people and it would be out of the question to be responsible to the party and the people. Any viewpoint and acts that separate or isolate the two are wrong.

The prestige of our party and leading cadres is not established on the power entrusted to us by the people but on what we have done for them. Power has real strength and is effective only when it is combined with the will and interests of the people. Any power, departing from the interests of the people and without the confidence and support from the people, is bound to be weak and unreliable. Our party has always emphasized that leading cadres of the party must genuinely and sincerely respect, have faith in and rely on the people, persist in the mass line, consult with the masses when matters arise, listen attentively to the voice of the masses at all times, be concerned with the well-being of the masses, consider and be eager to meet the needs of the people and resolutely oppose any acts that are harmful to the interests of the people. Under the education of the party over a long period of time, the majority of our leading cadres could fulfill their duty, wholeheartedly serve the people and were worthy of the name of being public servants of the people. But there are also a minority of people who have become lords and officials, have forgotten the deserved revolutionary character and lofty sentiments of communists and have abandoned the tradition and fine spirit of our party. They abused their power at hand and engaged in vulgar interests and sought personal gains for themselves, relatives and friends; or practiced in one man has the final say, standing high above the masses, riding roughshod over them, not listening to the opinions of the masses and accepting supervision by the masses; or ignored the well-being of the masses and felt apathetic toward the urgent and rational demands of the masses. These behaviors and bureaucratic airs that harm the interests of the people have seriously impaired the prestige of the party and government, dampened the enthusiasm of the masses and are very harmful to the building of the four modernizations. The stipulations of the new party constitution in this respect will be conducive for party organizations and the masses of the people to publicly and effectively supervise leading cadres at various levels, so that they can be strict on themselves, forever maintain the true qualities of being public servants of the people and conscientiously perform the duties the party and people have entrusted on them.

Look Far Ahead, Aim High and Advance Despite Difficulties Are the Deserved Characteristics of Leaders in the New Period

In the final analysis, the basic requirements for leading cadres is that they must be firm, sober-minded and promising Marxists and leaders of the socialist cause. Confronted with this earnest problem, what should the leading cadres at various levels do? There are but three kinds of attitudes: The first attitude is they judge the hour and seize the situation, advance despite difficulties and in accordance with the demands of the building of socialist modernization, study hard through practice, raise their level, improve their work style and strive to be qualified leaders; the second attitude is that they are not willing to face the practically existing contradiction, lack determination and boldness in marching forward, blame everyone and everything except themselves, hesitate to press forward and let things drift on and on; and the third attitude is that they have the intention to forge ahead but are not willing to do practical work, talk too much but do a little, are very lazy and have little drive, dare not take big strides and are not capable of creating a new situation. It is obvious that the first attitude is more practical and realistic. Only by unswervingly working can we make progress. We surely will not learn from the latter two, which manifest a low spirit. Although it is an old saying that "a boat sailing against the current must forge ahead or it will be driven back," it is philosophical. If we do not study and make progress, we are bound to lag behind the situation and be eliminated by the huge waves of the times.

However, it is no easy job to fully acquire the demands of the basic requirements. We must set strict demands on ourselves and make great efforts. But since we are leading cadres of the new period, we must be responsible to the great cause of socialism, the millions of people and the coming generations. There is no other criteria than the above and we must never hesitate to set strict demands on ourselves. Are these requirements unattainable? Certainly not. In the ranks of our existing leading cadres, whether they are cadres of higher or of grassroot levels, old or young, have a solid or poor base, there are many comrades who conform or basically conform to the six requirements, and none of them could reach this level without hard work over a long period. "Where there is a will, there is a way." The key is whether we have this "will" or not and whether we are willing or not to put in a lot of effort in study. Here there is a fundamental problem of communist consciousness, that is, the understanding and attitude on the building of the four modernizations at the present stage. Provided we have a high sense of responsibility toward the party's cause, know our own limitations, are genuinely aware of the hidden danger of our insufficiency and the gap by which we lag behind, sincerely and not perfunctorily come to realize from blind complacency and sticking to the old ways, and are determined to rouse ourselves to catch up, no matter the disparity of our gap and insufficiency, we are sure to catch up and keep pace with the times. Modern science and technology is changing with each passing day and the cycle for new knowledge is getting shorter and shorter, particularly at a time when our country is confronted with a profound change and, new problems and conditions are emerging one after another. Even to those comrades who have a high level of education and profound experiences, there is also a problem at present of studying and constantly studying. If we are merely satisfied with our past knowledge and experience and do not make new explorations, it would also be impossible to meet the needs of our work and play the role of passing on experience, giving help and setting examples in training new cadres. As for those young cadres who have been elected to the leading posts at various levels, they should further spur and measure themselves by the six requirements in all matters, redouble their efforts and strive as early as possible to be competent in the duties they undertake. Inspired and guided by the spirit of the 12th CPC Congress and with the ardent expectations of the people of all nationalities throughout the country, we are confident that the leading cadres at various levels will profoundly realize the historical responsibility they are shouldering, further set strict demands on themselves, study and work hard, make themselves leaders qualified for the new period at an earlier date and remarkably accomplish all the tasks the party and people have entrusted us with.

CSO: 4004/15

BE MORE CONSCIENTIOUSLY AND RESOLUTELY POLITICALLY IN LINE WITH THE CPC CENTRAL COMMITTEE

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 7-9

[Article by Liu Zhijian [0491 1807 1017]]

[Text] It is a matter of prime importance for the whole party, the whole army and the people of all nationalities throughout the country to study, publicize and implement the documents of the 12th CPC National Congress. At present, the vast number of commanders and soldiers in our army are conscientiously studying these documents. They are making efforts to unify understanding and action in the light of the program, policies and principles put forward by the 12th party congress, and are striving to fulfill the glorious tasks the party and the people have entrusted to them and to make more contributions in safeguarding and building our socialist motherland. We have much work to do. But to the people's army, which is under the leadership of the party, the most important thing to do is to keep political unanimity with the CPC Central Committee. This is a principle of party spirit, which all Communist Party members and party organizations at all levels must adhere to. It is also a political principle and an organizational principle that all cadres and fighters must abide by. Consciously keeping political unanimity with the party Central Committee is an important sign of whether we are conscientiously studying and implementing the documents of the 12th party congress and an important guarantee for creating a new situation in modernizing and regularizing our revolutionary army under the leadership.

Since the 3d Plenary Session of the 11th CPC Central Committee, in accordance with the directives of the CPC Central Committee and the Central Military Commission, the CPC committee of our PLA units has repeatedly emphasized that keeping political unanimity with the CPC Central Committee is a matter of fundamental importance that must be firmly grasped in doing party committee work and political work. It has also put forward concrete demands and measures on this fundamental problem and has done much work. Judging from the overall situation, since this problem has been grasped firmly and consistently, most cadres and soldiers are able to conscientiously implement the party's line, policies and principles in the process of shifting the focal point of our party's work, and marked progress has been achieved in various aspects of our work. However, we must not be satisfied with these achievements. Instead, we must realize that the 12th party congress has set a higher demand for us on the question of keeping political unanimity with the CPC Central Committee. We must further do a good job in this respect.

In order to create a new situation in all fields of socialist modernization, the CPC Central Committee pointed out that it is necessary to strengthen party building and enhance the fighting strength of the party to suit the needs and characteristics of the new historical period. Ours is a party of militancy. In order to make it a strong core of leadership in socialist modernization construction, it is necessary to preserve a high degree of centralism and unity in our party. This is a matter of great importance. We must practice democracy within the party, but we must also have a high degree of centralism on the basis of a high degree of democracy. Only thus can the whole party take concerted action in fighting for the common goal, and only this type of party is really militant.

The fighting strength of the party is chiefly displayed through the role played by the core of the party leadership. But how does the core of party leadership display its role? First it must work out and implement a correct line and correct policies and principles, and must do a good job in organizational work as well as in propaganda and education. Second, it must give play to the exemplary role of all party members in various jobs and in social life. A Marxist political party attaches great importance to the formulation of a correct program, for it is a banner from which the masses of people can recognize the party and decide whether they support it. Simultaneously, a Marxist political party also attaches great importance to concrete action. It holds that, in a sense, concrete action is more important, for only when the whole party takes concerted action in fighting for the realization of the party's program can it rally its determination and win real support and the faith of the broad masses of people. For this reason, all party members must take the requirements of making concerted efforts in the whole party as a fundamental principle in dealing with relations between the individuals and the party organization. They must firmly and consciously keep political unanimity with the party Central Committee. If this principle is sabotaged by unorganizationed and indisciplined action, the unity and fighting strength of the party will be undermined and the fundamental interests of the people will be damaged.

Political unanimity must be achieved on the solid basis of ideological unanimity with the party Central Committee. The organizational principle of our party has always been: The individual is subordinate to the organization, the minority is subordinate to the majority, the organizations at lower levels are subordinate to those at higher levels, and various organizations of the whole party and all party members are subordinate to the party's national congress and the Central Committee. This principle and discipline of democratic centralism was established on the ideological basis of a high degree of consciousness. The line, policies and principles of our party are formulated by integrating Marxist-Leninist principles with the concrete conditions of our country. They were from, and are adhered to by, the masses of people. Therefore, without the masses' deep understanding and conscientious support, the party's program and its policies and principles cannot be well implemented merely by means of administrative orders and organizational measures. Thus, when we emphasize the importance of keeping political unanimity with the party Central Committee, it is first necessary to require that all party members have a profound understanding of the party's line, policies and principles both in theory and in practice so that their consciousness can be enhanced in implementation. In other words, we must not only organizationally obey the spirit of the central authorities and make a statement to show our resolute support of it, we must also change our past attitude of knowing only the how without knowing the why and change the status of having only half of the knowledge. Only when political unanimity with the party Central Committee is achieved on the basis of unified understanding and a high level of political consciousness can it be firm and reliable and be able to withstand the test of tortuosity and complications in the process of practice. Now, the 12th CPC National Congress has already put forth fighting programs and tasks for the new historical period and has formulated a series of policies, principles and measures. We must first endeavor to get a deep understanding of the essence of these programs, policies and principles, and grasp their spirit so that we can solve various problems in our recognition by linking them with practice and unifying our understanding in light of these policies and principles.

There is another question that needs to be clarified. When we emphasize the basis of ideological unanimity, we do not mean that if we do not understand the party's policies and principles, we can disregard them and do whatever we like. On the contrary, it means a higher demand for keeping unanimity with the party Central Committee in action. Being Communist Party members, both our words and actions must always be in keeping with the party Central Committee and the Central Military Commission. We must not say or do anything that is not in keeping with, or is even against, the central authorities. This is the political discipline which we must abide by.

We must take concrete action to keep political unanimity with the party Central Committee. Keeping unanimity with the party Central Committee is not an empty slogan, but a principle of concrete action. A fine tradition of our party is that when we say it we must do it. The proletarian political party and the people's army always act on what they have said. This shows that they are highly responsible for the people. We must resolutely carry out the fighting program of the 12th CPC National Congress and adhere in a down-to-earth manner to the party's line, policies and principles, display the spirit of fearing neither hardship nor death, and do our bit for the rejuvenation of the country and the people's happiness. When we say or do anything, we must take the spirit of the 12th CPC National Congress as our guide, take the documents and directives of the party Central Committee as our standard, and obey the unified leadership of the party Central Committee. All party members must unexceptionally and resolutely carry out the principle of democratic centralism which the new party constitution has reiterated, that is, "various organizations of the whole party and all party members are subordinate to the party's national congress and the Central Committee." We will not allow such practices as saying yes but meaning no, complying in public but opposing in private, overtly agreeing but covertly opposing, feign compliance and implementing this principle according to one's likes and dislikes. We will not allow any factional action. We will not allow any pragmatic attitude toward the directives of the central authorities, that is, implementing only that part of the central directives that conforms to the partial interests of some people or their units. We resolutely oppose the trend of ultra-democracy and the decadent behavior of liberalism.

We must actively and creatively implement in our practical work the spirit of the directives of the central authorities. Keeping unanimity with the party Central Committee does not mean to blindly and mechanically carry out the directives of the Central Committee. Instead, it means to implement them in the light of the concrete conditions in our localities and units. We must carry out the directives of the Central Committee in a correct way rather than copy them mechanically in a simplified way. Only thus can we create a lively new situation in our practical work. The CPC Central Committee ardently expects that the PLA will continue to be a great wall of steel guarding our socialist motherland in the great struggle of creating a new situation in all fields of socialist modernization and be an important force in the building of socialist material and spiritual civilization. We must, in light of the actual conditions of the army, make concrete efforts to score new achievements in various aspects, such as in strengthening military and political training and enhancing the fighting strength of the army, in carrying out a long-term activity of learning from the advanced units and individuals in building socialist spiritual civilization, in training a generation of new people who have ideals, morality, cultural knowledge and sense of discipline, in speeding up construction of the frontier defense and in fulfilling the arduous tasks of guarding the frontier and guarding the four modernizations construction. We must make new contributions through our actions for the realization of the party's program and tasks.

In order to keep political unanimity with the party Central Committee, it is necessary to overcome all obstructions of the "leftist" and right erroneous tendencies.

As to various wrong words and deeds, we must carry out education or criticism, sometimes even necessary struggles against them, according to the seriousness of the errors. The present political situation of stability and unity is one of the best in our country since it was established. Permanent stability is an inevitable trend. However, since the pernicious influence of the "Great Cultural Revolution" has not yet been completely eliminated, and due to the corrosive influence of bourgeois ideas and the remnants of feudal ideas, various erroneous ideological trends still exist to different extents within our party, our revolutionary ranks and society. Some people who have been more seriously influenced by "leftist" ideology or bourgeois liberalism do not quite understand the party's line, policies and principles mapped out since the 3d Plenary Session of the 11th CPC Central Committee. Proceeding from "leftist" or right ideologies, they have misinterpreted, doubted and even resisted the party's policies. A small number of people with ulterior motives have adopted an antagonistic attitude toward the party's present policies. Some of them are trying to preserve the erroneous practices of the "Great Cultural Revolution," and some are fundamentally opposing the four basic principles. There are actually a small number of the remnants of the Lin Biao clique and the "gang of four" who are still occupying some leading posts, waiting for an opportunity to make trouble and opposing the correct line of the 3d Plenary Session of the 11th CPC Central Committee. We must keep a clear head toward all this. We must make a concrete analysis of these problems with the scientific methods of Marxism and treat different problems in different ways. Problems of recognition must be solved through persuasion and education; but obstructions from either "left" or right must be resolutely removed, or struggled against if necessary.

Emphasizing political unanimity with the party Central Committee is the need of safeguarding the fundamental interests of the party and the people, and the need of implementing the spirit of the 12th CPC National Congress and creating a new situation in all fields of socialist modernization. It is also a common desire of the broad masses of cadres and soldiers. The unity between the people of all nationalities throughout the country achieved on the basis of the whole party keeping political unanimity with the party Central Committee is a fundamental guarantee of the victory of our socialist modernization drive. We must fully understand this and take effective action.

PRACTICING FAMILY PLANNING IS ONE OF THE BASIC STATE POLICIES

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 10-13, 29

[Article by Qian Xinzhong [6929 0165 1813]]

[Text] In his report to the 12th party congress, Comrade Hu Yaobang pointed out: "Population has always been an extremely important issue in China's economic and social development. Family planning is a basic policy of our state. We must do our utmost to keep our population within 1.2 billion people by the end of this century. The total number of births is now at its peak. Excessive population growth will not only adversely affect the increase of per-capita income but also cause serious difficulties in food supply, housing, education and employment, and it may even disrupt stability. Consequently, we must never slacken our efforts in family planning, especially in the rural areas. We must conduct intensive and meticulous ideological education among the peasants. Provided that we do our work well, we can succeed in bringing our population under control." This exposition further expounds the great strategic significance and practical urgency of bringing our population under control in our country and concretely points out the objective, key points and orientation of family planning work. It is the fundamental basis and guarantee for us to make a good job in the promotion of family planning.

I

The population policy of controlling population growth and raising the quality of the population constitutes an important component part of the political and economic policies of Chinese society. As with other policies, China's population policy is also formulated in accordance with Marxist-Leninist theories and with our basic national condition. Therefore, it has a solid scientific foundation and completely corresponds to China's objective reality.

Marxism holds that in the process of the development of human society there consistently exist two kinds of production: "On the one hand, there is the production of the means of subsistence, namely food, clothing and housing and the production of tools needed for this purpose, and on the other hand, there is the production of human beings themselves, that is, the multiplication of species." ("Collected Works of Marx and Engels," Vol 21, pp 29-30) These two productions are inseparable and interrelated. The material production constitutes the foundation of the existence and development of society and also the foundation of the production of human beings themselves. Without it, human beings will be unable to exist, still less to have any descendants. The production of human beings themselves is a prerequisite for carrying out material production. Without a certain quantity set as a minimum population, there could not possibly be any social material production. Under any social system, there exist some proportional relations between the two kinds of production. If the production of man and that of material are mutually coordinated, economic and social development will be promoted. Conversely, if the two productions do not for a long time fit in with each other, economic and social development will be delayed. Under different modes of social production, the consistency between the production of man and that of material has a different nature, characteristics and consequences. In a society where everything is based on the private ownership system, where the material production or the production of population is carried out in a spontaneous and unplanned way, the balance between the two is achieved as it suffers constant destruction. Under the capitalist system, owing to the development of educational and cultural undertakings, family planning can possibly be carried out at the family level. However, taking society as a whole, the production of man is still spontaneous, just as production in specific enterprises is organized, while the production of a whole society is still anarchic. Only under the socialist system, that is, only when the public ownership system of the means of production has been realized and the socialist basic economic laws and the law governing the planned and proportional development of the national economy have come into play and the people have become the masters of society and even the masters of childbirth, can it be possible to put material production and population production under planning within the scope of the whole society, to have the two productions suit each other and to push forward the socialist society. Just as predicted by Engels as early as 100 years ago: "If we say that the communist society will have, in a certain period of time in the future, to carry out readjustment as it has done in the case of material production, and at the same time, it has to readjust the production of man, then it is precisely that society, and that society alone that can do this without the slightest difficulty." ("Selected Works of Marx and Engels," Vol 35, p 145)

Ours is a socialist developing country with relatively backward economic development and insufficiently developed science and education, a country of limited cultivated land. On the other hand, it has a huge population totaling 1 billion people of which 800 million are peasants, a big cardinal number of population, a composition of young people and a rapid rate of population growth. Therefore, how to harmonize the population growth with the increase of the national economy has become a major problem which our state has to solve. In a fairly long period in the past, owing to the lack of experience, we had a one-sided understanding of the population issue and stressed the argument that the more people we have, the easier it will be to accomplish things. This practice ran counter to the objective demands of the socioeconomic development of population growth and resulted in an excessively rapid growth in our population, in a disproportion between our population growth and production development and resulted in serious consequences.

Historical experience and lessons have shown that to carry out the socialist modernization program in a country like ours, while developing material production in a planned way, we must practice family planning and strictly control population growth so that our population will conform with the various plans of economic and social development.

First, bringing our population under control will be conducive to alleviating the contradiction of production of the means of production lagging far behind the excessive population growth and conducive to solving step by step the problem of employment. At present China has abundant resources in labor power. Being restricted by such conditions as funds, the scope of our production and construction cannot be expanded boundlessly. In order to solve the employment of surplus labor power, many enterprises and operating units had to excessively arrange the people waiting for jobs. This was detrimental to raising economic results and labor productivity. Furthermore, the superfluous staff and workers and the increased total amount of wages will mean adding more weight to financial difficulties and bring fairly great pressure to bear on the state. When the PRC was founded, in rural areas the average per-capita cultivated land was around 3 mu but at present it is only about 1.5 mu, constituting a 50 percent reduction. After the introduction of the production responsibility system, labor productivity increased substantially. In many places, about one-third of labor power was saved and as a result the contradiction between a huge population and an insufficiency of arable land become more pronounced. Therefore, from a long-term point of view, strictly controlling our population will gradually lighten the pressure on employment, gradually rationalize and balance the proportion between the working population and the means of production and proceed to contribute to raising the results of industrial and agricultural production and solving the problem of employment.

Second, bringing our population under control will be conducive to solving the contradiction of the production of the means of subsistence lagging far behind the excessive population growth and conducive to steadily improving the standards of living of the people. Since more than 30 years have passed since the founding of the PRC, great advances have been scored in China's national economy and a relatively big absolute number in the increases in the output and output value of industrial and agricultural production has been recorded. However, what everyone got is still limited because our population grows too rapidly. Most of the newly added means of subsistence are consumed by the newly grown population with the result that no proper improvements have been achieved in the people's standard of living and there is still a strain in food supply, clothing, housing, transport, education, public health work and other fields. Strictly controlling our population growth will alleviate the contradictions in these fields, improve the level of the people's material and cultural life and promote the realization of the objective of the Chinese people becoming comparatively well-off by the end of this century.

Third, bringing our population under control will be conducive to solving the contradiction between excessive population growth and the raising of the quality of the population and conducive to fostering talented people who develop in an all-round way--morally, intellectually and physically. The modernization of science and technology is the key link in the four modernizations program, and it therefore requires developing China's education, science and technology, public health work and various other undertakings. However, unplanned population growth is bound to seize China's limited investments in education and health protection and to interfere with the exploitation of intellectual resources and the raising of the quality of the population. Therefore, in order to raise the quality of the population in a planned way and bring up talented people of high quality so as to meet the needs of the four modernizations program, it is also necessary to bring our population under strict control.

Fourth, bringing our population under control will be conducive to solving the contradiction between accumulation and consumption and conducive to comparatively increasing construction funds. The 12th party congress has announced the grand goal of China's endeavors to modernize its economic construction by the end of this century, striving to quadruple the gross annual value of industrial and agricultural production In order to achieve this goal, it is necessary to amass a large amount of funds for construction. Excessive population growth will inevitably increase the part of accumulation funds in the national income and interfere with the level of accumulation needed in accomplishing the objective of economic construction. Therefore, strictly controlling our population is also an important factor for stabilizing the accumulation rate and ensuring the availability of the funds needed for the four modernizations program.

It can thus be seen that practicing family planning and controlling population growth is an important matter which concerns the success and failure of China's socialist modernization program. We must never slacken our efforts in this respect. Any slackening and wavering in our efforts in this respect will cause population expansion and will surely affect the realization of the objective of the four modernizations program and interfere with the happy future of the coming generations of the Chinese nation. This is where the strategic significance of practicing family planning becoming our basic national policy lies.

II

Since 32 years have passed since the founding of the PRC, with the deepening of our understanding of the population issue, China's population policy has constantly been developing. In the early 1950's, we never controlled our population and for a time even encouraged growth in our population; in the late 1950's, we began to pay attention to the matter of the relationship between population growth and economic development. However, our population continued to expand as a result of one-sidedly stressing that having more people was a good thing and erroneously criticized some scholars who engaged in population theory work. In 1962, the CPC Central Committee and the State Council issued a "Directive Concerning

Conscientiously Encouraging Family Planning" and explicitly pointed out: "It is the established policy in our socialist construction to encourage family planning in the cities and densely populated rural areas and to appropriately control the natural rate of increase so as to ensure that the matter of giving birth to children will be put under a state of planning rather than not being planned at all." By the 1970's the party and government had further deepened their understanding of the population issue and set the "late, sparse and few" requirements (that is, late marriage and giving birth to children late; the space between the first and second child should be longer than 4-5 years and each couple should have no more than 2 children). After the 3d Plenary Session of the 11th CPC Central Committee, our party made a further scientific analysis of the country's population issue and formulated the policy to fundamentally put an end to the excessive population growth in our country. In September 1980, the CPC Central Committee issued an "open letter to CPC and CYL members concerning the question of bringing population growth under control." In February this year the party Central Committee and the State Council issued a "Directive Concerning Continuing To Do a Good Job in Family Planning Work" and explicitly expounded to state cadres and staff and workers, as well as residents in towns and the country, except those who had exceptional cases and had received formal approval, the necessity of carrying out family planning and put forth the clear demand calling on each couple to have only one child. In rural areas, the practice of one couple, one child is universally encouraged. Those people who have practical difficulties and wish to have two children should arrange to do so in a planned way after being examined and approved. In any case, the practice of having three children should not be allowed. As for the minority nationalities, family planning among them should also be encouraged but the terms should be appropriately softened. In his government work report delivered at the Fourth Session of the Fifth NPC, Comrade Zhou Ziyang pointed out: "It is our policy to control population growth while raising the quality of the population." In his political report to the 12th party congress, Comrade Hu Yaobang clearly pointed out: "Family planning is a basic policy of our nation" and thus raised to a new level our understanding of the family planning issue.

The population policy of any country should serve the politics and economy of the country. China's present family planning policy should serve the strategic objective of the economic construction charted by the 12th party congress. At present China already has a population of more than 1 billion people and is faced with about a 15-year-long peak in the total number of births. During this period, on the basis of existing work, if on a nationwide scale we increase the rate of having a single child, control the practice of having two children and strictly put a stop to the practice of having three children, it will be possible for us to keep our population within 1.2 billion people by the end of this century. If every couple throughout the nation has, on the average, two children, the country's population will exceed 1.3 billion people by the end of this century. The excessive population will bring about diverse pressure on socioeconomic construction. We must have a sober understanding of this matter and make an earnest effort to implement the childbirth policy formulated by the party and government. While paying special attention to economic construction, we must simultaneously strictly control population growth and manage to grasp the "two kinds of production."

Another important content of our population policy is to raise the quality of the population including a series of work, such as eugenic births and child-rearing. In the past we paid insufficient attention to this. From now on, great efforts should be made to publicize and encourage eugenic births. Health departments should gradually open up outpatient advisory services on eugenics and strive to reduce the birth of invalid children who suffer from congenital diseases and other hereditary diseases. Along with this, we must still pay attention to eugenic rearing, universalize scientific knowledge of giving birth to children, strengthen maternity and child-care work and intensify preschool education so as to allow the next generations to receive as good an education as possible and to grow healthily. While developing the economy, we must still pay attention to adopting various measures to solve the problem of providing for the aged.

III

Provided that we correctly understand our policies, we can correctly carry them out and proceed to give full play to the might of our policies and achieve the expected results. At the beginning of this year, after the transmission of the "Directive of the CPC Central Committee and the State Council Concerning Continuing To Do a Good Job in Family Planning Work," the cadres and masses of many places had a deeper understanding of the concrete policies stipulated by the document and implemented them quite satisfactorily and thus vigorously propelled the promotion of family planning. But there are still some problems in some places in understanding the document and grasping the policies which demand earnest solutions.

Some comrades hold that childbirth policies stipulated in the "directive" of the party Central Committee are more "relaxed" than those in the "open letter" and for this reason, more relaxed practices were adopted in the practical work, resulting in an increase in the rate of having two children. There are also some comrades who deem that the stipulations in the "directive" are "stricter" than those in the "open letter" and, as a result, they were on the tight and strict side while implementing the stipulations. In fact, these two understandings are not comprehensive. It must be noted that the CPC Central Committee's "directive" and its "open letter" are identical in spirit. The "directive" further expounded the policies in accordance with the principles of policy of the "open letter" after 1 year and more of practice and work of the various places, and respectively set different concrete demands on the state cadres, staff and workers, residents in the towns and country, in the rural areas and among national minorities with regard to family planning. In order to really persist in our family planning policy, it is necessary to lay a feasible foundation and ensure that the majority of the people will support it through our work. This is an important matter which has a bearing on whether or not our family planning work can regain the initiative. Only when we strive to seek truth from facts, suit measures to local conditions and particular people, deal with each case on its merits and offer classified guidance and not indulge in "finding a single solution to diverse problems" can we achieve effective results.

As for the stipulations of policy on having one or two or three children, there is also a problem of how to correctly understand them and how to correctly implement them. Our country has a vast territory; the politics, economy, culture and the conditions of various social institutions of the various localities are vastly different and the distribution of population is quite uneven, so while bringing the practice of having two children under control, we must proceed from reality, set different requirements under different conditions and not indiscriminately impose uniformity. At present, in arranging those who wish to have two children, quite a few localities have formulated some stipulations which are geared to actual circumstances and have produced satisfactory results. It is reported that those who are allowed to have two children are relieved; those who are not allowed to have two children can give up the idea altogether and those cadres who engage in family planning work can heighten their confidence in their work. A serious problem at present confronting the country is that in some provinces and localities, the ratio of the practice of having three or more children is still relatively high. We must be resolute in solving this problem and reduce the rate of having more children as quickly as possible.

The fundamental question of family planning is to legislate. Without legislation, family planning work will not last long; with legislation, family planning work will gradually embark on the right course. Within 2 years, in accordance with the principle of integrating the higher and lower levels and combining the leadership of the specialists and the masses, the leadership at various levels must conduct investigation and study, explore the laws governing this work and strive to study and enact the law of family planning which will be effective in controlling population growth and which is geared to actual conditions.

In practicing family planning, we must persist in giving priority to ideological education, to contraception and to the day-to-day work so that our work can become a regular and systematic practice. This is also a problem which warrants our attention in our work. While practicing family planning, we must break with the old traditional concepts, such as regarding men as superior to women and continuing the family line by producing a male heir. This is an important matter of changing social customs and traditions and of building socialist spiritual civilization. We must do a good job in ideological education work. Provided that the people's thinking is straightened out, this work will play a role for a long time, but provided that the people's thinking is not straightened out, relapses will still emerge even if we have made some achievements over a period of time. To give priority to contraception, we must adopt safe and effective measures for contraception and birth control, protect the health of women and enthusiastically carry out family planning work in a manner suitable to particular people. Giving prominence to the day-to-day work should also be stressed. Family planning is a long-term strategic task. We must work out the plans for our work in accordance with this understanding and, through our unremitting efforts, infuse the party's policies into the minds of the vast numbers of cadres and the masses of the people so they will become conscious actions.

Of course, over a period of time, it is necessary for some localities to carry out some crash propaganda and educational activities. However, crash activities should be based on the day-to-day work. In light of actual conditions, the various localities and units should strengthen ideological and organizational work and the work to supply contraceptives and contraceptive instruments. Ideological work must be painstaking and meticulous, and measures must be efficient and practical. Crudely done work should be avoided. Many cases have shown that in the localities and units where family planning is carried out well the day-to-day work is all done satisfactorily.

Family planning involves every family and household and is the mass work in the broadest sense. We must have faith in the policies of the CPC Central Committee and in the consciousness of the masses and believe that through our work, the masses can conscientiously accept and support the party's policies. These two ideas should be firmly implanted in the minds of the cadres who engage in family planning. In our work, we must pay attention to summing up and spreading advanced experience so that the advanced localities, units and individuals can constantly grow in number, their results can be continuously consolidated and expanded, and they can influence and bring along the intermediate so as to advance together. At the same time, we must pay special attention to the less advanced localities, units and individuals and help them to catch up with the advanced. Family planning is an important matter of the whole party and of the people throughout the nation and is therefore a glorious and arduous task. To fulfill this task, the workers of family planning and medical and health workers must, under the leadership of the party committees at various levels, do their own work in the communist revolutionary spirit and at the same time, must rely on the cooperation in unity of the fraternal units and departments and on the support and backing of the broad masses. Under the guidance of the program of the 12th party congress, let us struggle hard with one heart and one mind, continue to exert ourselves indomitably and strive to create a new situation in the field of family planning.

THIS IS WHERE THE GREAT HOPES OF OUR COUNTRY'S RURAL AREAS LIE

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 14-16

[Article by Jing Ping [2529 1627]]

[Text] Since the 3d Plenary Session of the 11th CPC Central Committee, enormous changes have taken place in the rural situation of our country. The agriculture which had come to a stalemate for a long time has begun to thrive, and a new situation of sustained and steady development has emerged in agriculture. Despite repeated floods and drought which have hit us since 1979, the total output value of agriculture increased at an average annual rate of 5.6 percent. This year an overall bumper harvest was again reaped in agricultural production. It is estimated that the total output of grain will be over 200 billion jin more than last year's figure and that of cotton will increase by more than 600 million dan and the other various industrial crops will almost set a record. Along with the development of production, the farm produce and sideline products as well as raw material for industry which agriculture supplies to the state are increasing in quantity day by day and their income is also steadily increasing, and remarkable improvements have been achieved in their standards of living. Of the poor and backward regions throughout the country, there are 10 regions which have the greatest difficulties, totaling 231 counties. At present, except for a small number of regions which still have great difficulties in the northwest and southwest, most of the remaining regions have solved or basically solved the question of having enough to eat and wear. Of these, there are 23 counties whose average per-capita income increased from about 50 yuan to more than 150 yuan last year. Economically speaking, many famous poor counties and regions have come into their own within the last 1 or 2 years. They not only no longer ask for subsidies of relief and grain resold to them by the state but have paid off their debts and furthermore have even sold their farm produce and sideline products to the state instead. Such changes have seldom been seen since the founding of the PRC and also are contrary to our expectations.

Why are the changes in the countryside so fast and great? The answer is becoming clearer and clearer and also increasingly widespread. This is because since the 3d Plenary Session of the 11th CPC Central Committee, the party has adopted a series of correct rural economic policies, that is, what counts is the implementation of the system of contracted responsibilities with payment linked to output which has brought the enthusiasm of hundreds and millions of peasants into play.

The difference between the agricultural production responsibility system which has been introduced in rural areas in recent years and the other responsibility system, such as the short-term work contracts and management with fixed output quotas which were practiced during the period of cooperation, lies mainly in the method of contracted responsibilities with payment linked to output. The turn from not linking payment to output to linking payment to output has not only added a new form to the production responsibility system in our rural areas but has also brought about a qualitative change in the responsibility system itself. With the development and improvement of the responsibility system, a historic change has begun in China's agricultural production and rural economy.

The system of contracted responsibilities with payment linked to output is characterized by the fact that the collectively owned land is respectively contracted out to commune members for farming with payment made according to output. The heart of this matter is the word "contract." Contracting responsibilities with payment linked to output links up the labor of the working people closely with their production results, combines responsibility, authority and benefit and proceeds to effectively overcome the drawbacks of egalitarianism and the practices of doing things in a massive and unplanned way while working and issuing harmful and arbitrary directives; it enables the peasants to have decisionmaking power, to become both producers and managers and the real masters of the cooperative economy and to give full play to their initiative and creativity. Contracting responsibilities and linking payment to output is the combination of the unified and separate management and has universal adaptability and a diversity of forms. Not sticking to one pattern, this method can suit local circumstances, under which whether the production targets are to be carried out in a centralized or decentralized way hinges on the situation. In this way, it can correspond to the intricate situation of China's vast countryside which varies from place to place and enables the relations of production and the productive forces in rural areas to fit in with each other. It is precisely for this reason that the system of contracted responsibilities with payment linked to output is warmly welcomed by hundreds of millions of peasants and is continuously developing in the course of practice, accompanied with the emergence of such different forms as assigning responsibilities to each group and linking payment to output, assigning responsibilities to each labor and linking payment to output, fixing output quotas for individual households and assigning the households full responsibility for task completion. The CPC Central Committee has always respected the creative initiative of the masses, upheld that practice is the only criterion for testing truth, earnestly summed up the new experience and new creativity of the masses with the development of practice and constantly substantiated, revised and perfected the policies concerning the agricultural responsibility system. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" pointed out: "There is no rigid pattern for the development of the socialist relations of production. At every stage our task is to create those specific forms of the relations of production that correspond to the needs of the growing productive forces and facilitate their continued advance." The system of contracted responsibilities with payment linked to output is a new form of the socialist cooperative economy with Chinese characteristics. It is the creation of hundreds and millions of peasants who, under the direction of the spirit of the 3d Plenary Session of the 11th CPC Central Committee, have emancipated their minds, practiced in a bold manner and explored step by step. It is the result of correcting the "leftist" mistakes and of bringing order out of chaos and the product of earnestly summing up our historical experience, both positive and negative. The practice of the system of contracted responsibilities with payment linked to output is a great pioneering undertaking of the Chinese people. It has a bright future which should not be underestimated.

The people have a quick or slow as well as a deep or superficial understanding of the far-reaching significance and great role of the system of contracted responsibilities with payment linked to output. This is completely understandable. Under the influence of "leftist" ideology, in the past we blindly pursued the form of "large in size and collective in nature" and mistook that while engaging in the socialist collective rural economy, we had to adopt the form of doing labor in a concentrated way and of distribution according to work. As time passed, this form became a "set pattern" which shackled the people's minds and no one dared to overstep the minefield even one step further. Those who aired divergent opinions and tried some different things in light of actual conditions would be criticized as committing "errors in the political orientation and line." In the past we criticized the "three freedoms [private plots, a free market and responsibility for one's profit or loss] and one contract" and "fixing output quotas for individual households," and we did so for so many years that people were scared at the sight of the words of "contract" and "household" which almost became a "conditioned reflex." The people would be scared by the mention of fixing output quotas for each group; they would be more scared by the mention of fixing output quotas for individual households; and they would be most scared by the mention of assigning the households full responsibility for task completion. Therefore, the fact that the majority of comrades remained unconvinced of the application of the system of contracted responsibilities with payment linked to output, were irresolute in action and even resisted it was a matter of understanding. In the last few years, much controversy has emerged on the issue of the responsibility system but the CPC Central Committee has always earnestly heeded different opinions, constantly conducted investigations and study and never compelled and criticized any people. On the contrary, it has all along put stress on suiting measures to local conditions and on the coexistence of diverse forms and allowing the masses to make their own choice in a democratic way and paid attention to preventing the practices of acting on impulse and of having a single solution to diverse problems. Practice is a classroom in which people can receive the best education. Through many years of practice, the majority of comrades have realized from objective facts that the policies of the party Central Committee are correct, and they have increasingly identical views on this issue. At present a small number of people have still not understood the system of contracted responsibilities with payment linked to output. We hope that they will go deep into the realities of life, conduct investigations and study, heed the opinions of the masses and have a look at the fine situation of the countryside, and we are sure that this will educate them and bring about a change in them and that they will deepen their own understanding. The introduction of the system of contracted responsibilities with payment linked to output is the demand of hundreds and millions of peasants and the trend of historical development. In his report to the 12th party congress, Comrade Hu Yaobang pointed out: "The production responsibility system set in various forms in the countryside in recent years has further emancipated the productive forces and it must be adhered to for a long time to come. The thing for us to do is to gradually perfect it on the basis of summing up the practical experience of the masses. In no case must we make rash changes against the will of the masses, still less must we backtrack."

The widespread implementation of the system of contracted responsibilities with payment linked to output has put an end to the situation in which agriculture has been at a standstill for a long time. A series of new things with internal relations have emerged in an endless stream over time, and the rural economy has entered a new stage of flourishing and vigorous development.

The rapid growth of agricultural production and the improvement of labor productivity in agriculture has saved much surplus manpower, promoted diversified undertakings, raised the commodity rate of farm produce and sideline products, and as a result, the demands of the peasants for market supplies have also increased. Developing a diversified economy is of great significance in changing the features of China's agricultural production. China has a vast territory with insufficient arable land but with very abundant usable agricultural resources. While ensuring that grain crops should be planted in the cultivated land suitable for growing grain crops and ensuring a steady increase in grain production, we must go all out to operate the diversified undertakings in a big way. This will not only contribute to the full utilization of the surplus manpower and natural resources but will also help promote the further development of grain production and will thus turn the human talents and land and other material resources to good account.

With the development of the diversified undertakings and commodity production, there have emerged in recent years batches of specialized households and households doing specialized jobs with special technical skills and management ability, some of which are developed on the basis of household sideline production; others contract some production tasks of the collectively run diversified economy; and still others form new combinations according to the principles of voluntary participation and mutual benefit. These specialized households or specialized groups are relatively small in scope of operation and production and have therefore some strong points: 1) Being convenient for tapping the potentials of manpower and of the means of production, absorbing more manpower and auxiliary labor in particular and putting the simply constructed construction projects and facilities to maximum use; 2) corresponding to the existing technical ability, experience and managerial techniques of the producers and providing ample scope for the broad masses of peasants to display their intelligence and wisdom; and 3) easily economizing on funds, reducing energy consumption and promoting environmental protection and the ecological balance. In sum, they are characterized by the fact that they are small in scope and require less investment but promise quicker and bigger results with a high commodity rate. They are in keeping with the economic and cultural level of the Chinese countryside at the present stage and are a good form for developing a diversified economy and commodity production. The combination of the form of specialized household or specialized group with the great mass fervor for studying and applying science which is in the making universally among the peasants will push agricultural production and the whole rural economy forward to further prosperity.

With the growth of the production of specialized households and specialized groups and the improvement of their operational techniques, the realization of specialization and socialization of some links of the process of production will surely become a necessity. Every step forward in the specialization and socialization of production should be followed and even anticipated by communications and transport, commerce and other service trades, otherwise it will lag far behind the demands of the development of the situation. The application of the system of contract responsibilities with payment linked to output in rural areas has solved the question of production and distribution but has not yet solved the question of circulation. At present, the enthusiasm of the peasants for developing commodity production has been aroused but the work of the various departments concerned still lags far behind and the most conspicuous one is that the circulation link is poor. The failure to transport and market farm produce and sideline and native products caused overstocking of products in producing areas and a shortage in goods supply in marketing areas, made batches of fresh and live products go moldy and rotten while the industrial products needed by the peasants were hard to buy. This contradiction is becoming more and more acute. Any undesired solutions to this issue will bring about renewed setbacks to the enthusiasm of the peasants, which has until now run high. We must attach great importance to this matter and solve it in real earnest.

At present, the system of contracted responsibilities with payment linked to output has been widely implemented in rural areas. The work in the future is mainly to preserve the relative stability of the production responsibility system and to perfect and improve it in an orderly manner. However, we must not shut our eyes to the fact that at present a trend has gradually manifested itself, that is, the system of contracted responsibilities with payment linked to output is expanding from the poor and backward regions to other regions and even to economically developed regions, from planting industry to forestry, animal husbandry, sideline occupations and fishery, from agriculture to the various sectors of the rural economy and further expanding from the rural areas to small cities and towns and to commerce, service trades, the industry run by the communes and their subdivisions and to scientific units. Furthermore, proceeding from the objective demands of the development of production and with the advance of the rural economy toward the direction of specialization and socialization, the demands for establishing various combinations set in different forms are bound to arise, such as the combination of specialized production, that of supply and marketing, that of production, supply and marketing and that of technical services, and some combinations even may break through the limits of the existing communes and their subdivisions. Just as Comrade Hu Yaobang predicted in his report to the 12th party congress: "In the not too distant future, there will emerge in our rural areas an improved cooperative economy, with a diversity of form, which will be able to make full use of the advantages in light of the local conditions and facilitate the large-scale adoption of advanced production measures." Moreover, the first starting point of all this is the system of contracted responsibilities with payment linked to output. Being full of vitality and in the ascendant, the system of contracted responsibilities with payment linked to output has Chinese characteristics and is thus where our great hopes lie.

DEVELOPMENT AND PERFECTION OF THE ECONOMIC RESPONSIBILITY SYSTEM IN INDUSTRY

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 17-20

[Article by Zhou Taihe [0719 1132 0735]]

[Text] The economic responsibility system in industry is developed on the basis of the experiments of the expansion of the decisionmaking power of enterprises, which were carried out in selected enterprises after the 3d Plenary Session of the 11th CPC Central Committee. It is an administrative system in production and operation which closely combines responsibility, authority and benefit with raising economic results of the whole society as its objective under the guidance of state planning. At present the enterprises which are carrying out the economic responsibility system constitute more than 80 percent of the industrial enterprises throughout the nation. After 1 year and more of exploration and practice, the vast numbers of cadres and staff and workers of the various localities, departments and on the industrial front have a clearer understanding of the economic responsibility system in their guiding thinking and the contents and forms of the responsibility system have also developed. In particular there have emerged such advanced models as the Shoudu Iron and Steel Company, which set an example for us all. Over 1 year and more, the economic responsibility system has developed in the following ways:

1. Persisted in closely combining responsibility, authority and benefit and given first priority to the responsibilities for which the enterprises are responsible to the state. The economic responsibility system started with the implementation of the financial tasks and for this reason it is called the "contract system plus rewards." Later such units as the Shoudu Iron and Steel Company advanced the guiding thinking for correctly carrying out the economic responsibility system, that is, we must put stress not only on the limits of authority and interests of enterprises but above all also on the responsibilities for which the enterprises are responsible. They put the overall fulfillment of state plans in first priority and looked upon the practice in which the state should receive the largest share in distributing surplus revenue as the most important responsibility of enterprises. Many enterprises support the formulation of the Shoudu Iron and Steel Company: the economic responsibility system should take responsibility as its core, set the limits of authority and the size of

benefits according to responsibility and closely combine responsibility, authority and benefit; one should be granted authority the same size as the responsibility which he bears and he is allowed to share interests the same size as the responsibility which he discharges. As a result of giving prominence to the economic responsibility for which the enterprises are responsible to the state regarding the fulfillment of state plans as the basis for the enterprises to retain the share from profit sharing and stressing that the partial and local interests should be subordinated to the overall interests, the sense of responsibility of the enterprises and the staff and workers is heightened and the enterprises are urged to tap the potential in their internal departments and to devote a lot of energy and efforts to boosting production and increasing revenue.

2. Implemented the economic responsibility system down to each level of the internal departments of enterprises in an overall manner so that the economic responsibility system would develop constantly and intensively. Many enterprises have formulated the general objectives including the various economic and technical targets in reliance on the masses of staff and workers and in accordance with the economic responsibility for which they are responsible to the state, transposed them one by one and then implemented them at each level of the internal departments of enterprises and to every workshop, administrative office, production team and group and individual. Some enterprises are developing in the direction of making responsibility a target and of making examination and assessment enter the stage of data. The Shoudu Iron and Steel Company not only transposes the targets and implements the whole professional work and the enforcement of the rules and regulations down to each individual but also implements the practice of each level contracting for state assignments and ensuring their fulfillment between different units and different posts down to each individual and links strict examination and assessment with rewards. The responsible departments and financial departments of enterprises of some places are cooperating closely and have put a stop to the practice of singly examining the profit targets of enterprises and instead are carrying out an overall check-up of output, quality, profits, consumption and costs. All these have played a promoting role in improving the managerial techniques of enterprises.

3. The forms of profit sharing should be suited to local conditions and be flexible and diverse and no uniformity should be imposed in this respect. The enterprises which were involved in the experimental work of expanding the decisionmaking power in 1979 basically practiced a circulatory proportion method of base plus increase. Last year a State Council document stipulated seven different methods. The comrades of the various provinces and municipalities paid attention to constantly exploring and summing up the practical experience and persisted in proceeding from reality and seeking the forms of profit sharing for different trades and enterprises so as to better mobilize the enthusiasm of the enterprises of various types and correctly handle the relationship between the state and the enterprises. Financially speaking, some places adopt the method of retaining total revenue among the responsible bureaus and the latter again practice a form of the profit contract system among enterprises. This method can integrate

the two forms and make up for each other's deficiencies, and the gains are satisfactory. Some places define different forms of profit distribution in light of market conditions, the importance of the tasks of technical transformation and the changes in the production conditions.

4. The scope of the introduction of the economic responsibility system was continuously expanding. The economic responsibility was not only implemented down to the workers on the front line in production but the practices of assessment and of rewards and penalties were also carried out among leading cadres, technical and professional personnel and auxiliary workers on the basis of clear and definite economic responsibility. In some places the economic responsibility system was set up in the responsible industrial bureaus and even in the units at the municipal level. Weifang in Shandong Province has established the economic responsibility system throughout the municipality, ranging from the leading departments and leading cadres to the enterprises and their staff and workers.

5. The link of distribution was turned into that of production and the enthusiasm of the enterprises and of their staff and workers has gradually led to strengthening operations and production, to carrying out technical innovation and technical transformation and to tapping potential in the internal departments of enterprises. The enterprises attach importance not only to production but also to management and technical advances and shift the focus of work from undertaking new construction projects and expanding existing projects to expanded reproduction which gives prominence to intension. This benign cycle from distribution--tapping potential--increasing revenue to redistribution--retapping potential and again increasing revenue impels the enterprises to continuously raise their economic results and is therefore an important result of the development of the economic responsibility system.

In sum, through 1 year and more of practice, the economic responsibility system has begun to embark on the road of healthy development. At the forum on the industrial economic responsibility system of the five provinces and municipalities convened by the Office for Structural Reform under the State Council and the State Economic Commission, six standards for examining the results of the economic responsibility system were formulated: 1) Whether or not the various targets passed down in state plans are fulfilled in an overall manner (quality and costs in particular); 2) whether or not the economic effect is improved remarkably; 3) whether or not the interests of the state, the enterprises and the individual are taken into account while ensuring that the state should receive the largest share in distribution of surplus revenue; 4) whether or not the principle of from each according to his ability, to each according to his work is implemented among the staff and workers; 5) whether or not the various rules and regulations and the basic work are established and perfected; and 6) whether or not the various policies and stipulations of the state are observed. Some enterprises which are run well have achieved tangible results in this respect.

However, there are still some problems in our work because it is not too long a time since the responsibility system was introduced, and its development is still not even. The problems are manifested mainly by the fact that the people still have an insufficient understanding of the essence and great significance of the economic responsibility system: that the economic responsibility system has not yet really been set up in the internal departments of most of the enterprises; that the decision-making power of enterprises in operations and management has not yet been completely implemented; that the enthusiasm for technical innovation and technical transformation has not yet been extensively aroused; that egalitarianism in distribution issue is still serious; that with regard to the relationship between the state and the enterprises, the policy of rewarding those who are diligent and penalizing those who are lazy has not yet truly been embodied, and so on. In order to further strengthen and perfect the economic responsibility system, we hold that the following problems need solutions:

1. We must further deepen our understanding of the economic responsibility system.

The aim for industrial enterprises to carry out the economic responsibility system is to suit the demands of socialized mass production, to further emancipate the productive forces and to carry out partial readjustment of the relations of production. In regard to the relationship between the state and the enterprises, it has put an end to the situation in which in the past, excessive and overrigid control was imposed on the enterprises; all revenue and expenditure were handled by the state in a unified way and everybody was eating "from the same big pot." In the internal departments of enterprises, the previous drawbacks of egalitarianism which were characterized by the fact that no distribution was ever made between those who did a good job and those who did a poor one were overcome and the situation was halted in which particular attention was paid to production at the neglect of operations and management and output and output value were exclusively grasped at the expense of technical advances and economic results. Therefore, for industrial enterprises to carry out the economic responsibility system is an important component part of the reform of China's economic system and will expedite the reform of the administrative system of all enterprises and of the production, circulation and distribution systems. In his report to the 12th party congress, while fully affirming the economic responsibility system, Comrade Hu Yaobang pointed out: "To bring the initiative of enterprises and of the working people into play, we must earnestly implement a responsibility system in the operation and management of both state and collective enterprises." "Although industry and commerce are vastly different from agriculture, the application of the economic responsibility system (including the system of responsibility for profit or loss in some state enterprises) similarly helps to implement the Marxist principle of material benefit, to heighten the workers' sense of responsibility as the masters of the country and to promote production." Comrade Chen Yun also said that the transformation carried out in the 1950's allowed to exploitation, that is, the capitalists were not allowed to exploit the workers. In the present reform the people are no longer allowed to eat "from the same big pot" and the reform is aimed at breaking this sort of old conventions, such as the "same big pot" and "iron rice bowls" and at practicing the principle of more pay for more work, less pay for less work and no pay for no work. The significance of this reform is not inferior to that of the transformation of privately owned industrial and commercial enterprises. These important expositions raise the significance of the economic responsibility system to the higher plane of theory and are of important and guiding significance in deepening our understanding of this issue and in expediting the intensive development of structural reform.

The agricultural production responsibility system has achieved noticeable results. After the economic responsibility system has been carried out really well, it will also have boundless prospects. It must be noticed that the economic responsibility system and the agricultural production responsibility system have something in common. This all started with restructuring the administrative system, readjusting the relations of production, breaking the practice of eating "from the same big pot," overcoming egalitarianism, implementing the principle of distribution according to work done and finding solutions to the issue of the inner dynamic force for developing production. However, it must be also noticed that industry and agriculture are vastly different. First, they are different in the system and ownership and second, the socialization of industrial production is high in degree, different enterprises are closely related, and the development of production are restricted by many external conditions. Therefore, compared with the agricultural production responsibility system, the economic responsibility system in industry is much more complicated. How to do a good job in the economic responsibility system in industry in light of this characteristic has become an important issue which demands greater efforts, earnest study and thorough exploration from us all.

2. We must correctly implement the principle of the leading role of the planned economy and the supplementary role of regulation by market mechanism.

In China's economy, priority is given to the planned economy. As the basic unit of economic activities, an enterprise must comprehensively fulfill state plans and do a better job in the economic activities of the enterprise in accordance with the requirements of state planning. To carry out the economic responsibility system, it is necessary to closely integrate it with state plans and to take the overall fulfillment of state plans as the most important economic responsibility of enterprises. We must not belittle planning just because we stress enlivening the economy and we must also not put enterprises under excessively rigid control just because we stress planning. The responsible departments at various levels must regard the overall fulfillment of state plans as a prerequisite for the enterprises to retain profits from profit sharing and strictly examine the quality of the fulfillment of state plans by the enterprises. At the same time, it is also necessary to implement the limits of authority of enterprises in planning. We must go deep into the realities of production, study new conditions and seek solutions to new problems, study the size of authority in planning which should be given to the enterprises of different types and study how to bring the initiative of the enterprises into full play under the guidance of the state plans and how to combine the economic responsibility system with planning so that the plans can be substantiated and perfected as required in the course of their implementation.

Being economically responsible, the enterprises must have various degrees of authority in planning on the one hand and must also have a certain share of the power to market their products through their own channels. Under the guidance of planning and the condition that the supplementary role of regulation by market mechanism is given full play, the power to market the products through one's own channels functions in two aspects. The first role is to enable the enterprises, through the activities to market their products through their own channels, to keep abreast of the market trends in good time, to ensure direct contact between production and marketing and the integration of production and marketing, to foster a good operational style of thinking about the interests of the users and being responsible for the consumers, to enthusiastically develop new products and to better meet market demands, and the second role is to enable the enterprises, by marketing part of their products through their own channels, to conduct cooperation and to make up for the deficiencies in the planned material supply so as to ensure the normal operation of production. For this purpose, except those products which are not allowed to be marketed through the channels of the enterprises by state stipulations, including the products which are put under state unified purchase and sale and the products which are strained in supply and short in demand, the enterprises should be granted a certain portion of the power to market their products through their own channels. We must, through practice, sum up a set of methods which will both persist in the leading role of the planned economy and fully arouse the enthusiasm of the enterprises and of the staff and workers and raise economic results.

3. We must put the focus of work on the implementation of the economic responsibility system down to each level in the internal departments of enterprises.

Implementing the economic responsibility system down to the internal departments of enterprises should be regarded as the key link of the present overall reorganization of enterprises. In the course of reorganization, it is necessary to transpose one by one the economic responsibilities for which the enterprises are responsible for to the state and implement them down to every workshop, production team, group and individual and set up a set of economic responsibility systems which form a complete set vertically and horizontally and integrate both the higher and lower levels in accordance with the principle of combining responsibility, authority and benefit; it is necessary to strengthen the basic work, establish and perfect the various administration, examination and assessment systems as well as the rewards and penalties. In regard to issuing bonuses, we must not try to top the ceiling of norms and try not to indulge in egalitarianism among units and ensure that there will be increases and decreases in bonuses with regard to individuals. Democratic management must be strengthened and the vast numbers of staff and workers must be aroused to discuss the major decisions on the production and operations of enterprises, the distribution and utilization of the funds at the disposal of enterprises and the reform of the administrative system and rules and regulations, and then this should be submitted to the staff and workers congresses for examination and approval, and their implementation should be put under the supervision of the staff and workers congresses. It is essential to combine the stringent economic responsibility system with the sense of political responsibility of a high level through painstaking and meticulous ideological and political work. At the same time, it is necessary to readjust the leading bodies well in accordance with the requirements of cadres becoming more revolutionary, younger in age, more knowledgeable and specialized.

4. We must correctly handle the interest-distributing relationship between the enterprises and the state.

The application of the economic responsibility system has put an end to the financial system under which all revenue and expenditure are handled by the state in a unified way, readjusted the relationship among the three--the state, the enterprises and the individual, mobilized the initiative of the enterprises and of the staff and workers and raised economic results. However, owing to diverse reasons, at present the profits which the enterprises ought to hand over to the state have decreased somewhat and there has been a shortage of funds for the key development projects which the state must urgently carry out. In order to attain the strategic objective by the end of this century and ensure the key development projects which have a bearing on the overall situation, in a period of time to come we must appropriately concentrate our financial resources. To do this, the enterprises are urged to further implant the idea of "coordinating all the activities of the nation like moves on a chessboard," uphold the principle that the state should receive the largest share in the distribution of benefits between the state and the enterprises, earnestly arrange well the proportion of profit sharing for the enterprise and perfect the methods for distributing revenue.

We must stabilize and implement our economic policies on the basis of summing up experience. With regard to the seven methods of profit sharing formulated by the State Council, the various localities and departments must proceed from reality and adopt different forms of distributing interests among different types of trades and enterprises in light of local conditions and not find a single solution to diverse problems. Seen from the initial practice of the various localities, the implementation of profit sharing by whole trades will be conducive to making clear the responsibilities of the responsible departments of enterprises, to readjusting the unfairness in the distribution and allocation of profits between different enterprises and to promoting the technical transformation of the internal departments of enterprises. The counties which have abolished the industrial bureaus in the course of the organizational reform may also practice the method of unified profit sharing or profit contracting with the county economic commission as the unit. This will contribute to simplifying the administrative structure and redistributing the amount of profits between different enterprises. After being approved by the State Economic Commission and the financial departments, large-sized enterprises with strong leading bodies and sound basic work, the tasks of hard technical transformation which accord with the demands of the development of the state are also allowed to practice the contract system of handing over profits to the state progressively on a trial basis and it should not change for some years while it is fixed. A section of small-sized enterprises may introduce the form of handing over income tax to the state and assuming sole responsibility for their own profit or loss. But no matter what form is practiced, a unit can adopt only one method.

While defining the proportion of profit sharing, we must implement the principle of rewarding those who are diligent and penalizing those who are lazy. As for those enterprises which are poorly operated and produce low economic results due to subjective reasons, their proportion of profit sharing should be appropriately reduced; with regard to the enterprises with strong leading bodies, satisfactory operations and high economic results, their proportion of profit sharing should be appropriately increased. At present the practices of violating financial and economic discipline, illegally retaining profits, indiscriminately apportioning costs, repeatedly drawing money and taking a double share of money should be resolutely corrected.

5. We must integrate the perfection of the economic responsibility system with the technical transformation of enterprises.

Doing a good job in the technical transformation of enterprises and promoting technical advances is the key link in steadily raising economic results and ensuring the smooth development of the national economy. At present, the technology and equipment of many enterprises are quite backward, their energy consumption is high, product quality is poor and economic results are low. The introduction of the economic responsibility system demands a year-by-year increase in the profits which the enterprises ought to turn over to the state and an increase in the funds retained by enterprises. This will urge the enterprises to do a good job in technical transformation. At the same time, the funds retained by enterprises will create conditions for and provide possibilities for the enterprises to carry out technical transformation. In order to better lead the enterprises in accelerating the pace of their technical transformation, it is necessary, on the basis of deepening their understanding, to help the enterprises to genuinely use their depreciation funds and funds for production development in the technical transformation and upgrading of equipment of enterprises. At present, some enterprises use the funds for production development and even their depreciation and overhaul funds in building dormitories for the staff and workers and in repaying private debts owed by the staff and workers. Their funds for technical transformation are solved by relying mainly on bank loans. This practice is understandable for a short time but we must not do this for a long time. Otherwise, it will produce a harmful impact on production. We must redistribute and utilize in a good manner the funds for production development and the innovation and transformation funds which are scattered among the various enterprises. At the same time, a better job should be done in the programs for the technical transformation of the trade, and the technical transformation of the trade and enterprises should be carried out in a planned and good way in key units by stages and in groups. We must carry out the practice of good quality, high prices step by step and encourage the enterprises to continuously improve product quality and to enthusiastically develop new products.

For industrial enterprises to carry out the economic responsibility system is a new task. To steadily develop and perfect it, it is necessary to offer more effective leadership. The various localities and departments must pay close attention to the promotion of the economic responsibility system in industry, put it under overall planning and offer classified guidance to it as we have done in regard to the production responsibility system in agriculture. At present, we must above all do a good job in the perfection of the economic responsibility system of the medium and large-size enterprises. At the same time, we must earnestly grasp typical cases and sum up and spread our experience. We must further consolidate and develop the various ongoing reforms, actively create the needed external conditions for the enterprises and push forward the healthy development of the economic responsibility system.

FACED WITH A NEW SITUATION AND NEW PROBLEMS, LIGHT INDUSTRY HAS TO TAKE ON A NEW LOOK AND ATTAIN A HIGHER LEVEL

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 21-24

[Article by Yang Bo [2799 3134]]

[Text] Since 1979, in the light of the policy issued by the CPC Central Committee on vigorously developing consumer goods production, light industry development has been accelerated. The gross light industry output value has increased by 10 percent annually over the past 3 years. The quality of products has improved and we have more varied goods. There was a commodity shortage in the market for a long time in the past. This situation has been basically changed. Formerly, people rushed to purchase goods, but now they are keeping their money and buying selectively.

This is the result of the implementation of the line, principles and policies put forward by the 3d Plenary Session of the 11th CPC Central Committee and the national economic readjustment, restructuring, reorganization and upgrading. It is also an important sign that the national economic situation is getting ever better.

Under this excellent situation, new problems have appeared in light industry production; principally, some light industrial products are overstocked and unmarketable. How can we deal with this problem? Some comrades think that this is the result of a surplus of products manufactured by light industry and that we should cut production. I do not think we should speak in such general terms. At present, there is a small number of products in excessive supply, because these products, such as cigarettes and wine, are manufactured by small factories, not in a planned way. We should cut their production. Generally speaking, we cannot consider that there is overproduction and that light industry has been fully developed. Our light industry has yet to be further developed. Social purchasing power in the last 3 years has increased by an average of 14.7 percent annually, which is higher than the average annual increase of 14 percent of light industry production, and much higher than the 10 percent output increase in factories under the administration of the Ministry of Light Industry. The production of consumer goods falls far short of the requirements of the people, who have more money saved up at home. According to rough calculations, the total yearly output value of factories under the Ministry of

Light Industry is only about 60 billion yuan (including a proportion of means of production and not including textile and other consumer goods), which is about 60 yuan for each person in the country. But the nation's bank savings reached 62 billion yuan by the end of August this year, not counting a prodigious sum of cash kept in people's homes. We should manufacture more products to meet their demands.

But why are some products overstocked and unmarketable? I think that it is mainly because the quality and variety of the goods are poor and cannot satisfy market demand. One reason why commodities are overstocked in some places and out of stock in others, or overstocked in urban areas and out of stock in rural areas, is blocked circulation channels and bad marketing. There was a commodity shortage for a long time in the past. People had little choice when shopping. But now the situation has changed. Production has increased, there are more goods in the shops and people have more money. The "seller's market" has started to change into a "buyer's market." So customers have become more choosy. Formerly, people rushed to buy things the year round. But now they are making seasonal choices. These new problems have surfaced in light industrial production. As customers put it: "I don't want what you offer, but you don't have what I want."

How can we run light industry in the face of this new situation and the problems which have appeared? We should earnestly do a good job in changing this situation and improving product quality, and strive to create a new situation in light industrial production in accordance with the instructions issued by the 12th party congress and with the real situation.

First, to change the situation it is necessary to change the spiritual phenomena of staff and workers, and in particular leading cadres at all levels, and to arouse their enthusiasm in line with the development of the new situation. Second, it is necessary to improve the quality and variety of light industrial products. To raise their standard means upgrading technical and management standards.

Specifically, we should do a good job in the following points:

1. Change the Guiding Ideology in Line With the New Situation

At present, the main changes in guiding ideology should be: 1) We should change the way of stressing production speed and taking economic results highly by combining production speed with economic results. We cannot ignore production speed, but we should stress economic returns and maximize economic results by reducing consumption of labor and materials to the minimum. To attain economic results, we should stress not only the state's interests and the constant increase in accumulated funds for the state; we should also manufacture products which are marketable, with good quality and lower prices, and take care of customers' interests. As Comrade Zhao Ziyang said, we should blaze a new trail of more practical speed, better economic returns, and more benefit to the people. 2) The viewpoint of stressing output value and quantity of products and taking their quality and variety lightly should be changed by seeing their quality as of primary importance and creating new varieties. 3) The viewpoint of laying stress on production and not paying sufficient attention to management must be changed by doing a good job in production and management, and strengthening marketing, service and market forecasting. 4) The viewpoint of laying stress on urban areas and paying insufficient attention to rural areas must be changed by taking account of the demand of both urban population and even more of the 800 million peasants. All products are to be geared to the needs of the peasants. Comrade Mao Zedong said that the extensive rural areas constitute our principal market. With the development of agricultural production and the increase of peasants' earnings, the market demand in the rural areas will increase constantly. We should be more clear on this point. 5) We should change our viewpoint of laying stress on expanding construction and paying insufficient attention to technical transformation by relying on scientific technology to progress and by stressing the expansion of the existing reproduction, concentrating principally on the technical transformation of present enterprises and tapping the existing production potential in enterprises. 6) We should change our viewpoint from emphasizing present interests and forgetting future ones to tightly grasping the present production and drawing up a long-term plan for development. We should map out a plan for light industrial production, set specific targets and adopt practical measures in line with the instructions issued by the 12th party congress for attaining the goal for quadrupling the total annual output value of industrial and agricultural production by the end of this century, and lay a solid foundation in the first decade in order to accumulate forces and create conditions for reviving the economy in the second decade.

To realize the above six changes, it is highly important for us to conscientiously change our guiding ideology to one of sincerely serving the consumers. While carrying out socialist production, our task is to serve consumers wholeheartedly. These objects of our service may be summarized by the figures "8, 2, 5, 3, and 6." "Eight" stands for the 800 million peasants who make up the majority of the population. We should constantly take their requirements into consideration by manufacturing products to meet their demands. "Two" stands for the 200 million-strong urban population. Previously, we took this aspect more into account, but not enough. "Five" represents the 500 million women. Why do we talk about the women separately? To speak in general terms, women require a better assortment and style of goods than men. Furthermore, women always take care of or arrange all sorts of things related to the household. So we give priority to the demands of the 500 million women. The figure "3" represents the 300 million children who are our successors and flowers of the motherland. At present while we are encouraging family planning, most of the purchasing power of parents is devoted to their only son or daughter. We should take their all-round demands into account. There are bright prospects for toy manufacturing only. "Six" can be interpreted as the 60 million people from national minorities. There is a great variety of consumer goods they require. Therefore, we should strive to do a good job in production in order to meet their demands. In brief, we are sure that light industry production will further develop if we wholeheartedly serve consumers by adopting all possible measures and blazing a new trail.

2. Do a Good Job in Improving Quality and Variety

We have been stressing quality first in production for years. However, this problem has not yet been solved in practice. In the future, we should stress quality and variety in production. This is the key to ensure a new level for light industry production. While talking about the speed and quantity, we should not forget the quality and assortment, and we should not reduce output value and quantity of products alone. What most of our comrades say is true: "Quality is a vital force and assortment will bring a bright prospect." Whether a factory is well run or not and whether or not it will enjoy great prestige among the customers, depends on whether product quality meets market demand. Even an enterprise will experience the same thing. Therefore, we should strive to manufacture high quality, new products of famous brands.

We should map out a plan for creating famous brand, high quality and new products. We should analyze the present status of products manufactured by various trades, arrange the problems in order to importance and urgency and set specific goals for production. All localities should manufacture more famous brand products by enhancing their superior role. We should formulate specific stipulations and adopt specific measures in order to carry out the completed plan within a limited time and to come up to standard. Shanghai and Jiangsu have formulated the "four generations" of production, reserves, research and planning which are worth being encouraged.

The quality of products and assortment of goods should meet the demands of the two markets, namely, the domestic market, which is the principal market, and the international market. The demands of these two markets are different. Domestically, the rural and urban markets are also different. So we should discriminate between them. What comrades in Shanghai say is true: The quality of products and variety of goods for export should be in line with international standards, while those for the domestic market should meet the consumers' requirements. We should take the international standard and market demand into account if we intend to break into the international market with our products, and make them more competitive. Domestically, the standard of all products must also be raised in line with the actual requirements and purchasing power of the consumers.

In order to improve quality of products and increase the variety of goods, it is imperative to grasp technical transformation in existing enterprises. The quality of products can only be improved by advanced equipment. Previously there was a slogan: Manufacture products of the 1970's with equipment manufactured in the 1940's or 1950's. The spirit is good but it is unworkable as a whole. As materialists, we should stress material conditions. To improve the quality of products and increase the variety of goods, we should carry out technical transformation in enterprises, replace old equipment with new, and introduce new means of production, new technical equipment and new technological processes. If we fail to rely on the advanced scientific technology or to grasp technical transformation in existing enterprises, and if we still preserve the old equipment, techniques, technology and products, then the efforts we made for laying a solid base, accumulating forces, creating conditions for the 1980's and reviving the economy in the 1990's, will all come to nothing.

To carry out technical transformation in enterprises, we should stick to the policy of self-reliance, by depending mainly on our own strength and introducing advanced technology and equipment from abroad. As there are a large number of small and medium-sized enterprises in light industry, which need less investment and produce quick economic results, it is necessary and possible to use a bit more foreign investment for introducing advanced technology and equipment. We should do well in working out a plan and carry it out by stages and in groups devoting efforts to key projects. We should do practical research properly and should not do it on too large a scale or overextend the battle line, and should avoid acting blindly.

To grasp scientific research, we should train scientific and technical personnel and employ them properly. The number of scientific and technical personnel in light industry departments is small compared with other departments. This does not suit the needs of the transformation or the raising of standards. According to statistics, scientific technical personnel under the Ministry of Light Industry of the country make up 1.06 percent of the total number of staff and workers; among these, the technical forces in the Second Light Industry Ministry are even weaker. We should make up our mind to gradually change this situation. First, each enterprise should train technical personnel in a planned way. Second, more scientific and technical personnel should be demanded from the department responsible for the work. Thirdly, help should be sought from fraternal departments. Fourth, talented people who have studied by themselves should be promoted from among staff and workers. Fifth, existing scientific technical personnel should be properly employed and given refresher courses in order to raise their level. We should also earnestly grasp the training of staff members and workers in order to improve their political and technical quality. Now, there are more personnel in various enterprises than required. We should make a point of arranging training courses for them in a planned way. At the same time, we should run more technical schools devoted to raising their technical levels.

We should adjust product mix and resolutely limit and cut the production of commodities which are in excessive demand. Factories like small cigarette factories and breweries must be closed down. We should adopt both the administrative and the economic measures, but, first of all, we should solve ideological problems.

To grasp product structure adjustment, it is imperative to make specific analyses of supply and demand of all kinds of products. Among plans for goods in excessive supply there are goods in short supply and among plans for goods in short supply there are goods in excessive supply. So we organize priorities according to specific conditions. The method of arranging the problems in order of importance and urgency means making comparisons. When Comrade Chen Yun was in charge of economic work, he repeatedly explained this method and pointed out that it is necessary to make personal investigation, to arrange problems in order of priority, to manufacture products which are in short supply, to cut production of goods which are in excessive demand, to seek truth from facts, to have a good idea of how things stand, to work methodically and to advance steadily. We should earnestly learn from this way of thinking and Marxist work style. As regards existing goods whose supply and demand roughly balance, the product mix should also be adjusted regarding model, specification, quality, variety and type. They should not always remain the same and they should be constantly replenished by other new products. We should adjust product mix because social demand will change frequently. In order to carry out the restructuring of product mix, and to meet the market's various demands, it is necessary to carry out readjustment in some enterprises and their production scale by manufacturing products in small quantity but with different varieties.

While adjusting product mix, upgrading the quality of goods and increasing production of famous brand, high quality products, we should not abandon the production of popular goods of dependable quality and other small commodities. Particularly, we must under no circumstances give up the production of small commodities which are manufactured by the second light industry and are indispensable to the people's livelihood, although they are sold at little or no profit and may even lose money. We should adopt measures and policies to overcome the difficulty in production. We should readjust product mix in line with the national conditions and take the level of purchasing power and the different requirements of our customers into consideration. We should not attend to one thing and lose sight of another.

3. Do a Good Job in Enterprise Readjustment, Strive To Improve Management

Apart from a small number of enterprises, the majority of the enterprises in various localities have not been run properly, and economic results are bad because they fail to establish an essential and strict scientific administrative system. Furthermore, the management in a small number of enterprises is confused which has caused great waste because they do not have regulations. It is impossible to change this phenomenon and to upgrade product quality if this situation goes on. Therefore, we should earnestly and really do a good job in straightening out enterprises and raising administrative standards in light of the instructions issued by the Central Committee. At present, we should tightly grasp work in three aspects: First, we should devote a lot of time and energy to straightening out leading groups in enterprises. The key which decides the fate of an enterprise lies in the leading group. We should promote persons who have both ability and political integrity, do solid work and are in the prime of their life, to the leading group. In short, we should encourage sensible people to run enterprises. Second, we should establish and improve the economic responsibility system and popularize the experiences of the Shoudu Iron and Steel Company in a planned way in line with the specific conditions of light industry. Third, we should grasp the basic work of an enterprise. There are no means of calculation and measurement, original records or consumption quotas in various enterprises. This has caused great waste of raw material and fuel and naturally fails to bring any good economic results.

While straightening out enterprises, it is imperative to grasp capital construction of enterprises, to establish and to improve regulations which are to be strictly observed. If we fail to do so, the economic responsibility system and the improvement of management will come to nothing.

The restructure of enterprise should be linked with the reorganization of trade and the readjustment of enterprise. All trades should carry out readjustment and reorganization of enterprises in a planned way and by stages in light of professional cooperation and rational economic stipulations in order to make the product mix and the organizational structure of enterprise more rational. Factories producing complete sets of machines or parts, specialized factories, cooperative factories and factories within or outside one complex in the same area or outside an area should be organized in a unified way according to trades and services in order to carry out division of labor, to improve quality, and to increase variety. In this way, we can accelerate speed. We should push forward, promote and develop cooperation and do well in this respect according to unified plan and the principle of division of labor and cooperation, equality and mutual interest of each having a role to play.

In the past few years, light industry production has greatly developed and made initial steps. But we should never be satisfied with the existing state of affairs and should not relax our efforts or slow down our speed. We should arouse our enthusiasm, do hard work, study new situations, solve new problems and work conscientiously for our work in line with the instructions issued by the 12th party congress. We should make more contributions to satisfying the increasing material and cultural needs of the entire people and to creating a new situation in all fields of socialist construction for modernization.

STRENGTHEN THE PARTY'S TIES WITH THE BROAD MASSES OF WORKERS

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 25-29

[Article by Yu Yannan [2456 3601 0589]]

[Text] The CPC is the vanguard of the Chinese working class and a product of combining Marxism-Leninism with the Chinese workers' movement. The working class is the class foundation of our party. Whether the party is able to maintain close and inseparable ties with the masses of its own class is a question of vital importance which concerns its destiny and the future of its cause.

Our party has a glorious tradition of maintaining close ties with the working class. It was under the influence of the Russian October Revolution and our own "May 4th" movement and from the rising workers' movement that the earliest communist groups emerged before the party was founded. Many outstanding leaders of our party were long engaged in the workers' movements. They were the leaders of these movements and had flesh-and-blood ties with the broad masses of workers. A number of outstanding elements of worker origin were trained in the struggles and became the backbone and leaders of our party. During the period from the birth of our party to the failure of the great revolution, it was with the participation and support of the broad masses of workers and with the coordination of the developing workers' movements that our party developed and became stronger and various fighting tasks of our party were undertaken and completed. Without the support of the masses of workers, the party would not have existed and developed. However, since the new democratic revolution in our country must rely on peasants' armed struggles and must follow the road of encircling the cities from the rural areas, from 1927 to 1949, the focus of our party's work was shifted to the countryside. During this period, although the party made great efforts to maintain its ties with the masses of workers, due to the restriction of conditions at that time, the relations between the party and the masses of workers were also restricted in various aspects. After the victory of the people's liberation war, the party's focus of work was again shifted to the cities. This provided better conditions for our party to establish close ties with all the masses of workers throughout the country. However, quite a few comrades were not fully prepared in ideology for such an important change. To counter some confused ideas at that time, Comrade Mao Zedong, in his report at the Second Plenary Session of the

Seventh CPC Central Committee, raised the question of whom we should rely on in the struggles in the cities. He pointed out that in the cities, we must "wholeheartedly rely on the working class." Under the guidance of the correct line, policies and principles, our party greatly strengthened its work among the workers and its ties with the masses of workers. Since our party wholeheartedly relied on the working class in industrial production and in work in the cities, great achievements were scored in rehabilitating the country's economy, in socialist transformation of capitalist industry and commerce and in undertaking planned socialist construction as well as in the reconstruction of the cities. During this period, the party also paid special attention to building the party among the industrial workers. A large number of workers were absorbed into the party, which provided good conditions for the party to establish direct ties with its own class.

Relations between the party and the working class were seriously damaged during the "Great Cultural Revolution." Since the rectification and consolidation over the past several years, the status of the party has been greatly improved, the party's prestige is increasing and certain aspects of the ties between the party and the masses of workers have been resumed and strengthened. This is the main aspect of the status of our party. Judging from the situation of some large-scale leading enterprises which were investigated recently, most cadres and party member workers are good and comparatively good. They are able to be politically in keeping with the party Central Committee and are working hard and conscientiously. Most comrades have played an exemplary role in politics and in production and have maintained an honest and impartial work style. Quite a few of them have been elected model laborers and advanced workers by the masses of people. Many comrades enjoy high prestige among the masses of workers. They have strengthened the party ties with the masses of workers with their exemplary actions. However, owing to various reasons, there are still some cadres and party members, judging from the overall situation of the whole country, who have more or less divorced themselves from the masses. Some of them have gone too far in this respect.

1. Some party member cadres have taken advantage of their power and position to seek privileges and personal gains. As a result, the party's prestige among the masses of workers has been seriously damaged and the leadership of the party has been weakened.

Through investigation, we find that many workers and staff members are resentful of such phenomena as "unhealthy work style of the party," the "privileges of cadres" and "accomplishing nothing without asking others for help." They have made very sharp criticism against them. This shows that these negative phenomena, which exist in some party organizations and among some party members, are intolerable, and that the rectification of the party's work style and organization, especially the rectification of party organizations and leading bodies in the enterprises, has become an important task for the whole party.

The masses of workers strongly oppose the unhealthy work style of some cadres. One of the most common problems is the privileges of some cadres in arranging work and allotting houses for their children and relatives. Some cadres have, through various channels, arranged work for their children and relatives or transferred them from posts which require much labor to those which have better working conditions. Some cadres have taken advantage of their power and position to arrange houses for their children or allot more and better houses to them, regardless of the difficulties of the broad masses in this respect. They have thus created a very bad impression among the masses of workers on these problems concerning the immediate and vital interests of the masses. At present, in some enterprises, some workers are not enthusiastic in the forefront of production, especially in those posts which require hard labor. This has much to do with the above-mentioned mistakes of being divorced from the masses committed by some party member cadres. Since some party member cadres have tried to seek more private interests from the masses, the close relationship between the party and the masses of workers has been seriously damaged. Some old workers said: "In the past, the cadres always did as they said, but now, some cadres do not care for the masses. They stretch out their arms to wherever there is profits. How could people listen to them?" There are also some party member cadres who do not practice democracy in their work. They are used to using oversimplified methods, such as deducting bonuses, rebuking people and giving compulsory orders. They do not value the right of workers as masters of the country and have thus seriously damaged the relations between the party and the masses of workers.

2. Some party members do not play an exemplary role and the fighting strength of the party organizations has been weakened.

Some party members, lacking a high sense of the party organization, have mixed themselves up with the ordinary people, or even with those who lack political consciousness. They often pick easy jobs and shirk hard ones while working, but strive to be the first and fear to lag behind in seeking personal gains. They do not keep their minds on the work assigned to them and are often the first to complain. Some party members do not care for the masses around them, saying that "it would be good if I could take good care of myself." They are, in fact, not ready to play the due role of party members. Thus, they have not only created a bad impression among the ordinary masses, but have also affected the activists. Some active workers who once applied for admission to the party said: "Seeing that some party members are behaving even worse than ordinary masses, our enthusiasm for joining the party has also been dampened." Some young workers said: "If people like him can be admitted into the party, I will not then join the party." From this we can see that when a party member does not play an exemplary role, he has not only failed to do his duty, but has also seriously damaged the party's prestige among the masses.

3. Very few party members are working in the forefront of production. This has directly affected the contacts between the party and the masses of workers and weakened the party's fighting strength.

Over the past few years, since large numbers of veteran party member workers have retired and very few young workers have been absorbed into the party, in addition, party members have constantly been transferred from the front line of production to administrative departments, there are very few party members on the front line of production now. This is an abnormal phenomenon. For example, in Shanghai's No 17 Cotton Mill, of the 8,371 productive workers, there are only 397 party members, which accounts for 4.7 percent of the productive workers. Of the 595 productive groups, 307 have not one party member, which makes up 51.6 percent of these groups. Zhengzhou's north railway station, which is under the Zhengzhou Railway Bureau, has 109 productive groups. But 44 of them have no party members, accounting for 40 percent of the productive groups. There are only 20 party member group leaders in these productive groups. In Beijing's No 3 Construction Company, there are 427 productive groups, but only 15 percent of them have set up party groups and 46.1 percent of the productive groups have no party members. There are very few party members, especially young party member workers, working in the forefront of production. In Nanjing Radio Factory, of the 10,023 productive workers who came to work in this factory after the smashing of the "gang of four," there are only 9 young party members, accounting for 0.87 percent of the young workers who came to the factory in the same period. Besides, four of them were admitted into the party during their service in the army. This shows that very few young workers who are working in the forefront of production have been admitted into the party in the past 6 years.

Since there are very few party members in the forefront of production, many problems have emerged and the direct contacts between the party and the industrial workers have been seriously affected. In the past, there were usually more than 3 party members in a productive group consisting of some 20 or 30 workers. A party group was set up to serve as the core of leadership in doing political and ideological work. Now since there are very few party members, the core of leadership cannot be shaped. Thus, the party has lost an important channel in doing ideological work, and the fighting strength of the party has been weakened.

Since there are very few party members in the forefront of production and they have continuously been transferred to the administrative departments, an abnormal phenomena has emerged: More and more party members have been gathered in the administrative departments while there are fewer and fewer party members on the front line of production. As a result, the more arduous the work posts, the fewer the party members are. This must be promptly changed, because this is not merely a question of the distribution of party members, but a question of great importance concerning the class nature and mass foundation of our party. Our party is a political party of the working class. If the party's strength is weak among the productive workers, who are the main characters in social economic life, the party's advanced role can hardly be displayed.

In light of the above-mentioned problems, we hold that at present, it is especially necessary to rectify the party's work style and organization while the enterprises are being consolidated, so that the party's work can be strengthened in the enterprises and that the phenomenon of being divorced from the masses, which exist, in varying degrees, among some cadres and party members, can be overcome and the ties between the party and the masses of workers be strengthened.

1. It is necessary to strengthen the education of party nature and mass viewpoint among the cadres and party members in the enterprises. Every cadre and party member must understand that our party is a political and vanguard party of the working class. Besides the interests of the working class and the broadest masses of people, it does not have any special interests. Our party is a party which serves the people heart and soul. In the process of leading the masses to realize their immediate and long-term interests, the party must always share the comforts and hardships of the people and maintain the closest of ties with them. No party members are allowed to break away from the masses and place themselves above them. It is necessary to let all party members understand that although our party has become a big party in power, with more than 39 million members, the number of party members among the masses is still very few. The party's tasks can only be fulfilled through the joint efforts of the broad masses of people.

Since many comrades do not possess the mass viewpoint, it is necessary to carry out an education of "winning over the masses" among the vast number of cadres and party members, especially among large numbers of comrades who were admitted into the party after liberation. Since its founding, our party has paid close attention to strengthening its ties with the masses of workers. "Winning over the masses" has always been a most important job for our party and every party member, which must be done most frequently and conscientiously. It is the foundation for our party's work in all other fields. Having close ties with the masses is one of the hallmarks distinguishing our party from all other political parties. It has always been an important policy of our party in the long-term revolutionary struggles and wars to make the greatest possible efforts to win over the masses, to win over the middle elements and to win over all people who can be won over from the antagonistic camps. History shows that this is a correct policy. It has ensured the victory of revolution from one aspect and is still necessary today, for it still has great vitality. At all times, we need to win over more masses and nonparty personages and make them rally around the party and under the party's leadership. However, since our party came to power, quite a few comrades have wrongly held that it is no longer necessary for us to win over the masses, for they have fundamentally changed their position and become masters of the country. Facts have proved this understanding to be wrong. Under the present conditions, we still need to win over and rely on the masses. If we do not win over the masses, or even break away from them and lose their support, we will accomplish nothing at all. At present, since some party members have been seriously divorced from the masses, it is all the more necessary to stress again the importance of winning over the masses. Being Communist Party members, we must never forget that we are servants of the people and must serve the people heart and soul. In a sense, to win over the masses is also serving the people. A Communist Party member can achieve successes in winning over the masses only when he displays the exemplary role of the vanguard. One can hardly, or can never, win over the masses if one does not overcome one's own shortcomings and mistakes. Winning over the masses and maintaining the party's close ties with the masses are sacred duties for all party members. If we firmly carry out these duties, we will never be defeated.

2. It is necessary to improve the political quality of the party members and give play to their exemplary role. The "Guiding Principles for Inner-Party Political Life" and other relevant documents of the party are important documents for carrying out education of how to be qualified party members among the broad masses of cadres and party members. It is necessary to make all party members and cadres understand that all Communist Party members have only the duty to diligently and conscientiously serve the people. They have no right to take advantage of their position and power to infringe upon the interests of the people and to seek privileges. At present, unhealthy tendencies widely exist among the cadres in arranging work and allotting houses for their children and relatives. The masses of workers have a strong aversion to this. In view of this, and in consideration of the continuation of employment and housing problems in the next 5 or 10 years, we suggest that during this movement to consolidate the enterprises and rectify the party, education and examination be carried out among the broad masses of party members, especially party member cadres, to solve these problems in light of the actual conditions in various units. In the future, no party member cadres, especially leading cadres, should be allowed to have a hand in arranging work for their children, which should be rationally arranged by the organization. On the allotment of new houses for workers and staff, the number of houses built, the regulations of allotting houses and the final decisions should be made known to the public. Leading cadres at various levels should not meddle in this matter. Coal mine cadres in various parts of the country have urged their children to return to the pits. This has been effective in encouraging the large numbers of miners to work enthusiastically in the pits. In the future, newspapers, broadcasting services and television must carry on active propaganda of such advanced deeds as well as of the cadres' children working contentedly on the posts of hard labor and advanced deeds of leading cadres in sharing the comforts and hardships of the masses.

It is necessary to carry out education among the broad masses of party members in the industrial and mining enterprises so that they can understand that the masses of workers recognize the party and decide what attitude they will take toward the party and toward labor chiefly through the actual practice of the party members who are working and living with them. In order to correct others' mistakes, one should first be correct oneself. Example is better than precept. We communists must first set good examples in order to influence and educate the masses, to do a good job in mass work and to lead the masses forward. We must set good examples in production, work and study as well as in abiding by discipline and law, in building socialist spiritual civilization and fostering good social atmosphere and in other fields. One can be regarded as a qualified Communist Party member only when one acts in this way, especially when one continues to act in this way in times of difficulty and danger. In order to overcome such phenomena as the low political consciousness and inactivity of some party members and the weakness and laxity of some party organizations, it is imperative to rectify the work style and organization of grassroots party organizations in the industrial and mining enterprises. During the rectification, those party members who continue to be unqualified after education should be cleared out of the party. Only when the rectification is carried out in such a strict way can the political quality of the ranks of party members be improved, the fighting strength of the grassroots party organizations be enhanced and the flesh-and-blood ties between the party and the masses of workers be really established.

Finally, it is necessary to absorb outstanding young workers into the party in an active and prudent manner. In order to solve the problem of there being very few party members in the forefront of production, resulting from the retirement of large numbers of veteran party member workers, much attention should be paid to the absorption of party members from among outstanding young workers. The future belongs to the youths. Our party is a communist political party facing the future. It always attaches importance to absorbing young party members. Now, young workers have become the main productive force. If we fail to timely absorb the advanced youths who have communist consciousness into the party and make them the key force of the party in uniting and educating the broad masses of youths, the party's work will not be able to take root among the youths and the party will not be able to lead the youths successfully forward. At present, the question of how to actively and prudently absorb large numbers of productive workers, especially young workers, who are up to the requirements for party members, into the party in light of the actual conditions of various specific units, must be placed on the agenda (of course, the work to absorb party members from engineers and technicians must continue to be grasped firmly). However, during the investigation, party organizations in many enterprises reported that many activists who have gone through various trials over the past several years, who have been active since the 3d Plenary Session of the 11th CPC Central Committee, who enjoy high prestige among the masses and who are up to the requirements for party members, have still not been admitted into the party due to the rigid restrictions on the number of new members. This has, to a certain extent, dampened the enthusiasm of the people, especially young people, who have asked to join the party. We hold that before the completion of the wideranging party rectification, the policy of appropriately absorbing new party members in accordance with the requirements for party members is correct. However, it is necessary to make stipulations of the number of new party members in light of the concrete conditions in various specific enterprises and units. In those units which have good party work style and discipline and which have done well in political, ideological and management work, the productive workers who are up to the requirements for party members must be promptly absorbed into the party.

What needs to be specially pointed out is that the party organizations and party members in many factories, mines and enterprises do not have a good understanding of the characteristics, history and present conditions of this generation of youths, including the broad masses of CYL members, and are not good at doing work among them. This must be changed. The CPC and CYL organizations at various levels and the vast numbers of party members must more frequently contact young people, be their intimate friends and really care for and help them in the political and ideological fields as well as in study and daily life, so as to discover and train the advanced youths who are qualified to be party members and actively absorb them into the party. Thus, our party will be injected with fresh blood. Our party is now in an important period of cooperation between old and new cadres and succession from the old to the new. We need to discover, train and promote a large number of young and middle-aged cadres. However, we must also notice that before they are promoted, they must usually be trained and absorbed into the party and become qualified party members. At present, due to the retirement of large numbers of outstanding veteran worker party members, the number of party members working in the forefront of production has been rapidly reduced in factories, mines and enterprises. Thus, to absorb young workers into the party to fill the vacancies has become more imperative. We must regard this work, which has an important bearing on the great cause of the working class throughout the ages, as a strategic task and make conscientious study and arrangements.

The situation of the party organizations is closely bound up with that of the working class. When a large quantity of fresh blood is injected into the body of our party, the party's ranks will surely thrive, the ties between the party and its own class will surely be more close and, at the same time, the ranks of the entire working class will also take on an entirely new look.

CSO: 4004/15

THEORETICAL WORKERS MUST TRAIN HARD IN BASIC SKILLS

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 30-31

[Article by Shi Youxin [2457 0645 2946]]

[Text] In order to create a new situation in our modernization program in an all-round way, we need a relevant contingent of Marxist theoretical study and propaganda work. Some party and state departments, colleges of liberal arts and social science research organizations have adopted effective measures to strengthen and enrich this contingent. To our delight, many young comrades have joined the rank of theoretical workers in the past few years and we would like to have a chat with them.

When the players of our women's volleyball team were competing for the world championship, hundreds of millions of people were watching the match on television and they were moved by the indomitable spirit of these players. When the masses thought deeply, they could not refrain from asking: What have the players depended on to win the championship on two occasions in the past few years? From our point of view, they have depended first of all on their correct ideology and second on their good basic skills. We cannot but be moved by their strenuous training in grasping basic skills under the guidance and planning of their coaches who trained them highly and strictly. We theoretical workers must also have such a dogged spirit in our training. The great poet of the Tang dynasty Bai Juyi said the following words when he was recalling his career: "Over the past 20 years, I have been busy in collecting taxes in daytime and in reading in the evening and in addition, I have also given courses on poems and consequently I have no time for sleeping and rest. Therefore my tongue and lips become sore and there is a callus on my elbow and although I am still young, my skin and teeth have degenerated." In order to keep his eyes lifelike and vivid, Mei Lanfang released a dove every day and his eyes followed the movement of the dove while Gai Jiaotian fought barehanded with an eagle every day and his eyes were almost pecked out by the bird of prey so as to enable his stage performance of fighting against eagles to be remarkably true to life. They were able to skillfully grasp artistic attainments thanks to their hard training. The young people who have just begun their career as theoretical workers must guard against a showy work style and having grandiose aims but puny abilities and they must in no way be satisfied with a smattering of a subject. Those with these shortcomings are in general transient figures although they have some talents; only a few of them are successful. Therefore the first task for young people beginning their careers is to work hard in grasping basic skills. This is a simple truth that has been derived from the experiences and lessons accumulated by many people over a long period.

What basic skills should theoretical workers have?

They must read books systematically and in a planned way. Reading is needed to do other work and this is particularly so in doing theoretical work. Without reading we can in no way carry out theoretical work. In order to accumulate experiences and understand the experience of our predecessors, it is necessary to read books conscientiously. As there are numerous books, it is also necessary to work out a plan to decide which are to be read first and which later. First it is imperative to read Marxist-Leninist books and those written by Mao Zedong. Marxism is a branch of science and all parts of this science have their own interrelationship and a process of their historical development. We will not be able to really grasp the Marxist scientific system unless we carry out study historically and in an overall way. In our study, we must in no way adopt a piecemeal approach or rely on others in a bid to save effort because in this way we will not be able to make big achievements. We must read extensively, including books about social sciences, natural sciences and some literary and art works. Marx was particularly interested in reading books by Shakespeare and Balzac. "Read extensively and you will be good at writing" refers to the relation between reading and writing. It is beneficial to read more books as long as the method is correct.

Of course, it is not enough just to rely on reading; we must also profoundly understand history and reality through investigations. The history of socialism in our country is not long and yet it has developed tortuously. The current policies of our party have been defined on the basis of summing up the past negative and positive experiences. If we fail to understand the past, we can in no way profoundly understand today, while to carry out meticulous investigations in a systematic way is the basic method for understanding history and current situations. If we do not understand reality and instead confine ourselves to books, it will be difficult for us to create even though we have read more books. "Investigations" must not be limited to just collecting second-hand materials while "study" does not mean merely ruminating achievements of others; in addition, we must follow the examples of writers to go deep among the masses so that there will be a profound change in our ideology and feelings and consequently we will be able to gain true knowledge and have specific views.

We must accumulate materials and be diligent in our writing. Reference materials are the foundation of theoretical workers and without such a foundation it will be impossible for them to make progress. We must try to gain materials by ourselves and not just rely on "ready meal." No matter how good materials are, they will not become ours without our efforts in digesting them. Theoretical workers must spare no effort in thinking and in writing. Diligence in writing will help to constantly improve theoretical thinking and the ability to express ourselves so that we will be able to constantly open up and consolidate our spheres of knowledge.

Therefore we must keep on studying unflaggingly and not sporadically. We must have the will to make progress and persist in placing strict demands on ourselves. We cannot resort to trickery, instead, we must study hard. It is not easy to read Marxist books in a systematic way while numerous, arduous and meticulous works are needed in carrying out study and investigations. Marx wrote the book "Situations of the British Working Class" after he carried out meticulous investigations in the filthy workers' district in Manchester. Si Maqian traversed mountains and rivers across a prefecture in ancient times to seek the cultural heritages and anecdotes of his predecessors and consequently he "was able to do desultory reading, run through classic works and his influence has been able to play an outstanding role in the literary world for thousands of years." It was really difficult to do so under such difficult traveling conditions at that time. Tolstoy said: "One can begin to write only when each time he dips in ink he leaves his blood in the bottle of ink." Those who are determined to become theoretical workers will not be able to grasp basic skills unless he has this spirit of fearing no sacrifice and the spirit to "fight" against difficulties.

To grasp basic skills is a slow process and therefore it must be carried out scrupulously and in an orderly way and step by step. Like learning the basic skills of writing, theoretical workers must also learn basic skills by starting from writing "regular characters" and then proceeding to "running hand" and "maturing as caligraphers" and consequently they become lively and vigorous flourishes in calligraphy and they are in a position to freely wield their writing brushes. In this aspect, slowness is for the sake of rapidness. If we are impatient for success before we have acquired the necessary foundation, we will only make waste. We must be content with quietness and daring to "hold a title without any obligation." Our motto should be: "No difficult things in the world and when there is a will there is a way; no easy things in the world and those who are persistent will get them."

We theoretical workers are serving the people and the cause of socialist construction and therefore we must get rid of the shackle of fame and gain and cherish lofty ideology. Marx constantly improved his theory because he considered it was a crime not to provide the best things to workers. We must also consider working hard in grasping basic skills as part of the practice of communism and do this work with concentrated effort.

Basically it depends on individual effort to grasp basic skills. But the high standard and strict requirements of the leadership and help from veteran comrades are also very important. Many facts proved that whether combat capability of a contingent of theoretical workers is strong or not and whether young theoretical workers can be brought up and to produce talents are inseparable from the leadership roles. It is a general truth of various trades that "strict masters bring about skillful apprentices." Strictness represents really good care of all comrades and particularly young ones. It is irresponsible to see our comrades taking a crooked path and yet we do not mend them. Therefore it is imperative to grasp well the work of training young comrades in basic skills. For these comrades, it is necessary to stress the importance of study, help them work out planning, pay attention to checking and testing their study and to commend and encourage their achievements and progress. It is also necessary to organize and encourage veteran comrades to help young comrades. In this way, we will be able to constantly train new backbones of theoretical workers and rapidly improve the nature and level of the contingent of theoretical workers.

HOW TO STUDY THE 'GENERAL PROGRAM' OF THE NEW PARTY CONSTITUTION

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 32-36

[Article by RED FLAG Theoretical Education Editorial Office]

[Text] The new party constitution passed by the 12th party congress has systematically summed up the historical experiences in the building of the party and reflected the demand of the party in our life. It is an important guarantee for making the party even stronger under the new historical period. The new constitution has a "general program" with relatively rich contents. In fact, this program is the basic program of our party and the criterion for measuring all party activities. Therefore, before studying the new constitution, it is necessary to study well the program.

The "general program" is written concisely and yet is rich in content. In studying this program, we can divide it into four main points.

First, the nature and guiding ideology of the party.

Second, the scientific socialist theory and the goals of the struggles of the party.

Third, the general tasks and basic policies of the party at the present stage.

Fourth, the three basic requirements in party building and the basic principle of the leading roles of the party.

In studying the "general program" we must first understand why it is necessary for the constitution to have a "general program" and also understand the significance of this program in terms of the unity of the party.

A proletarian political party must have a program that is based on the science of Marxism to openly declare its nature, goals of struggles and basic viewpoints and its own duties and principles of action. Engels said that the program of a party "is a flag that is openly hoisted and the outside world judges this party according to this flag." ("Selected Works of Marx and Engels," Vol 3, p 31) The "Communist Party Manifesto" is the program written by Marx and Engels for the "Communists Alliance." It has openly declared the flag of communism throughout the world. It declared that the capitalist system will eventually be eliminated and the communist system will eventually win throughout the world. The "Communist Party Manifesto" remains the basic theoretical foundation for us communists. To review the "Manifesto" in our study of the "general program" will help us understand even deeper the significance of this program and make us even more confident in our struggles for the realization of communism.

Ours is a proletarian political party that is built under the theoretical guidance of Marxism. Since its foundation, the party has had its own program that clearly defined its goals of struggles and its organizational principles. All the constitutions of the party since the seventh party congress has had a "general program." The "general program" of the new party constitution is formed on the basis of summing up in a systematic way the rich experiences of our party in the practice of socialism, including the serious lessons of the "Great Cultural Revolution." It has generalized the nature and guiding ideology of the party in a more complete and scientific way, the long-term and intermediate goals of the party, basic demands on party members and organizations by the party and the basic principles by which the party has correctly displayed its guiding roles. It is the basic program for the unity of the party under the new historical period and for the party to march along the socialist road and struggle for communism. Lenin said that the program of a party "is of great significance for uniting the members of this political party and for its consistent activities." ("Collected Works of Lenin," Vol 4, p 201) The purpose of a party constitution in demanding each of its members to acknowledge the program and regulations of this party is to guarantee the unity of the whole party and to make party members persist in accomplishing the historical tasks of this party. That is why it is imperative for each party member and all comrades that have applied to join the party to conscientiously study the "general program" so as to understand the basic principles of scientific socialism and the practical experiences of our party, improve the level of their ideology and understanding and raise their consciousness of struggling for the cause of the party throughout their life.

In studying the first point, it is necessary to correctly understand the nature and roles of the party and the vanguard roles of the working class. It is also necessary to profoundly understand the importance of guiding ideology in party activities while the whole party must conscientiously study Marxism-Leninism-Mao Zedong Thought.

The "general program" scientifically and completely expounded the nature of the party: "The CPC is the vanguard of the working class in China, the loyal representative of the interests of the people of various nationalities in the country and the leading core of the socialist cause."

Marxism holds that any political party has its own class nature. The Communist Party is the political party of the working class but it is only a part of this class and this is the advanced part. It is for this reason that the previous constitutions of our party explicitly pointed out: The CPC is the vanguard (or advanced army) of the Chinese working class.

Because of the social and historical conditions in which our party exists, the proportion of workers among our party members has always been low but this situation in no way affects the position of our party as the political party of the working class. It is because, generally speaking, the nature of the party is decided by the party guiding ideology, political line and organizational principles that are defined by the "general program" which have guaranteed that our party will maintain the advanced nature of the working class. Despite the fact that various forms of nonproletarian thinking will be eventually and constantly reflected within the party, this reflection is illegal and it has to be constantly overcome.

The advanced nature of our party is mainly manifested in the fact that the party has gathered together the conscious fine elements of the Chinese working class and of the masses of Chinese people. Our party has armed itself with a scientific world outlook. It is representing the whole interest of the working class and the whole nation and it has always played the roles of the leading core in various stages of the development of revolution. Now the key task of the party is carrying out the socialist modernization program. That is to say, the vanguard roles of the party today are mainly shown in leading the people in building socialism with high material and spiritual civilization and high democracy. Consequently, the "general program" has abolished the concept that the party "is the vigorous and vanguard organization that is leading the proletariat and the revolutionary masses in fighting against the class enemy" which was defined in the party constitution of the 11th party congress. This move is in line with the current political and economic situations of our country and with the demand of the general tasks of the party at the present stage.

In expounding the nature of the party, the "general program" also contained the sentence that is basically the same as the one used in the party constitution of the seventh congress. This sentence is that the CPC "is the loyal representative of the interests of the people of various nationalities in China." The only purpose of our party is to wholeheartedly serve the people and this purpose is the particular symbol of the political party of the proletariat. The activities of our party in the past 60 years and more never departed from this purpose. The leading position of our party as the ruling political party makes it easy for party members and particularly party cadres to divorce themselves from the masses. The abovementioned stipulation on the nature of the party in the "general program" is aimed at maintaining the party's political color of wholeheartedly serving the people and of preventing any trend of divorcing themselves from the masses and violating party rules and regulations in seeking personal interest and privileges.

The "general program" stipulated: "The CPC has taken Marxism-Leninism-Mao Zedong Thought as the guidance of its actions." This is the most basic condition for seeing that our party displays its vanguard roles of the proletariat. Lenin said: "It is only the party that has taken advanced theory as its guide that will be in a position to display the roles of advanced fighters." ("Selected Works of Lenin," Vol 1, p 242)

We have won great victories both in revolution and construction under the guidance of Marxism-Leninism-Mao Zedong Thought. In our Long March in the future, we will win still greater victories as long as we rely on the guidance of Marxism-Leninism-Mao Zedong Thought. It is true that some Marxist-Leninist conclusions are no longer applicable today, but the basic principles of Marxism-Leninism and its stand, viewpoints and methods still remain the most powerful spiritual weapon for us in undertaking and transforming the world. Mao Zedong Thought is the product of the combination of the universal truth of Marxism-Leninism with the reality of the Chinese revolution, and is the valuable spiritual wealth of the party. We can in no way deny the scientific value of Mao Zedong Thought and its guiding roles in the revolution and construction of our country just because Comrade Mao Zedong made mistakes in his advanced years.

Since Marxism-Leninism is the guiding ideology of our party, it is only natural that the party has put forth study tasks for its members. With regard to the obligation of party members, the party constitution stipulated: "Conscientiously study Marxism-Leninism-Mao Zedong Thought," and the basic tasks of party organizations at grassroots levels are to "organize party members in conscientiously studying Marxism-Leninism-Mao Zedong Thought" while, with regard to basic conditions for party cadres, the constitution stipulated that it is necessary to "have theoretical and policy level of Marxism-Leninism-Mao Zedong Thought." But some party members no longer bear in mind that it is their obligation to study the guiding ideology of the party and consequently they considered that it makes no difference whether they study or not. It is right to work hard to improve one's professional skills, in particular to acquire the specialized knowledge that is required in the modernization program. But communists must be armed with theory because it is not only needed in keeping correct political orientation but is also in the interest of doing a good job professionally.

In studying the second main point, it is necessary to understand: First, it is an objective law of social development to realize socialism and communism; second, the socialist system has the advantages that are beyond the reach of the capitalist system and it is not a "distant and indistinct illusion" to realize communism.

The "general program" stipulated: "The final goal of the party is to realize the social system of communism."

The "general program" expounded the theory and practice of scientific socialism in a big paragraph. Scientific socialism is part of Marxism-Leninism as well as the basic theoretical foundation for our party in defining its goals of struggles. This theory tells us that to realize socialism and communism is a natural trend in the development of world history. The capitalist society is the last social system with exploitation of men by men. The basic contradiction of a capitalist society is the contradiction between socialized mass production and private ownership of the means of production. This contradiction is beyond the reach of the capitalist system itself to resolve and it determines that capitalism will eventually be replaced by socialism. The proletariat is the most advanced and revolutionary class and it has shouldered the great historical task of burying capitalism and realizing socialism and communism. Our party has taken the realization of the communist social system as its final goal and its party members have sworn to struggle for the realization of communism throughout their life and all these are based on the above-mentioned scientific theory.

The scientific socialist theory formed by Marx and Engels has been tested and proven by the long period of practice in international communist movements and has been further developed in practice. Basing himself on the historical conditions for the era of imperialism, Lenin pointed out more than half a century ago: "Unbalanced economic and political development is an absolute law of capitalism. Therefore the conclusion is: It is possible for socialism to win victory in a few or even a single capitalist country." ("Selected Works of Lenin," Vol 2, p 709) This prediction of Lenin's was fully proven by the victory of the October Socialist Revolution in Russia. The victories of the Chinese revolution and construction have also been won under the guidance of scientific socialist theory which has in the process also been enriched and developed. The development of world history and particularly the establishment and development of the socialist system in some countries have served to prove that the victories won through the proletarian revolution, the replacement of the capitalist dictatorship by the dictatorship of the proletariat and the replacement of the capitalist system by the socialist system represent universal law of the development of society. Various countries have followed this law and taken various forms of revolutionary struggles and socialist construction with their own features.

The "general program" has concisely pointed out the superiority of the socialist system that is beyond the match of capitalist system. Having experienced the situation in which the economy and scientific technology of our country are relatively backward and the standard of living is comparatively low, some people consequently denied the superiority of the socialist system and lost confidence in the future of socialism and communism. This view is based on an objective factor of the damages caused during the 10 turbulent years that have made people passive ideologically, but what is more important is that it is because of ideological understanding. Our country was formerly semicolonialist and semifeudalist, coupled with a backward economy and culture. We began to carry out socialist construction on this basis not long ago and therefore it is impossible to develop the economy and scientific technology considerably in such a short period. It is not scientific simply to compare our country with the advanced capitalist countries that have hundreds of years of history behind them and to do so without making analyses. Furthermore, any development of capitalism is based on the exploitation of the people of the related countries and the plunder of their colonies and although advanced capitalist countries have very high national revenues, most of these revenues fall into the hands of a few capitalists. On the other hand, the greatest advantage of the socialist system is the abolishment of the exploitation system. Under such a social system, people have become true masters of their own countries and with the passing of the days, they have gradually formed a common ideal, morality and discipline; they have realized the public ownership of the means of production and the system of from each according to his ability and to each according to his work and consequently they are able to develop social productivity in a planned way, proportionately and in high speed, and meet the increasing needs of people's material and cultural life. Following the development of socialist construction and the perfection of various systems, this superiority will be displayed even more fully. It will be contradictory to reality if we fail to see all this, consider that socialist system has no superior and consequently lose confidence in the future of socialism.

Socialism is the preliminary stage of communism. As pointed out by the "general program," the change of socialism to communism must be realized through tremendous development of productivity and tremendous progress in ideology, politics and culture. Such a change is a long process that requires persistent and unremitting efforts for generations to come. But it is natural that socialism will develop into communism and therefore the final party goal of realizing communism is in no way a "distant and indistinct illusion." No matter when and where, we communists must be confident that communism will triumph and we must also believe that socialism and communism will eventually and gradually win victories throughout the world through the ways that are voluntarily taken by the people of various countries according to their specific conditions.

In studying the third main point, we must first correctly understand the important significance of social principal contradictions in defining the general tasks of the party from the point of historical experiences; second, we must correctly understand the relationship between economic construction and the building of spiritual civilization and the development of socialist democracy and understand the party's basic domestic policies and international policies.

The party's general tasks are defined under the premise of correct understanding of social principal contradictions. On the basis of summing up historical experiences, the "general program" clearly put forth the main contradictions of our society in the new historical period and it is on this foundation that the party's general tasks are defined. We have experienced a tortuous path in history and profound lessons in understanding social principal contradictions. Following great victories in socialist transformation, our party convened the eighth congress in 1956. This congress made correct analyses on the social class situation and economic and political situations of our country at that time. It explicitly pointed out that the principal contradiction at home was no longer the contradiction between the proletariat and the bourgeoisie but the contradiction between economic and cultural development and people's increasing needs. It also pointed out that the main task of the whole nation was no longer carrying out class struggle but to concentrate strength in developing social productivity, realizing the industrialization of the country and gradually meeting the increasing material and cultural needs of the people. But because our party did not have enough ideological preparation for overall socialist construction not all the comrades within the party profoundly accepted the congress' meaning about social principal contradictions and many other correct views and therefore they failed to persist and develop all these in practice. Following the 3d Plenary Session of the 11th CPC Central Committee, our party resolutely abolished the slogan of "having class struggle as the key," and with firm determination, it shifted key works to carrying out the socialist modernization program and economic construction. Such a move was a strategic policy that was based on past historical experiences and on scientifically reanalyzing the social principal contradiction in our country. This point was included in the "resolution" of the sixth party congress as well as the "general program." Such a measure is of profound significance in unifying the ideology of the party and in concentrating our efforts in carrying out the socialist modernization program.

On the basis of analyzing the social main contradictions in our country, our party has defined the general tasks of the present stage: Unite the people of various nationalities across the country, self-reliance and hardworking, gradually modernize industry, agriculture, national defense and scientific technology and build our country into a socialist country with a high degree of civilization and democracy. The main contents of the general tasks are closely related and they promote each other. Our key tasks are carrying out socialist modernization program and economic construction and they are the foundation for solving internal and international problems. The building of material civilization and socialist spiritual civilization condition and determine one another, and we cannot emphasize one aspect at the expense of another; in order to guarantee and promote the building of the two civilizations it is also imperative to spare no effort to develop socialist democracy, perfect the socialist legal system and consolidate and strengthen the people's democratic dictatorship.

According to the requirements of the general tasks, the "general program" has defined the basic party policies on the relations of nationality and the patriotic united front; it has also defined the basic stand of the party in international affairs, the relations of our country with other countries in the world and the basic principles of relations of our party with the communist parties in other countries and political parties of other working classes. In his report to the 12th party congress, Comrade Hu Yaobang expounded in an overall way the general tasks and various basic policies of the party and, therefore, in studying this main point of the "general program" we must also study the relevant part of his report.

In studying the fourth main point, we must understand: First, the contents and significance of the requirements of the three basic principles; and second, how to realize the leadership of the party.

The "general program" stipulated that in order to lead the people of various nationalities across the country in realizing the great goal of the socialist modernization program and strengthen the building of the party, it is imperative for the party to become highly unified in ideology and politics, to wholeheartedly serve the people and to persist in democracy, and we must uphold these three basic requirements. During our study, we must also grasp the main points of these requirements. The main points of the first basic requirement include: First, to guarantee the unified political basis of the whole party; and second, to guarantee the unified ideological line of the whole party. The second basic requirement includes: First, the basic interest of the party is none other than the interest of the working class and the broad masses of the people; second, the party shares weal and woe with the masses and keeps close contact with them; and third, persist in the mass line. The third basic requirement mainly includes: First, carry out high centralization and step up organization discipline on the basis of fully displaying democracy; second, launch criticism and self-criticism in a correct way, uphold truth and correct mistakes; third, implement the principle of equality in party discipline.

These three basic requirements are determined by the nature of the party as the vanguard of the working class. Our party is a united and unified combat collective and therefore it will be able to guarantee its unity in the struggle for its common goal with one heart and one mind only when it is able to keep highly unified in ideology and politics. The only purpose of our party is to wholeheartedly serve the people and the basic way for realizing this purpose is to keep close contact with the masses and persist in the mass line. Democratic centralism is the organizational principle of the party and is an important guarantee for displaying the initiative and militancy of the whole party fail to persist in high unification in ideology and politics and factional activities and strife are allowed, should the party fail in wholeheartedly serving the people and turn to seeking the private interest of individuals or small cliques and should it fail to persist in democratic centralism and turn to allow arbitrary decisionmaking by individuals, it will naturally fail to maintain the color of a political party of the working class and eventually it will become degenerate.

The three basic requirements have concentratedly manifested the fine tradition of our party and were also included in the party constitutions of the seventh and eighth party congresses. The "general program" of the new party constitution has inherited and developed the advantages of the "general programs" of the constitutions of the seventh and eighth congresses with more explicit definitions and therefore this "general program" will play an active role in party building.

These three basic requirements are also based on the summing up of experiences and lessons of the "Great Cultural Revolution." In their effort to undermine our party, Lin Biao and the "gang of four" first undermined the unity and democratic centralism of the party in their bid to change the party into their tools for the seizure of party and political power. The serious effects of these activities have constituted a reason for the unhealthy work style in our party. Seen from negative and positive historical experiences, it is imperative to strengthen the building of the party by strictly following the three basic requirements so as to turn our party into a powerful core in leading the socialist modernization program. It is necessary in our study to find our shortcomings by comparing them with the three basic requirements so that we will become the communists that are up to standard and will strive to basically change the style of our party for the better.

The "general program" finally expounded how to realize the leadership of the party and defined the basic principles for party leadership. It stipulated: "Party leadership mainly refers to political, ideological and organizational leadership." There are three main points for realizing party leadership: First, defining and implementing correct line, principles and policies; second, doing a good job of party organizational work and propaganda and education work and third, display the vanguard and exemplary roles of all party members in all works and social activities. These definitions have pointed out the orientation for doing a good job of the party and strengthening and improving party leadership.

Our party has played leading roles in state works and various aspects of social activities and therefore party organizations at various levels have complicated and arduous works. Because of a long period of historical reasons, the party leading system has yet to be perfected. It is often that "leadership of party committees and party secretaries in command" are emphasized in any work and consequently party organizations have found themselves involved in administrative works, and have even replaced administration and take care of everything. As time passed, this practice consequently became regarded as normal and many comrades have considered this practice as strengthening party leadership. In fact, such practice has resulted in a situation in which the party does not care for its work, the building of the party has been spoiled and party leadership has been weakened. The above-mentioned definition about party leadership in the "general program" is aimed at overcoming the shortcomings of mixing party works with administration and of the party monopolizing everything so that to strengthen the party's political, ideological and organizational leadership, strengthen party building and at the same time guarantee that government departments and enterprises will be able to carry out their works independently and effectively.

The "general program" also stipulated that the "party must carry out its activities within the spheres of the state constitution and legal system" and that it must strengthen leadership over various mass organizations so as to fully display their roles and strengthen its close cooperation with the masses outside the party. All these have been put forth on the basis of summing up the past experiences and are very important in helping the party correctly display its roles.

WHY IS THE POLICY OF 'UNIFYING WITH, EDUCATING AND REFORMING' INTELLECTUALS NO LONGER IMPLEMENTED?

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 37-38

["Answering Questions" article by Cheng Hong [2052 3163]]

[Text] Workers, peasants and intellectuals are the three basic social forces in our country. In carrying out our policy toward intellectuals, we must regard them in the same light as workers and peasants, as forces to be relied upon in the construction of socialism, and give full play to their role. Since the 3d Plenary Session of the 11th CPC Central Committee, there has been no further mention in Central Committee documents or in the speeches of central leaders, of "uniting with, educating and reforming" the intellectuals. This constitutes an important readjustment in the party's policy toward intellectuals.

The kind of policy the party adopts toward intellectuals is decided by the party's tasks and the state of the intellectual contingent during different historical periods. In the early years of the PRC, with regard to the intellectuals left over from the old society, the party continued to conduct the policy of "unity, education and reform" laid down during the revolutionary war years. This was because at that time, since the party's historical task was to thoroughly complete the democratic revolution and carry out socialist transformation, it could rely only on the workers and on the poor and lower-middle peasants, while intellectuals formed a reliable allied army to be united with. At the same time, there was the problem of adapting the intellectuals politically and ideologically to the needs of the new society and transforming their world outlook so that they would turn from serving the old society to serving the new one. Therefore the implementation of this policy was appropriate at the time. By 1956, the socialist transformation had achieved decisive victory, and the CPC Central Committee convened a meeting on the issue of intellectuals, so that the policy on intellectuals would be readjusted in good time. They pointed out that the vast majority of intellectuals now constituted a part of the working class, and decided on the correct principles and policies. But due to the development of "leftist" guiding ideology which followed, this policy readjustment was not upheld. Our country has now entered a new period of historical development; the exploiting classes have been eliminated, and the party's general task now consists of carrying out the gradual modernization of industry, agriculture, national defense and science and technology, building our country into a highly civilized, highly democratic socialist state. Under these new historical conditions, it is even more necessary to rely on the intellectuals. At the same time, the ranks of intellectuals themselves have undergone great changes. The vast majority of the present intellectual ranks consist of those brought up after the founding of the PRC. They have received the education of the party and the socialist state, they are engaged in socialist labor, and the great majority of them were born into the families of the laboring masses. The proportion of intellectuals left over from the old society is very small, and these people have worked earnestly for socialism for over 30 years; they have undergone the same experiences and hardship as the party and the people, and have made great political and ideological progress. Therefore, relying as much on intellectuals as on workers and peasants to build socialism is the inevitable result of the development of history. The attitude that the more knowledge someone has the less reliable or even the more reactionary he is, is an ultraleft fallacy created by Lin Biao, Jiang Qing and their ilk. We should no longer be influenced by it.

"An intellectuals' work is light and comfortable and cannot be compared with that of workers and peasants who work so hard and sweat so much." "Workers and peasants are the creators of a society's wealth, while intellectuals are supported by them; they cannot be on an equal footing." That certain comrades think like this is due mainly to their lack of understanding of the characteristics and function of mental labor. Mental labor is an arduous kind of creative labor. Such phrases as "racking one's brains," and "shedding one's heart's blood" could be said to be appropriate metaphors to describe mental labor. How can it be denied that mental labor is an equally arduous and hard form of labor? As to the role of mental labor in the progress of society, the 12th party congress has clearly indicated that science and technology are the key to the implementation of the four modernizations and education its basis. For instance, the advance of science and technology brings about a massive growth in industrial and agricultural production; and the improvement of economic management results in marked increase in economic benefits. There are thousands of other such examples. The results which intellectuals' mental labor creates are not only able to form or be turned into material wealth, but the role they play in the increasing of that material wealth is often incomparable to simple physical labor. If we break down the narrow-mindedness of the small producer, we will come to realize that intellectuals, who engage in mental labor along with workers and peasants who do physical labor, are all laborers indispensable to the construction of socialism, and should all be forces our party can rely upon.

"Does this really mean that intellectuals no longer have to reform?" This is another piece of reasoning used by those comrades who are unwilling to abandon the slogan "unity, education, reform." The 12th party congress report stated clearly that we must "improve their ideological and political education in accordance with their special characteristics." So we can see that the party has by no means said that we need not educate or reform intellectuals. At present, the lingering poison of the exploiting classes has not yet been and cannot possibly be eliminated, and foreign capitalism might still influence and corrupt us; so the transformation of world outlook, in its general sense, is the duty of every member of society, and of course of all intellectuals. Since intellectuals bear an important responsibility toward the building of socialist spiritual civilization, they must pay even greater attention to their own ideological building; they must earnestly study Marxism-Leninism-Mao Zedong Thought, identify with the workers and peasants, and become both Red and expert. However, this is a completely different thing from carrying out reform on intellectuals as if they were capitalist intellectuals, as in the past.

Comrade Mao Zedong said: "Without the participation of the intellectuals, the victory of the revolution will be impossible." In the same way, without the participation of the intellectuals, the victory of the construction of socialist modernization will be impossible. To bring peace of mind to the intellectuals and brace their spirits, so that they may contribute all their wit and wisdom, we must rely on the correct and thorough implementation of the party's policy. Because in the past "leftist" mistakes arose in our guiding ideology, intellectuals were labeled capitalist intellectuals, "unity, education and reform" continued to be stressed, and eventually, with the 10 years of disorder, came the serious consequences of the exclusion, attack and persecution of intellectuals, and the devastation of education, science and culture. This lesson of history must not be forgotten. Over the past few years, as the CPC Central Committee has worked persistently at bringing order out of chaos, it has readjusted the policy toward intellectuals, bringing it back onto the right path. The pressing task now is for the whole party to firmly grasp the work of implementing this policy, and create a new situation in work concerning intellectuals. The breaking of the bonds of "leftist" thinking and the small-producer mentality, the elimination of the erroneous influence of discrimination against intellectuals, and the abandonment of the outdated policy of "unity, education, reform" should be seen as the key to this.

IS THERE CLASS CHARACTER IN SPIRITUAL CIVILIZATION?

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 38-39

[Article by Zhang Qihua [1723 0796 5478]]

[Text] Is there class character in spiritual civilization? A simple answer of "yes" or "no" to this question is not appropriate. Only through concrete analysis, can we understand correctly.

The spiritual civilization which we are talking about is socialist spiritual civilization, which, as indicated by itself, is different from capitalist and feudal ones. It is, therefore, not appropriate to talk about spiritual civilization without discrimination. The 12th CPC Congress report clearly pointed out that socialist spiritual civilization constitutes an important characteristic of the socialist system and takes communist ideology as its core. Cultural construction must also be carried out under the guidance of communist ideology and ideological construction determines the socialist character of our spiritual civilization. All this clearly shows that socialist spiritual civilization is absolutely different from all spiritual civilization under the exploiting system with regard to general nature.

However, it cannot be said indiscriminately that there is class character in the content of every item of spiritual civilization. Because spiritual civilization consists of many items, which vary in their specific content. There is class character in some content or some fields of the content but there is no class character in others. Therefore, we must make a concrete analysis of the content of spiritual civilization.

As far as cultural construction is concerned, there is class character in such basic problems as guiding thought and on whose behalf, whether for developing education, science, literature and art, journalism, broadcasting and other cultural causes or upgrading the cultural level of the masses and carrying out cultural activities. Socialist cultural construction must serve socialism, take communist ideology as its guide and march along the direction of communism. For example, the development of educational cause in socialist countries and that in capitalist countries are essentially different whether in educational policies or in direction of development. Such a difference is the difference of class character. It is all the same in literature and art. As social ideology, literature and art is the product of the reflection of certain social life in the minds of people. In a class society, writers and artists understand, reflect and evaluate life from the viewpoint of a particular class. Therefore, the ideological content of literature and art cannot but bear the hallmark of a particular class. However, this does not mean that there is class character in every field of it. For example, as regards many specific contents of education, the general knowledge of mathematics, physics, chemistry, languages and logic are the achievements made by mankind in understanding of the world over several thousand years, which should be mastered by people under various different social systems. There is of course no class character to this part of the contents of culture and education. In addition to their general social character, literature and art have their own specific laws. Excellent literary and art works of each age can all pointedly reflect some contradictions of the social life at the time by using vivid and typical images and significantly express some progressive ideas and feelings with skillful techniques and in perfect forms. Such literary and art works can make people of later ages realize the life at the time, understand the progressive ideological content and use the techniques and forms for reference. Such an excellent literary and art heritage also bears the hallmark of a class, but is liked by the broad masses and is the common cultural treasure of mankind. Undoubtedly, to critically inherit this literary and art heritage is indispensable to the development of the socialist cultural cause. As for natural science, it reflects the law of development in nature and has no class character; it can, therefore, be discovered, mastered and utilized by people of different classes. Of course, the purpose of utilization and service of natural science is determined by the class which masters it. This is yet another problem.

On the whole, the contents involved in ideological construction possess conspicuous class character. An ideal is meant for people's expectation and pursuance of the future and has conspicuous social and class character. Different classes in different societies have different ideals. The same may apply to moral integrity. In a class society, all classes extend to their own moral concepts from their specific class status and interest. The basic principle of capitalist morality is bourgeois individualism: but the basic principle of communist morality is proletarian collectivism. Disciplines are also different in different societies. Proletarian discipline is a conscious one and reflects the serious organizational character of the proletariat. This is essentially different from the compulsory discipline established on the basis of the exploiting system. Therefore, there is, on the whole, class character in the content of ideological construction. However, this does not mean that there is class character in all contents of it, because it involves some codes of morality and conduct which all societies must possess in order to maintain normal life. For example, there is no difference between the proletariat and bourgeoisie when it comes to the issues of paying attention to decorum, observing traffic rules and maintaining public order.

WHY DO WE SAY THAT THE 'GUIDING PRINCIPLES' ARE AN IMPORTANT SUPPLEMENT TO THE PARTY CONSTITUTION?

Beijing RED FLAG in Chinese No 23, 1 Dec 82 p 39

[Article by Yong Keyang [7167 0668 7122]]

[Text] The "Certain Guiding Principles on Inner-Party Political Life," passed by the 5th Plenary Session of the 11th CPC Central Committee, are the party's rules and regulations laid down on the basis of summing up our party's positive and negative experiences regarding its handling of relations within the party, relying on the party building theory of Marxism-Leninism-Mao Zedong Thought. The party constitution is the party's basic law; of course, this constitution contains stipulations on certain important questions of principle concerning inner-party political life, nevertheless, it is impossible to state all the specific parts of each principle one by one, so the "Guiding Principles" therefore constitute an important supplement to the party constitution.

The "Guiding Principles" provide a theoretical and practical solution to all the important problems concerning inner-party political life in accordance with the new tasks and situation facing our party. Regarding the party's fine traditions and style, all the divisions between right and wrong in inner-party political life and especially the morals and style essential to a member of a ruling party, the "Guiding Principles" have raised these to the status of party rules and regulations and fixed them there. Moreover, they have systematized and standardized the many successes our party has experienced in solving problems within the party and provided all levels of the party organization and every party member with a clear-cut norm for behavior. Now that we have both the new party constitution and the "Guiding Principles," party organizations at all levels and all party members are even more clear about what they should support and oppose and under various conditions, what they should do, what they are not permitted to do and how they should act. If we earnestly carry out the new party constitution and the "Guiding Principles," we will be able to handle correctly the relations between democracy and centralism, freedom and discipline, and unity and struggle within our party; the relations between the organization and the individual, the upper and lower levels, the leadership and the masses, between the members of party committees and between party members; and all the contradictions within the party. In this way, we will turn the party into a strong militant collective united as one. The "Guiding Principles" crystallize the whole party's experience and wisdom and as a series of important principles to abide by when dealing with inner-party relations, they constitute an important supplement to the party constitution.

Certain specific rules contained in the "Guiding Principles," from the point of view of the corresponding parts of the new party constitution, are also important supplements. The general program of the new party constitution states: In order to lead the whole country and the people of all nationalities to realize the magnificent goal of socialist modernization, the CPC must strengthen party building, foster the party's fine tradition, and enhance its fighting strength; to this end it must fulfill three basic demands, the first of which is "a high degree of ideological and political unity." The first article of the "Guiding Principles" clearly states that "the upholding of the party's political and ideological line is the most fundamental of the guiding principles for inner-party political life." It also states that all party comrades must determinedly and thoroughly implement the party's Marxist-Leninist political line. Furthermore, the "Guiding Principles" also states that "all CPC organizations, departments and members must consciously and resolutely carry out the party's political and ideological line. The duplicitous attitude of open, passive or covert resistance to the party line or its leadership will not be tolerated by party discipline." Some other important stipulations contained in the new party constitution, concerning such things as the system of democratic centralism, party discipline and demands on party members and cadres, are also given more concrete explanations and provisions in the "Guiding Principles." That the "Guiding Principles" have provided specific stipulations on important principles concerning party building means that our party's rules and regulations are even more complete, substantial, and helpful to the struggle against unhealthy tendencies within the party and to the enhancement of the party's fighting strength.

The "Guiding Principles" constitute an important set of laws and regulations and a powerful weapon for correcting party style. They were drawn up mainly in response to the irregularity of inner-party political life, the incorrectness of party style, the damage caused to the party's prestige, and other conditions brought about by the "Cultural Revolution." Moreover, their formulation represents an important measure adopted by the central authorities to rectify the party. Through the hard work of the whole party, it has undergone a marked turn for the better over the last few years and where the "Guiding Principles" have been implemented relatively well, political life within the party has gradually returned to normal. The "Guiding Principles" now form a mirror by which to examine party style and discipline, a criterion for assessing truth and falsehood and a weapon to use in the struggle against unhealthy tendencies. At present our party's style has not as yet undergone a fundamental turn for the better and the problems of impure ideology, work style and organizations still exist; all of this causes serious harm to the party's prestige. Our experience of fighting all kinds of unhealthy tendencies in the party tells us that wherever the "Guiding Principles" are implemented thoroughly and earnestly, unhealthy tendencies lose their market and the party organizations enjoy high prestige among the masses; in areas where this is not the case, unhealthy tendencies are rampant, the party organizations lose the faith of the masses and all work is difficult to launch. Therefore, from the aspect of rectifying unhealthy tendencies within the party, the "Guiding Principles" again constitute an important supplement to the party constitution. From now on, the "Guiding Principles" will certainly continue to play a positive and effective role in the rectification of party organizations and party work, and the strengthening and improvement of its leadership.

HOW SHOULD WE UNDERSTAND THE RISE OF THE THIRD WORLD BEING A MATTER OF PRIME IMPORTANCE OF OUR TIMES?

Beijing RED FLAG in Chinese No 23, 1 Dec 82 p 40

[Article by Li Shuqiao [2621 2885 2890]]

[Text] Since the end of World War II in the vast areas of Asia, Africa and Latin America, nearly 100 former colonial and semicolonial countries one by one have broken from the colonialist fetters of the imperialists and gained political independence. Together with countries that already had won their independence before and a number of other developing countries, these countries have formed a Third World. In the past these countries served as the "rear area" for the imperialists, but now they have become the principal force in fighting against imperialism, hegemonism and colonialism and are playing an increasingly great role in international affairs. This has greatly changed the features of the whole world.

The rise of the Third World has changed the balance of political forces in the world and ended world domination by imperialists and superpowers.

Ever since the emergence of colonialism and imperialism in the world, the resistance struggle of oppressed nations and people have never ceased. However, for quite a long time in the past, this resistance was carried out in an isolated and dispersed way. After World War I and the Russian October Revolution there was a new upsurge in the struggle of colonial and dependent countries' people for national independence. The victory of the antifascist force during World War II speeded up the revolutionization process in the world.

Through prolonged revolutionary struggle China, a country with about a quarter of the world's population, broke away from the world capitalist system and began to embark on a socialist route. This tremendously encouraged the liberation struggle of oppressed people and nations. A large number of Asian, African and Latin American countries won their independence during the high tide of the national liberation movement and the old colonialist system of the imperialists collapsed. This dealt a heavy blow to the rule of imperialism over the world and weakened its strength.

After gaining independence, Third World countries can exercise their state power and strengthen their unity and cooperation in fighting against imperialism, hegemonism and colonialism and, thus command more power to wage their struggles. Since World War II the imperialists have launched many localized aggressive wars, but they have suffered heavy losses in these wars in the face of joint resistance by the countries attacked and other Third World countries. This shows that the Third World countries already have become the main force in countering aggressive wars and safeguarding world peace.

For a long time the United Nations was manipulated by the major powers and did not reflect the interests of many medium and small countries. This began to change after large numbers of Third World countries became members. China's legitimate seat in the United Nations was restored in 1971 by an overwhelming majority vote. In 1974 the 6th special session was called by the General Assembly to discuss the problem of imperialist exploitation and plunder and ways to reform international economic relations. At the end of 1981 a man from the Third World was chosen secretary general of the United Nations. Imperialism, hegemony and expansionism have been condemned repeatedly in many UN meetings. All this shows that the role played by Third World countries in international affairs is increasing steadily. Since its birth, the Nonaligned Movement that has been joined by most Third World countries already has become an important force in world political life. These countries adhere to the principle of opposing imperialism, colonialism and hegemonism and of opposing imperialists--especially the superpowers--for the power politics of using their great strength to bully the weak, wantonly interfere in other countries' internal affairs and encroach on the interest of people of other countries. They adhere to the basic principles of independence and nonalliance and have played a positive role in international struggle. Many facts prove that since the achievement of independence by a series of former colonial and semicolonial countries and the rise of the Third World the era when imperialism, especially the superpowers, could dominate the world is gone forever.

Economically, the rise of the Third World has weakened imperialist control over world economy to a certain extent.

Since Third World countries gained political independence their national liberation struggle has developed further and delved deeply into the economic spheres. In order to fight against the exploitation, plunder and control of imperialists and the superpowers, break away from the fetters of old unequal and unreasonable international economic relations, develop their national economy and consolidate their political independence with economic independence, large numbers of Third World countries have taken an active part in the struggle to build a new international economic system. Latin American countries took the lead in opposing the superpowers' maritime hegemony and already have won the support of most countries in the world.

Facing long-term control and plunder of their primary resources by the imperialist powers, the Third World's oil-exporting and raw material producing countries have fought to exercise their rights over their own natural resources and the right to exercise their internal sovereignty. As a result they have safeguarded their national rights and interests and weakened the imperialists' world monopoly over raw materials. The daily increasing surplus funds of oil-exporting countries already have become a financial power in the world. This has weakened the imperialists' control of the international financial market. Some manufactured goods of Third World countries are breaking through layers of barricades and penetrating into international markets and presenting a challenge to the developed countries' prolonged monopoly over the world manufactured goods market.

From the above we can see that the rise of the Third World in the world arena is of great and far-reaching significance in both international politics and economy. We must recognize fully and evaluate this major event of international importance and stand firmly on the Third World's side in opposing imperialism, hegemonism and colonialism and in protecting world peace and promoting human progress.

JEAN-PAUL SARTRE AND EXISTENTIALISM

Beijing RED FLAG in Chinese No 23, 1 Dec 82 pp 41-48

[Article by Liu Fongtong [0491 2397 2717]]

[Text] Jean-Paul Sartre (1905-1980), French existentialist philosopher, writer and social activist, was one of the most noted personages among contemporary Western thinkers. The influence of his thinking exceeded the confines of the French nation and spread to the entire Western world. Our country has also been affected to a certain extent. What kind of a man was this Sartre? And what kind of philosophy is his existentialism? How should we treat Sartre and his existentialism? This article proposes to offer some crude views on these problems.

I

Sartre was born of a family of the intelligentsia. In his middle school days, he intended to study literature but also began to show an interest in philosophy. The writings of contemporary Western noted philosophers in humanism, a school of antirationalism, such as Schopenhauer, Nietzsche, and Bergson, were the first to attract him into the realm of philosophy and had lasting effects on him. In 1924, Sartre entered the famous Ecole Normale Superieure of Paris and formally took up the study of philosophy. In 1929, he received the academic title of middle school teacher of philosophy. In 1933-1934 he took up further studies in philosophy in Berlin's Francis Academy where he did research work under Edmund Husserl, founder of phenomenology, a school of contemporary Western philosophy. He studied the writings of Soren Kierkegard, the vanguard of existentialism, and also the writings of the founders of existentialism in Germany, Martin Heidegger and Karl Jaspers. It was at that time that he was formally initiated into existentialism. In the book "Surmounting Oneself--A Basic Thought in Husserl's Phenomenology--Intentionism" which he wrote at that time he expostulated his basic thought on his existentialism. After the outbreak of World War II, he was conscripted into the armed forces. In 1940, he was captured by the German forces and was put in a concentration camp. In 1941, he was released and continued his teaching profession. For a time, he and his associates formed an antifascist organization, known as "Socialism and Freedom." In 1943, he published his book "Being and Nothingness." This book may be said to have laid the foundation for him to become the most prestigious representative of existentialism. Beginning in 1944, he resigned from the teaching profession and devoted his time solely to writing books. In 1946, he published the book "Existentialism Is a School of Humanitarianism." In 1960, he published his long treatise, "Critique of Dialectical Reason (Vol 1)." In addition, he turned out many influential literary articles such as the drama scripts "Flies" and "Intermission" and the fictions, "Wicked Heart," "Roads to Freedom," and so on. In these publications, he expressed in literary form the gloomy and difficult ideological contents of his philosophical writings. In this way, he linked together existential philosophy and literature and further expanded his ideological influence. Sartre's ideological viewpoints differed from each other at different periods. In his book "Critique of Dialectical Reason," he went so far as to advocate the "acceptance" of Marxism. He wanted to "replenish" and "renovate" Marxism with existentialism. In reality, he attempted to existentialize Marxism. In 1975, he published "Self Portrait at Seventy" which appeared in the form of a dialogue with a correspondent. In this book he reviewed and summed up his life experiences and his philosophical and literary thought, in which he made the admission that he was still a firm supporter of existentialism.

Among the contemporary thinkers, Sartre was a comparatively progressive element in the field of politics. He made some revelations concerning the capitalist system and leveled certain criticisms at it. He believed that "this society was immoral, and that it was set up not for the sake of mankind but for the sake of profits." He demanded that this irrational system be reformed. During World War II, he took part in the antifascist struggles and made use of his writings to encourage people also to take part. In the 1950's-1960's, he strongly protested against the invasion of Korea and Indochina by the United States and also the French war on Algeria. He vigorously condemned hegemonism. He expressed his sympathy and support for the Chinese people's revolutionary cause. Throughout his life, he did much work for world peace and mankind's progressive enterprises. He was unlike other Western thinkers who were only after fame and money. He was relatively straightforward. Nevertheless, Sartre was not a thinker of the proletariat, but an anarchist. After the May riots in France in 1968, he said to people: "If people will only read my whole writings, they will understand that deep in myself I have not changed and that from beginning to end I am an anarchist." ("Self Portrait at Seventy")

Sartre's existentialism reflects on one side the spiritual condition of the vast petty bourgeoisie and the intelligentsia in contemporary Western society. In the years of his activities, Western capitalist society was full of contradictions with dangers lurking everywhere. The two world wars which broke out in succession in the first half of the 20th century caused unprecedented havoc to the material civilization and spiritual civilization of many countries in Europe. They brought innumerable disasters to the vast masses of people (not only the proletariat but also the vast petty bourgeoisie and the intelligentsia and even a portion of the capitalist middle class) and seriously threatened their liberty, democracy and even their right of existence. This state of affairs was especially marked in France. During World War II, France was under the domination of German fascism. All that had been taken as sacred tokens such as "freedom, equality and universal love" and all the traditional views on morality became the objects of French mockery. After the war, as in other Western countries, social production in France gradually recovered and developed, great progress was made in science and technology, and the standard of living of the people was also improved. Nevertheless, the various kinds of inherent contradictions and dangers of capitalism were not removed. Besides the proletariat, the vast masses of the petty bourgeoisie and the intelligentsia themselves were hard pressed both materially and spiritually. They had the feeling that the world they lived in was a hostile, gloomy, turbulent and crazy world. They felt that they had nothing to depend upon and that other people and society seemed to be against them. Consequently, they felt depressed, lonely and even hopeless. They felt dissatisfied with reality, sought to resist, and hoped to regain man's freedom and dignity, but they were unable to find a way out. This type of ideology and feelings of the petty bourgeoisie and the intelligentsia in contemporary Western societies formed the basic contents of what Sartre discussed and described in his philosophical writings and literary creations. They were also the basic facts of society which he mentioned in his writings. Precisely because of this, Sartre's ideology elicited from among these circles a strong feeling of sympathetic response.

II

Like other existentialists, Sartre attempted in man's name to oppose all kinds of philosophy which were in search of the world's basis and nature. In his view, these philosophies (be they materialist or idealist) had a common defect in that even before they had acquired a clear understanding of man's existence and nature they proceeded to probe into the world's existence and nature. Materialism chose the outside material world as the starting point whereas idealism used the spiritual nature of certain abstraction as the starting point. In their interpretation, man became some kind of an accessory or appendage; man's special features were ignored, his status was downgraded, and his existence was forgotten. In Sartre's opinion, this kind of philosophy should be abandoned and replaced by a new philosophy, that is to say, existentialism. He announced that existentialism recalled the forgotten man and considered that man's existence should be regarded as the most basic existence and man should be interpreted with man's own existence as the starting point, thus to reveal to the whole world. As he saw it, the problem of man constituted the basic problem of philosophy and philosophy was the "study of man." Sartre said: "Existentialism is a doctrine which aims at making mankind's living a possibility." He was of the opinion that "each truth and each action must embrace therein mankind's background and mankind's subjectiveness." Existentialism "is the only kind of theory which provides man with dignity." ("Existentialism Is a School of Humanitarianism")

Since Sartre considered the problem of man as the basic problem of the philosophy of existentialism, it may be asked how he understood or interpreted man. He and the other existentialists summed up the real existence of man as the existence of the solitary man. He believed that each and every person had a unique and special feature that was different from others. This special feature formed man's individuality and nature and formed man's real existence. The real existence of this category of people could only be exhibited when the individual person was separated from other people and from society, that is to say, when he was a solitary being. Naturally, Sartre did not refute man's existence in society. Rather, he admitted that each individual must live in a definite "environment" and must enter into various kinds of relationships with other persons and society. But he believed that when people entered into relationship with other people and society their existence was objective and they were at the mercy of other people and society. They would lose their independent character, unable to keep the initiative in their own hands. In this way, man would be degraded to the lowly status of mere articles or things. This was not man's real existence. To study man with this type of existence as the starting point would not be able to reveal man's individuality and nature. And Sartre took the existence of this type of absolutely solitary individual as precisely the starting point for his entire structure of philosophy. In reality, man at any time cannot be segregated from society and exist solitarily. Man's individuality and nature are closely related to man's social associations of various sorts and are formed in certain definite social associations. Marx pointed out that man's nature is the "sum total of all social relations." ("Selected Works of Marx and Engels," Vol 1, p 18) Only through studying man's social relations can we really understand man's individuality and nature and understand man's true and real existence. In taking the existence of the solitary individual as the starting point of his "study of man," Sartre, from the very beginning, isolated himself from reality and from truth.

Just what kind of existence is this existence of the solitary individual which Sartre took as the starting point in his "study of man"? To put it in simple terms, this kind of existence is the individual's consciousness, that is to say, the individual's pure and absolute subjectivity. Sartre did not refute man's material existence, but he believed that this type of existence was not man's real existence and also not the basis of man's consciousness. Hence, he thought it could not be taken as the starting point for philosophy nor could it be included inside the scope of studies in philosophy. The individual's existence which philosophy should study and take as the starting point was only the individual's consciousness and subjectivity.

Not only that! Consciousness which Sartre took as the real existence of the individual not only is not the cognition of what materialism calls as material things and their reflection but also not what idealism calls as spiritual substance of derivative materials. In his conception, what materialism and idealism term as consciousness belonged to the realm of the theory of knowledge and had as their logical premise the distinction between the subject and object of knowledge, and may be called dualism. But the consciousness which he took as the starting point of philosophy was prior to the knowledge activities, had no logical premise, and did not include the distinction between subject and object, that is to say, this type of consciousness itself had no content of existence, being only pure conscious activity, or, pure subjectivity. What is this pure conscious activity, or pure subjectivity? According to Sartre, it is directionalism, or intentionalism, of consciousness. When consciousness surpasses itself to reach the object, it directly "reveals" or "shows" the object, without the aid of any medium. Sartre believed that what he said as this pure conscious activity or pure subjectivity was an extremely outstanding discovery, that it directly merged together subject and object, and that it banished not only materialism but also idealism and had them unified. However, people can readily see that Sartre's pure consciousness or pure subjectivity actually banished only materialism and not idealism and that what he stood for and propagated was intuitionism of a kind of nonrationalism.

After "discovering" this starting point of pure subjectivity or pure conscious activity, Sartre proceeded to base on it to introduce two radically different areas of existence. He termed one "existence-in-itself" or "self-being," and the other "self-made, or self-doing, existence."

The so-called "existence-in-itself" refers to the outside world. Outwardly, Sartre did not negate the existence of the outside world, but rather admitted that the outside world, even before its discovery by people, had already existed "in itself." He even criticized the views of Barclay and others which summed up the outside world as man's sense of feeling. But what Sartre called the outside world was entirely different from what proponents of materialism called the outside world. Sartre believed that the outside world existed in a pure and absolute manner and itself carried no significance, that it was devoid of causality and inevitability, that it lacked initiative, that it was in a confused, accidental and fantastic state, that it has no progress, forever being "oneself equivalent to oneself," that it was opaque, dark and gloomy and that people were unable to understand it either through feeling or rational thinking. In short, as Sartre saw it, it was a world that defied description. However, Sartre felt that when the direction of man's activity of pure consciousness was set toward the outside world, the outside world would become the outside object of the target of consciousness and would be at once imbued with nature and significance. In other words, the outside world could, insofar as man is concerned, possess essence and significance when illuminated by pure consciousness. The essence and significance of things were not their inherent qualities. On the contrary, they were endowed by man and were not objective but subjective.

The so-called "self-made existence" denotes man's self-existence. In Sartre's view, when man's activity of pure consciousness is directed at man himself, man's self-existence is discovered and from this is generated self-conscious activity. He called this self-conscious activity "self-made existence." Different from "in-itself," "self-made" itself has an initiative and active nature. It continuously negates itself and creates itself. "'Self-made' is always what it is not today, and is not what it is today." ("Being and Nothingness")

Sartre believed that although "self-being" and "self-made" basically differed from each other, they could and must be linked together. Without "self-being," "self-doing" or "self-made" becomes something abstract and cannot exist just as color without coloring and music without high or low tones cannot exist. And "self-being" is revealed and imbued with significance or meaning by the consciousness of the "self-made" man. Without "self-made," "self-being" becomes something without any significance. The two are unified by means of the power of the "self-made." Sartre wrote: "'Self-made' and 'self-being' are linked together by a common medium. The medium is none other than 'self-made' itself." ("Being and Nothingness")

Thus, it can be seen that in reality Sartre wanted to take "self-made," that is, consciousness, as the basis or foundation of the whole world and also the determinant. Although Sartre intended to draw a line of demarcation between himself and the glaringly objective idealists, his viewpoint of unifying the world with man's conscious activities as the basis and the center precisely coincided with the viewpoint of subjective idealism.

Sartre took the discovery of the real existence of man himself as the primary task of philosophy. Just as stated before, he believed that his task was not what man's knowledge could cope with and that resort must be taken to activities of pure consciousness. These activities of pure consciousness were, in reality, psychological experiences of a nonrational nature--in fact, dark and gloomy psychological experiences of a nonrational nature. In this connection, his viewpoint followed the same line as that of Martin Heidegger and other early proponents of existentialism. At one time, Heidegger openly expressed the view that mankind could truly discover their own existence only in such mental circumstances as depression, alarm, or when facing death. Although Sartre appeared to have tried to do away with such dark and gloomy coloring and occasionally had gone so far as to make others think that he was advocating optimism, yet he did not go out of the bounds of the pessimistic and depressed basic ideology of Heidegger and other early proponents of existentialism. He likewise believed that mankind could discover their own true existence only in what he termed as "unfortunate consciousness" such as depression, solitude and despair. He said: "Existence will reveal itself to us through a kind of direct contact such as tiredness, lack of interest, and so forth." ("Being and Nothingness") Sartre took depression, solitude, and despair as man's inheritance and man's basic sentiments. Hence, as he saw it, life is forever in a state of perplexity, confusion and alarm. Given such sentiments to start with, he frequently could see only the world's ugly things and could not see anything good or beautiful. He could see only darkness and not light. Up to a time shortly before his death, Sartre was still saying: "At any rate, the world, as we see it, is wicked and hopeless." ("Hope, Now....")

Summing up the above, the basis and logical premise of Sartre's existential philosophy as well as the starting point for his solution of all problems in philosophy were as follows: That the basic problem of philosophy was man's problem; that man's existence was the existence of the solitary individual; and that the existence of this type of individual was the nonrational activity of pure consciousness, in fact, it was the dark and gloomy nonrational activity of pure consciousness. The subjective idealism and antirationalism of this type of philosophy are especially conspicuous.

Although Sartre repeatedly declared his opposition to idealism, yet, as a matter of fact, he never ventured out of the realm of idealism. At the same time, his philosophy was basically different from what he had announced, that it would help mankind to find a correct road to the restoration of man's freedom and dignity. On the contrary, it could only make man lose his reason and his confidence and entrap him in a mess of confusion and despair. After a big social disturbance and uproar, this type of philosophy can frequently bring satisfaction to a certain degree to people without any ideology and in a state of mental disillusionment. Hence, to a certain degree, Sartre's existentialism is a kind of troubled and hopeless philosophy and at the same time a philosophy which distorts man's nature and lowers man's dignity.

III

The most important constituent parts of the existentialism which Sartre built, with man's subjective character, that is to say, activity of pure consciousness, as the starting point, are his theory on man's self-accomplishments and freedom.

In Sartre's opinion, in the very beginning man existed in a purely subjective character, with nothingness. The various concrete, special and regulated features were what man himself subsequently created in accordance with his own wishes. "First, man came into being, revealed himself, appeared on the scene and only subsequently introduced himself.... In the beginning, man had nothingness; only subsequently man wanted to become a certain thing and made himself in accordance with his own wishes." ("Existentialism Is a School of Humanitarianism") Sartre thus summed up this kind of thought as "existence precedes essence." "Existence" here meant that man, in a purely subjective character, "revealed himself" and "appeared on the scene." The so-called "essence" referred to man's concrete special qualities, of a regulated nature.

Sartre believed that different from things in general man was a continuously self-planning, self-scheming, self-selecting and self-making being in existence. The principal criterion of whether a man truly existed or not was not whether or not he was still living but whether or not he was in the process of continuously planning, scheming, selecting and creating for himself. "After all, man is only something of his own creation. This is the first doctrine of existentialism." ("Existentialism Is a School of Humanitarianism") According to this viewpoint, aside of himself man has nothing else to rely upon; aside of believing in his own planning, scheming and selection, he has nothing else to believe in; and aside of his own decisions, he does not need to obey any other legislation. In other words, what kind of man he becomes is not determined by natural physical endowment, nor by any other outside power, but is entirely the result of his own making and of his own planning and choice. "A coward is of his own making; while a hero is likewise of his own making." ("Existentialism Is a School of Humanitarianism") In short, man is of his own regulation and of his own making.

Sartre termed as freedom these actions of planning, scheming and choosing according to one's own wishes. He called this freedom man's essence and the standard of man's thinking and conduct. He said: "If existence actually precedes essence, then there is no way of using a fixed and 'ready-made' human nature to explain man's actions. In other words, there is no determinism. Man is free and man is freedom." ("Existentialism Is a School of Humanitarianism") He believed that man's real existence was his freedom and that freedom was not man's ordinary attribute but rather the attribute of his essence. "Man forever is completely free, otherwise he does not exist." ("Being and Nothingness")

Sartre believed that freedom was entirely out of the control of objective things and of other power exterior to man himself and that it would not change in accordance with the failure or success of man's actions. The deeper man fell into the chasm of adverse circumstances and the greater his worries, solitude and despair, the greater would be his freedom. This was because under such circumstances man would realize all the more his true existence and an even greater need to do his own choosing. In 1944, Sartre contributed an article to the LITERARY BULLETIN OF FRANCE in which he wrote: "To be in a state of complete solitude and to bear full responsibility by oneself--does this not reveal the nature of our freedom?" Naturally, he could not refute that exterior conditions might curb this or that concrete type of mankind's freedom, but he believed that freedom itself could not be restricted. In other words, Sartre believed that while exterior conditions could restrict freedom of the individual's body they could not restrict the freedom of the individual's thought. Man's freedom of thought was absolute. Whatever conditions might prevail, man could entirely of himself make his choice. A serf was devoid of his master's status and could not act freely like his master, but he could freely choose a method of running away in defiance of his master. Even though he did not choose to run away, he still had the freedom of choice, that is to say, he chose not to make any choice. "Freedom is the freedom of choice, and not the freedom of not making any choice. In fact, not choosing is a choice of choosing not to make any choice." ("Being and Nothingness") It can thus be seen that what Sartre advocated as the freedom of the individual was supernatural, superhistorical and surpassing all realistic conditions, and entirely something of a kind of subjective imagination.

Sartre said that this type of freedom banished the biased ideas of mechanism, fatalism, and other kinds of arbitrarism. Since freedom was acknowledged as the attribute of man's essence, then man should be free from the control of God or any other absolute authority outside himself, and be in a position to entirely reject and resist the oppression by outside forces on himself. He can think and act in accordance with only his own wishes and plan and determine his own future. "Once freedom explodes its power in man's soul, even God is helpless before it." ("Flies") At the time of the occupation of France by the German fascists, Sartre, in his philosophical and literary writings, actually utilized this viewpoint to encourage the French people not to fear violence or danger but to break through fascist domination and fight for their own liberty. At that time, this did produce a certain actual effect. Indeed, under the conditions of the freedom of the masses of people being suppressed by reactionary force, this kind of theorizing of Sartre's may perform a certain role of making the masses of people plunge into **resistance** for the sake of their freedom. However, if under certain special historical conditions, this role is unduly exaggerated (and Sartre himself did unlimitedly exaggerate this role), then it may lead to blunders. On the whole, it may be said that Sartre's view of freedom was a kind of theory of idealism and its role was pessimistic and dangerous.

1. Sartre's view of freedom exaggerated the relative freedom chosen by mankind under certain conditions into unconditional and absolute freedom. It negated fatalism and rejected inevitability. In his view, admission of inevitability and knowledge of inevitability carried the implication of man becoming the slave of inevitability and the curbing of his freedom. In reality, refutation of inevitability cannot obtain real freedom. As Engels pointed out: "Freedom does not mean being independent by shaking off in imagination natural laws. Rather, it means knowing these laws and following up with making, in a planned manner, natural laws serve a definite purpose.... Hence, the freedom of will is only that kind of power which can make use of the knowledge of things to formulate decisions." ("Selected Works of Marx and Engels," Vol 3, pp 153-154) Isolated from the knowledge of objective inevitability, man's actions will invariably be of a blind nature and, under certain conditions, cause man to lose his confidence, become pessimistic and despondent, or, under certain other conditions, to risk all and make a reckless move. Under neither of the above conditions can there be man's freedom.

2. Sartre's view of freedom is a theory of extreme individualism. As mentioned above, he believed that man's real existence could only be his solitary individual existence when segregated from other people and from society. In the same manner, man's liberty could be realized only under conditions of his segregation from other people and society. Other people and society forever imposed certain restrictions on the individual's freedom. Maintaining an individual's freedom would inevitably exclude other people's freedom and even their existence. He said: "Each person has absolute freedom only when opposing other people." ("Being and Nothingness") In many of his literary articles, Sartre described man-to-man relations as hostile relations between them. In his celebrated drama script "No Exit" he even came to the conclusion that "other people represented hell." This kind of description of Sartre's, objectively reflected the actual relations of fighting with each other and deceiving each other amongst people of a capitalist society. While Sartre frequently treated and exposed with disdain relations of this kind, in the last analysis his view of the absolute freedom of the individual performed the role of expounding and proving as well as maintaining this kind of relations. According to this view of freedom of Sartre's, outside the individual's freedom of choice, there does not exist any standard of right or wrong, good or bad. Hence, the capitalist class doing to the proletariat acts of exploitation and oppression and all other fantastic and reactionary acts, may be said to be of free choice and therefore rational. Presumably, this could not have been Sartre's original meaning, but there is little doubt that this is a logical conclusion derived from his viewpoint.

What must be especially pointed out is that this view of Sartre's on absolute freedom which gives a lofty position to the self and places the self in the center provides a theoretical background for extreme individualism and anarchism. This kind of viewpoint, even under capitalist conditions, has a serious passive role and may weaken the struggles for liberation of the proletariat and the working people under a unified revolutionary program and organization discipline. Under socialist conditions, this kind of viewpoint is a corrosive which erodes people's acceptance of correct ideological guidance and impedes mankind's efforts to foster the communist spirit of individual interest obeying collective interest and individual freedom being subservient to the needs of the collective and the people. As for Sartre's views on freedom, we must seriously and realistically analyze and criticize them, so as to banish their evil effects. If not, and if it is allowed to spread freely, then the socialist cause will be endangered.

IV

For a long period of time, in foreign countries, certain scholars' evaluations of Sartre and his existentialism differed greatly one from another. This situation is likewise reflected in our own country. Under the influence of "leftist" thought, in the past our country's theorists frequently made a low evaluation of Western theorists like Sartre and his like. They even went so far as to negate them altogether. In more recent years, certain comrades went to the other extreme and gave Sartre too high an evaluation. Sartre's theory concerning man's self-planning, self-making and freedom of choice has been mentioned with relish by people and even approbated as the road to the growth of talented people or the guidance of life. This obviously does not conform with the principles and standard of Marxism. In order to make a correct evaluation of Sartre and his existentialism, the following points are worthy of our attention:

1. We must insist on the use of the viewpoints of historical materialism to analyze the class attributes of Sartre's existentialism and to expose its fundamental difference from the world outlook of the proletariat.

As a philosophical trend of thought, what existentialism reflects is the spiritual condition of people who are perplexed and alarmed because of being surrounded by the various kinds of contradictions and dangers of modern capitalism, unable to find a way out. At the various levels of the capitalist class, representatives of existentialism may be found, but between them vast differences exist. Compared with the existentialism of Heidegger, founder of existentialism in Germany, Sartre's existentialism does represent the trend of thought of the comparatively lower levels of the capitalist society. Of this we should certainly take note. But we must also note that after all, Sartre's existentialism belongs to the ideological system of the capitalist class and that its basic theory and viewpoints are more or less similar to those of Heidegger and his like. Sartre claimed to have belonged to the petit bourgeoisie and this was probably true. However, we must not forget that the consciousness and pattern of the petit bourgeoisie in a capitalist society frequently suffer from the influences of the capitalist class who are in the ruling position. Hence, we must, from the point of class attribute, draw a demarcation line between Marxism and Sartre's existentialism. We cannot take Sartre's existentialism as a progressive type of consciousness and pattern; nor can we take it as belonging to the proletariat.

2. We must correctly note the difference and liaison between Sartre's political attitude and his philosophical stand.

Sartre's philosophical viewpoints and his political attitude were closely related. In the last analysis, they were determined and controlled by his class position. Indeed, we must not overlook this point. However, we should also note that between Sartre's viewpoints in philosophy and his attitude in politics there was a little contradiction. His existentialism was a kind of idealism in philosophy and we must realistically give it a scientific assessment and evaluation. In the field of politics, we find many progressive expressions, and this we must also confirm. If based on the hard fact that his philosophy of existentialism was a sort of philosophy of idealism we deduce that he was a reactionary theorist and a speaker for capitalism, this would not be correct. Nevertheless, if we fail to note the immense effect his thought in philosophy had on his political attitude, if we overestimate his progressive role, or if we even use it to prove the rationality of his philosophy, then we would be committing an even greater mistake.

Sartre was a person active in vastly different fields such as philosophy, literature, social sciences and politics. His thinking was rather complex and even contradictory. In his writings, many of his discussions and concepts were confusing and not at all clear. Indeed, at different times his viewpoints suffered frequent changes. However, subjective idealism represented the basic viewpoint of his existentialism. This is a point which we must bear in mind if we want to make a correct evaluation of Sartre and his existentialism. If we just look at Sartre at only a certain period, or take note of what he superficially said of certain things but neglect the essence of his thought, or take his words too literally and then come to a conclusion from them, then we shall be far from the truth. Some people made too high an assessment of Sartre's philosophy and even propagated it. This was frequently due to their having a one-sided and superficial understanding of Sartre's philosophy. For example, Sartre's view that existence precedes essence has a materialist element, but some people place it on a par with materialism propounding that matter comes first. In so doing, these people are fundamentally contradicting Sartre's original meaning. What Sartre meant by existence referred to the individual's subjectivity and had an entirely opposite meaning to existence in materialism.

In a word, concerning the category of such Western thinkers as Sartre and the school of the Western philosophy of existentialism, we cannot adopt a simple negative attitude or one of blind worship. Marxism-Leninism-Mao Zedong Thought are sharp tools for the analysis and study of all problems. Hence, in studying and assessing Sartre and his existentialism, we must take Marxism-Leninism-Mao Zedong Thought as guidance. Only in so doing can we make a correct evaluation of existentialism and other Western schools of thought and can we effectively resist their passive and corrosive effects on mankind's thought. At the same time, only in this way can we advantageously insist on and develop Marxism-Leninism-Mao Zedong Thought. On such a problem, we should never be ambiguous or uncertain in our stand.

WELL DONE IN TAKING THE LEAD IN THIS RESPECT!

Beijing RED FLAG in Chinese No 23, 1 Dec 82 inside back cover

[Article by Shi Zhonglai [0670 0022 0171]]

[Text] In the first half of last year, the attendance rate of coal miners throughout the country was low, their work discipline was lax and production plans were not fulfilled as expected. This problem occurs in the workers' contingent. But the fundamental reason was that some cadres failed to exert themselves and failed to correct their unhealthy party spirit. After becoming familiar with the crux of the problem, in the second half of last year, the Ministry of Coal Industry began to rectify the party style and paid attention to cadres going deep among the basic units and working in workshops for a specified period of time. The ministry also persuaded the excavation workers who had come up from the mines because they did not like the work in the mines to return to their position in the mines. By such means their work discipline was strengthened, and remarkable results were achieved.

One of the reasons why production in coal mines under unified distribution could not increase was that a large number of excavation workers had come up from the mines and were not willing to go back into the mines. Those who should not come up from the mines had come up. Why was it so difficult to persuade them to go back to their position in the mines? The situation had much to do with some cadres whose sons and daughters were excavation workers. In persuading the excavation workers who had come up from the mines to go back to their position in the mines, these cadres were the first to be affected. The crux for solving this problem lay in whether those cadres should let their own sons and daughters and relatives work in the mines or whether they should persuade their own sons and daughters and relatives to take the lead in going down into the mines. Under such circumstances, the majority of leading cadres could withstand the test. By overcoming all kinds of pressures, they resolutely persuaded their sons and daughters and relatives to go back to work in the mines, regardless of the resulting rows with their spouse, sons or daughters-in-law or relatives. By the end of June, 994 sons and daughters of leading cadres at headquarter and section levels of coal mines under unified distribution had come back to work in the mines. The exemplary act of these leading cadres was praised by the staff and workers. It brought forward the development of work in this respect. Some people who had thought of keeping away until the event was over said: "It seems we must really act." With these words, they went back to work in the mines. This shows that doing ideological work well, correcting the party style and the exemplary role of leading cadres have important bearings on a truth of universal significance.

Our party is a ruling party. The party's leading cadres at all levels represent the interests of the party and people and the work on various fronts. The ideology, work style and work attitude of leading cadres at all levels are not merely personal matters. They represent the image of the party and have important bearings on the party's work in various fields, on the relationship between the party and the masses and on bringing into play the masses' initiative for building socialism. Comrade Deng Xiaoping said: "The party is the example of the whole society, and the party's leading comrades at all levels are the examples of the whole party." The role of examples is a silent order. It can become a great material power. If leading cadres at all levels can have strong party spirit and excellent work style; if they can take the lead in doing the things they advocate; if they can absolutely not associate with what they require others not to do; if they can strictly adhere to discipline and be as good as their words, the people will be sincerely convinced. If their work style is bad and their deeds do not match their words, the people will not have ease of mind. As a result, their initiative will not be brought into play, the party's principles and policies will not be implemented and it will be difficult to do our work well.

In our socialist enterprises, to bring into play the initiative of the workers and to change the situation in which discipline is lax, besides establishing a perfect production responsibility system, correctly implementing the principle of to each according to one's work and strengthening management and the sense of organization and discipline, it is important to constantly readjust and improve the relationship between men in light of the actual conditions of enterprises. This is a most important content of ideological and political work. Without man, production cannot be carried out, and men have to make constant contact with each other in production. Here the relationship between men will inevitably emerge. In socialist enterprises, the relationship between men should be a new relationship of the socialist and comradely type. The relationship between leaders and those being led, between workers and management personnel and technicians and between workers themselves is an equal relationship between comrades. They should care for each other, love each other, respect each other and discuss problems with each other. Only in this way can they do their work well. There is only the division of work between them. There is no distinction between the elite and the lowly. If there is any distinction, it should be that Communist Party members and leading cadres at all levels should set examples for others, lead the masses in all kinds of work, care for the masses' sufferings and, under possible conditions, do their best to help solve the masses' difficulties. They should not in the least have any special privilege. So long as the party's leading cadres at all levels can act according to the requirements of the party constitution, be strict on themselves, play an exemplary leading role in work and strengthen ideological and political work, the socialist consciousness of the masses can be constantly raised. In this way, the masses can have ease of mind and go all out for the four modernizations.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

COMRADE MAO ZEDONG'S LETTERS AND COMMENTS CONCERNING THE QUESTION OF INVESTIGATION AND STUDIES (APRIL-NOVEMBER 1961)

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 2-3

[Text] A Letter to Comrade Deng Xiaoping (25 April 1961)

Comrade Xiaoping:

Please draft a notice for the convocation of a CPC Central Committee work conference and notify the responsible comrades of all the bureaus of the CPC Central Committee, all provinces, municipalities and regions to arrive at Beijing on 15 May. The members of the drafting committee of the regulations of work of the rural people's commune (refer to the original sample of Guangzhou for the list of members) to arrive at Beijing on 5 May. The tasks of the current conference are to complete the unfinished work left over by the Guangzhou conference, that is, to collect the opinions of the cadres and masses, revise the 60 points of work regulations and continue to rectify the 5 kinds of unhealthy tendencies. The problem of industry and urban rectification will not be discussed or it may be discussed briefly at the end of the conference. We leave this problem to be discussed at the August conference. For this purpose, all comrades who are to attend the conference must use this period of time to conduct focused investigations on certain key problems in the rural areas (such as the problems of canteens, grain, supply, private plots of hilly land, classified management of mountains and forests, farm cattle, the problem of whether production brigades or production teams should manage farm implements, the overall rectification of counties, communes and brigades of the first and second categories and the resolute returning of unlawfully taken things, opposing the idea of bestowing land as a favor, firmly taking the mass line, consulting the masses, energetically encouraging the practice of conducting investigation and study, restoring the handicraft industry and resuming the supply and marketing cooperatives). It is essential to spend 10 to 15 days making investigations and seeking truth from the masses, so that we can thoroughly complete the above-mentioned tasks at the May conference.

Please find Comrade Tian Jiaying to draft this notice with you. We will talk it over this evening and dispatch it by telegram tomorrow. With best wishes!

Mao Zedong
9 a.m., 25 April

A Letter to Comrade Li Jingquan, c/o Comrade Chen Zhenren (6 May 1961)*

Comrade Jingquan of Sichuan CPC Committee, c/o Comrade Chen Zhenren of
Jianyang Pingquan Commune:

I am very happy to have received Comrade Chen Zhenren's letter of 1 May. It will be quite valuable to go to Jianyang once more to conduct an investigation for a week or better 2 weeks. Comrade Jingquan, why didn't you write to me? I was longing for your letter. Did you make any investigation? The CPC Central Committee made a list of investigation items. This was sent to you on 25 April. A further notice was sent on 4 May to postpone the conference to 20 May, so that you could have ample opportunity to conduct investigations and studies and have a thorough understanding of those problems. We hope that the Beijing conference will achieve better results than the Guangzhou conference. In addition, I ask you to do me one more favor: Within these 15 days, I hope the first party secretaries of all the bureaus of the CPC Central Committee, all provinces, municipalities and regions will conduct conscientious investigations and studies with great efforts. You can write to me at any time, it can be informal and do not bother about the handwriting. I expect to receive a letter from you within this half month. If you are so kind as to write to me, I will surely reply.

This letter should also be presented to the CPC Central Committee.

Mao Zedong
Shanghai, 6 May 1961

Comments on Transmitting Comrade Zhang Pinghua's Letter (14 May 1961)

This letter is to be transmitted to the party committees of all the bureaus of the CPC Central Committee, all provinces, municipalities and regions for reference. Comrade Zhang Pinghua, your letter can be transmitted throughout Hunan and it may well be adopted by the party committees of all prefectures, municipalities, counties and communes. It is imperative to firmly take the mass line. It is also essential to consult and decide all matters with the masses and then formulate policies for implementation. It is forbidden for the party committees at various levels not to make any investigations and studies. It is absolutely forbidden for a minority of people in the party committees not to make investigations or consult with the masses, but make the so-called policies in offices that are subjective and harmful to the people.

Mao Zedong
Tianjin, 14 May 1961

---

*This letter was also sent to the first secretaries of party committees of all the bureaus of the CPC Central Committee, all provinces, municipalities and regions.

Comments for the CPC Central Committee in Transmitting Comrade Deng Zihui's Investigation Report (23 November 1961)

Party committees of all the bureaus of the CPC Central Committee, all provinces, municipalities and regions:

Comrade Deng Zihui's report is well made. We present it to you for reference. This document should also be transmitted to the party committees at prefectural, county and commune levels for reference, because at present, all localities are popularly making experiments. It is the soul of Marxism to conduct conscientious investigation and study and make a concrete analysis of specific problems, rather than making abstract and subjective analyses. We suggest that before 20 December, the first party secretaries of all provinces lead certain numbers of work teams and go down to villages to conduct investigations and studies for 10 days or so by adopting the methods of Comrade Deng Zihui.

The CPC Central Committee
23 November 1961

STRIVE TO CREATE A NEW SITUATION IN CHINA'S SCIENCE AND TECHNOLOGY WORK

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 4-10

[Article by Nie Rongzhen [5119 2837 5271]]

> [Text] Editor's note: On 25 November, Comrade Nie Rongzhen gave an interview to Comrade Xiong Fu, chief editor of this journal. He made an important statement on the issue of striving to create a new situation in our country's science and technology work. In his talk, Comrade Nie Rongzhen mentioned the major experiences that he gained during the period when he was in charge of science and technology work, particularly stressing the party's historical experience on the intellectual problem and the problems we should pay attention to at present in implementing our intellectual policies. He points out that we should teach our broad ranks of cadres and masses to understand the position and role of the intellectuals in socialist modernization, develop a new custom of the whole society respecting knowledge, science and intellectuals and strive to form a friendly alliance of workers, peasants and intellectuals. His talk is of great significance in helping all our party members to heighten their awareness and unify their understanding on the problem related to the conscientious implementation of the party's policy on science and technology work and on intellectuals. Here are his remarks.

Ever since the 12th party congress, the initiative of our country's scientists and broad ranks of cadres on the scientific and technical front has been very high. They all hope that our country's science and technology work develops quickly. I can understand this mood. It has been a long time since I left my post of responsibility for science and technology work, but I am still concerned with and will support this work with all my strength. People are all very anxious and so am I.

In my opinion, the present situation is characterized by the fact that in order to fulfill the plan for the development of the coming 20 years, people throughout the country wish the science and technology work to develop more quickly. Recently, in one of his talks, Comrade Deng Xiaoping put forward the problem of organizing science and technology ranks to tackle major technical problems hurdles, regarding it as a matter of first priority in carrying out the 20-year development plan. It is very clear that developing the four modernizations, making our economy prosper, building up the two civilizations and achieving the magnificent goal of quadrupling all depends on progress in developing science and technology. At present, the key to our modernization lies in satisfactorily developing our science and technology work and giving full play to the role of intellectuals in this field.

Take agriculture for example. We are faced with quite a large number of agricultural scientific and technical problems. How can we modernize the whole country, if we cannot solve the problems related to agriculture? The modernization of agriculture can never be divorced from science and technology. The first character of the "eight-character constitution" for agriculture is soil. Soil constitutes the foundation of agricultural production. China is so vast that the soil in its territory differs widely in its composition, physical, chemical and ecological nature and fertility. In order to develop diversified undertakings that are suited to the local conditions, we must do a large amount of work to investigate the soil conditions in a widespread manner. It will take an even longer period of time to improve our soil. In this respect, we need the joint efforts of the specialists of various fields. In the past, excessive lumbering, the creation of "Dazhai land" and the practice of reclaiming land from lake areas gave rise to serious soil erosion and undermined the ecological equilibrium of nature. We should put to an end forever these foolish practices that go against the objective law. The second feature is water. The establishment of irrigation systems needs the joint efforts of the specialists in water conservation, geology and other fields. In this respect, there is also the problem of taking the local conditions into account. In the north where there is little rainfall, we should not blindly develop irrigated land. Excessive use of underground water in the suburban areas will bring about serious results and may even cause the land to subside. There are also the problems related to pesticide and fertilizers. Some kinds of pesticide seriously pollute the environment and are no longer used abroad, but we continue to use them. We should pay greater attention to using biological methods to overcome pests. The excessive use of fertilizer may destroy the organic composition of the soil. All these problems cannot be solved without science and technology and must be solved through the research of our specialists. The third feature is seeds. Having fine species of seeds is an important means of increasing agricultural production. The popularization of the hybrid rice of high-land type and the No 1 Lu strain of cotton alone has already created more than 1 billion yuan of wealth. There are also the problems related to thick planting and deep plowing. The American Han Ding opposes deep plowing. These problems also should be solved by specialists through research. In short, the solution to all of these problems lies with science and technology or with the efforts of specialists in soil science, water conservation, botany, genetics, entomology and other fields. Now our party's policies are right and since the establishment of the agricultural production responsibility system, the peasants' initiative has been greatly heightened and agriculture has developed relatively quickly. However, there is a limit to giving play to the initiative of the peasants and a state of "saturation" will be reached some day.

However, the potential for increasing production that science and technology can bring to agriculture is infinite. Our peasants understand this idea and have already tasted the benefits of scientific farming, so they are eager to use science. Now agricultural technicians have already become "gods of wealth" in our rural areas. Our peasants are vying with one another in seeking the advice of these technicians. This is a very heartening phenomenon. This is also true for our industry that also has to rely on the strength of science and technology. For example, cadres in such medium-sized cities as Xiangfan, Changzhou, and Siping understood this idea earlier. As a result, the industrial development in these cities has been quicker and some of the products there have already surpassed Shanghai in their quality. We must realize this trend of development and welcome the arrival of a scientific and technical upsurge in our country.

Now the problem for which the broad ranks of cadres on the scientific and technical front show the greatest concern is how we are to create a new situation in our science and technology work. Let me mention a personal experience. In 1956, I began to replace Comrade Chen Yi as the responsible person for science and technology work. When I was in charge of this work, Premier Zhou and Comrade Chen Yi were leading the formulation of the 12-year national development plan of science and technology. Generally speaking, at that time, the number of our technical and scientific workers was small, their level was low and their working and research conditions were poor. However, because the party Central Committee paid great attention to this work and many major issues were directly handled by Chairman Mao and Premier Zhou, we made great progress in a very short period of time. In 1964, we succeeded in exploding an atomic bomb and 2 years and 8 months later, we again succeeded in exploding an H-bomb. Many new industrial departments have been developed to fill the gaps of our country's scientific and technical field.

I think that in order to do our science and technology work well, we should do the following:

1. We should be self-reliant. Chairman Mao said that our country is first of all poor and second of all unmarked, but that the largest number of the best pictures could be drawn on a piece of blank paper. We are not afraid of having nothing on the paper. Since there is nothing on the paper, we can draw pictures as we please. In order to satisfactorily build up our country and draw the best and most beautiful pictures, we cannot rely on anybody else. We must rely on ourselves, on our workers, peasants and intellectuals. Our principle of self-reliance can be said to be the consequence of outward force. Khrushchev one-sidedly broke all the agreements and withdrew all his experts without leaving anything, even the blueprints, for us. Since he would not give these things to us, we had to rely on ourselves. This resulted in our success in making the atom bomb and H-bomb and

the development of all sectors. It was a very fortunate thing that we were forced to rely on ourselves. When we succeeded in exploding our first atomic bomb, Chairman Mao humorously said that we had to grant Khrushchev a great medal weighing 1 ton as a token of our "gratitude." Of course, our self-reliance by no means signifies a closed-door policy. We should conscientiously introduce new technology and equipment and purchase patents from abroad. We should learn and take over all those that are useful to us and make them serve our modernizations. We must understand, however, that we cannot buy modernization from abroad with money. The new technology and equipment we have bought should be assimilated through study and then be transformed and developed in the light of the actual conditions in our country. On the problem of introducing things from abroad, we must always be sober-minded. We wish to introduce advanced technology and equipment from some capitalist countries but these countries have publicly declared that they will only sell the second most advanced things and will not sell the most advanced ones. Some people find that it is too slow to develop by ourselves. I say that it is slow in some respects, but it is more reliable. Moreover, to take a long-term view, it is much quicker than the speed we can achieve if we completely rely on imports. Did we not quickly take the fortification of the sophisticated technology of the atom and H-bombs by relying on our own strength under very difficult conditions in the past? Now that we have such favorable conditions, it is out of the question that we can succeed by relying on ourselves. That is why I always advocate self-reliance, consider things from the viewpoint of basing things on development of our national industry, and scientific and technical undertakings and stress raising the scientific and cultural level of the whole nation. In the final analysis, we have to rely on our own strength. Therefore, self-reliance is our starting point. At the same time, we should pay attention to introducing advanced technology from abroad. We have done this work for decades and have already laid a certain foundation. I agree with Comrade Zhao Ziyang's view on technical transformation and on science and technology work serving economic construction expressed in his report to the recent NPC session. In my opinion, by relying on technical transformation, conservation of energy and the research into, exploitation and development of new technology, we will be able to increase production and promote the development of science. It will not do, if we import everything from abroad, rely on imports for everything or worship and have blind faith in things foreign.

2. We should formulate appropriate plans for the development of our science and technology. Having formulated a plan, we have a destination for our march and a goal to achieve through our striving. In 1956, we concentrated a few hundred scientists and technical workers to spend nearly 10 months in drawing up a 12-year science and technology development plan. Thus we clarified the key projects and persisted in developing scientific research first. This plan took into account the requirement for scientific and technical development of all sectors as well as stressing the 57 key projects. Later, because Khrushchev tore up the agreements, we shifted to stressing, regarding as key projects and organizing all the trades and professions to tackle jet propulsion technology, atomic technology and electronics. Our practice has proved that this kind of science and

technology plan that gives priority to scientific research and combines key projects with common projects can play a satisfactory role in organizing and promoting the development of our country's science and technology.

3. We should organize our ranks well. After we have formulated a plan, we should organize our scientific and technical personnel to realize this plan. At that time, the numbers of our scientific and technical personnel were small, their foundations were weak, their tasks were heavy and the difficulties facing them were very great. For example, we did not know much about jet propulsion technology and atomic energy and we could only buy some materials from abroad to read. However, we could only get a rough idea from these materials because the detailed technical materials were confidential and could not be bought anywhere. What were we to do? According to the unified national plan, we organized five contingents, namely, the research institutions, the higher education institutions, the industrial departments, the national defense science committee and the local scientific research force, and assigned to these contingents clearly defined tasks according to their strong points. Since we had a unified plan, no one could carry out his work at his will without taking into account the work of other people and all people closely coordinated and copperated by means of division of labor and jointly tackle the major technical problem hurdles. This was a nationwide cooperation and coordination of all the activities of the nation like pieces in a chess game. At that time, all the units were willing to accept whatever tasks were assigned and felt glory in doing them because these tasks were assigned and felt glory in doing them because these tasks were what all our party members, all our army and the people throughout our country wished and trusted them to fulfill. After these five contingents were mobilized, people supported one another. If only the fraternal units have the need, the coordinating units will give all-out support and facilitate things, either in technical know-how or in material supplies. There were no malpractices of shifting responsibility or mutual blockade, therefore the work efficiency was very high.

At that time, our ranks of scientific and technical personnel were small and were to be expanded through continuously recruiting new workers. We paid great attention to the problem of distributing jobs to college graduates and returned students from abroad. If any of them was not assigned a job related to what he had studied, was not properly assigned or had nothing to do through being assigned a job, we had the power to make adjustments and assign him to a new job. As we were in charge of the tackling of the major problem hurdles, we knew what kind of people were needed by which department and how to assign jobs properly. This was done in the manner of a commander in chief directing a battle. He had to know the kind of troops that were needed on which front and how many troops were needed. Having taken the personnel power in our hands, we combined the management of the tasks with that of personnel. As a result, we enabled these young intellectuals to utilize their strong points and get appropriate jobs, thus, they vigorously struggled in the van under the guidance and command of old specialists and played a material role in tackling the major technical problems hurdles. Now they have already become the backbone force on various fronts.

4. We should strengthen the centralized unified leadership. Modern science and technology differs widely from that in the 18th and 19th centuries. At that time, scientific research was often the result of the independent efforts of individuals and an individual was able to achieve many inventions and discoveries in his life. Things are vastly different now. True, some research of basic theory and technology, such as research in certain mathematical theories, can be done by adopting old methods, but the research of major basic theories and the research and manufacture of major projects and equipment must be done by means of modern experimentation. Therefore, an individual, unit or even a whole trade or local area does not have sufficient resources to carry this out and we have to concentrate the strength of the whole nation in doing it. In manufacturing guided missiles, atom bombs, airplanes, warships and computers, we needed many new-type materials and sophisticated apparatuses and precision instruments. At that time, these things were not available either at home or abroad. We organized our own force to produce them by division of labor and cooperation and fixed a deadline for the fulfillment of the tasks. At that time, we needed more than 13,000 kinds of new materials and none of these materials had ever been produced at home. Because of the centralized and unified leadership and the vigorous coordination and cooperation, however, we succeeded in testing all these materials in a short time which all satisfied the prescribed state quality standards. To satisfy the need of the development of science and technology work, we organized the force of the whole nation to test produce the "nine major equipments" for making the special types of materials that were of particularly great thickness, thinness, breadth and length. It was a pity that the "Great Cultural Revolution" put an end to all these efforts; otherwise, the technical level of our country's industry would have reached a higher plane. This was an obvious example of science and technology promoting industrial development. If we had not concentrated our science and technical force and did not have the centralized command of our scientific and technical personnel, we would not have fulfilled such magnificent tasks even if we had wished to. These centralized efforts resulted in successes in making products of highly sophisticated technology, the corresponding development of many new industrial sectors and the corresponding establishment of many new branches of learning. People call this period the "golden age" of our country's scientific and technical work. This tells us a truth that in doing all our work we have to proceed from the needs of the state and that this is the starting point for us in considering and handling problems. As long as the state has the need, we should take up the management. We should not be apprehensive of managing too many things. We should manage the personnel, finance and materials because the state needs us to take them up in our management. It is also because of the state's needs that we demand centralized and unified planning, the mobilization of the five contingents and their coordination in solving the contradictions that have emerged. Thus we will be able to bring about the greatest return for our limited resources of labor, materials and funds and avoid the dispersion of the work force and duplication of scientific research projects.

At that time, we called this method of tackling major technical problems hurdles under centralized and unified leadership "developing branches of learning through the processes of fulfilling tasks." This is a good method of developing science and technology. Of course, this is not the only method. Modern science and technology is very complicated, so we should adopt many ways of developing it and should not seek a "uniform" method. We must not discriminate against the research of basic science. Basic science and applied science supplement one another. We should be more far-sighted and should not look down upon basic scientific research because it does not bring along any tangible economic results in a short time. Basic scientific research is the foundation of applied scientific research. Therefore, it is impossible to carry out applied scientific research without a certain amount of basic scientific research. Our principle must be "strengthening applied scientific research while paying attention to basic scientific research" as was pointed out in Comrade Hu Yaobang's report to the 12th party congress. Premier Zhou expounded on this problem in the past and recently so has Comrade Zhao Ziyang, time and again.

The 12th party congress has already formulated a magnificent plan for socialist modernization and the Fifth Session of the Fifth NPC will soon examine, discuss and approve the Sixth Five-Year Plan. The prospects of socialism are as beautiful as a silk embroidery. Now the problem is the earnest implementation of the policies related to our intellectuals. Recently, Comrade Deng Xiaoping said that in order to actually achieve the 20-year development plan, in order to complete the construction of a large number of major key projects and in order to tackle major scientific and technical problems hurdles, "the first thing we should do is soundly solve the problem related to the management and employment of our scientific and technical labor force." He said that "in order to break the boundaries of departments and localities, and rationally employ this force, we must unify its management. This will be impossible, if we do not have a strong authoritative organ." I fully agree with this opinion. Now, we have a scientific and technical labor force of more than 5.7 million people. This is not a small technical force. We have some fundamental scientific research equipment and a larger amount of funds. These conditions are much more favorable than those when I was in charge of this work. Now, we are speeding up the development of integrated circuits, especially the development of highly condensed ones with extremely great speed and also the new generation of computers. This is of tremendous significance in promoting the development of science and technology. As long as we overcome decentralism and departmental selfishness and strengthen our centralized and unified leadership, as long as we put an end to the malpractices of shifting responsibility to one another and of mutual blockade, but on the contrary, exercise unified planning, coordinate all the activities of the nation like pieces in a chess game, carry out a rational division of labor, support one another and carry out nationwide cooperation and as long as we give full play to the superiority of the socialist system, we will be able to create a new situation in our country's science and technology work and bring along a new "golden age" in this work.

The key to the four modernizations is the modernization of science and technology. In order to achieve the modernization of science and technology, we should rely on the intellectuals who master modern science and technology. Without intellectuals it will be impossible to achieve either the four modernizations or the magnificent goal of quadrupling. This idea has recently been repeatedly propagated in our press. However, some people are still not convinced, and think that the party has gone too far in implementing its policies related to the intellectuals. This is a very erroneous viewpoint and is very harmful to the socialist cause. We must teach these people to correct their views and to treat this problem with a strategical view. The prejudice of looking down upon knowledge and science and discriminating against intellectuals was originally the reflection of ignorance and backwardness. As a legacy of the old society, it has been of long standing in our society. This prejudice also has its influence in our party. Aggravated by the influence of the "leftist" ideology, various kinds of prejudice of looking down on and discriminating against intellectuals have emerged in the minds of some of our cadres. This also has a very long history. During the period of the Red Army, the medical and telecommunications personnel came from KMT troops. This work could only be done by employing these people because the worker and peasant cadres were not capable of doing it. With the education of the party, these people quickly became our technical cadres and some of them became ministers of our government after the founding of the PRC. They have played a very satisfactory role in our revolution and construction. At that time, they were paid salaries of money, while our commanders in chief and political commissars received their payments in kind instead of money. They led a better life than us. However, some people did not think this was right and complained. During the war of resistance against Japan, we had our base areas, field armies and border area governments and needed to set up hospitals and industrial enterprises and arsenals to make and repair weapons. Moreover, we had to carry out radio telecommunications and establish newspaper offices and broadcast stations. Thus we needed a larger number of intellectuals to join the revolutionary ranks. However, there were obstacles and the intellectuals suffered discrimination. Therefore, in 1939, the party Central Committee issued the "Resolution on Recruiting a Large Number of Intellectuals." Since then, a large number of intellectuals came to the liberated areas.

This problem was not solved after the liberation of the whole country and there have always been conflicts on it. In 1956, the party Central Committee held a national meeting on problems related to the intellectuals, in which Premier Zhou gave the "Report on the Problems Related to Intellectuals." He pointed out that at that time, the main tendency in our party on the problems related to the intellectuals was factionalism, an underestimate of the tremendous progress in politics and in their work of our intellectual circles, an underestimate of the intellectuals' important role in our socialist cause and an ignorance of the fact that the intellectuals were a part of the working class. He emphatically expounded on the position and role of the intellectuals in our socialist construction. He said: In the final analysis, the reason why we should build up a socialist economy is to satisfy, to the greatest possible extent, the constantly increasing material and cultural demands of the whole society. In order to achieve this aim, we must continuously develop a social productive force and raise labor productivity and must constantly increase and improve socialist production on the basis of a highly developed technology. Therefore, during the period of socialism, we have a demand even more urgent than in any other period for fully raising our technology of production and for fully developing science and utilizing our knowledge of science. Therefore, apart from the necessity of relying on the conscientious labor of the working class and the broad ranks of peasants, it is necessary for us to rely on the conscientious labor of the intellectuals. In other words, we must rely on the close cooperation of manual and mental labor and the fraternal alliance of workers, peasants and intellectuals, thus the problem was initially solved. However, a reverse tendency emerged in 1957 and 1958.

At the national scientific planning conference and the national conference on theatrical creation held in Guangzhou in 1962, many scientists, writers and artists again aired their views on intellectual policies. Consequently, discussions on an intellectual issue were added to the agenda of the Guangzhou conference. Premier Zhou personally attended the conference. Premier Zhou, Comrade Chen Yi and I, as well as Comrade Guo Moruo, discussed this issue on several occasions. We held that intellectuals are not an independent class. They can serve the bourgeoisie and they can also serve the proletariat. We have engaged in socialism for many years and most of the intellectuals have been trained by us since the founding of the PRC. How can we say that they are bourgeois intellectuals? We proposed to "remove the label from the intellectuals and provide them with a halo" by removing the label of bourgeois intellectuals and proclaiming them intellectuals of the working people. Premier Zhou, Comrade Chen Yi and I spoke at the meetings. Premier Zhou delivered the first speech. He expressed his heartfelt pleasure at the growth and development of the ranks of our intellectuals. The generation of old intellectuals had succeeded in training a generation of new intellectuals, both of them forming socialist intellectual circles. They had made tremendous progress after 12 years of transformation and trials. Like the workers and peasants, most intellectuals love the motherland. The premier said, we were greatly moved by your great love for the motherland. This was the pride in our intellectuals!

Before his return to Beijing, Premier Zhou asked Comrade Chen Yi to deliver a speech announcing the removal of the label of bourgeois intellectuals. Comrade Chen Yi first transmitted to the scientists, writers and artists attending the conference Premier Zhou's words that they were the intellectuals of the people, revolutionary intellectuals, and mental laborers who served the proletariat and should be freed of the label of bourgeois intellectuals. "The workers, peasants and intellectuals are the three component parts of the Chinese working people." He emphatically said: "We should no longer put the label of bourgeois intellectuals on all intellectuals after 12 years of transformation and trials." Comrade Chen Yi made it fairly clear by saying, "They are still uncomplaining, are still willing to follow us and still do not lose confidence in the Communist Party after 12 years of transformation and trials. We can at least see a person's heart. If the Communist Party still fails to test or distinguigh a person in 8, 10 or 12 years, the Communist Party does not have foresight!" "Did

Marx, Engels, Lenin or Chairman Mao ever say that the Communist Party does not respect knowledge and science? No one has ever made such a remark. Ignorance is a great enemy. Imperialism is an enemy, feudalism is an enemy and ignorance--with hundreds of millions of people having no knowledge and no scientific knowledge--is also a great enemy."

After being "freed from the label and provided with a halo," the broad section of our intellectuals felt warm to the bottom of their hearts. Pleased and active, they were quick in attaining many achievements in scientific research. This is the fundamental reason for the emergence of the "golden age" in our scientific and technological work.

If we look through history, we can see that we did the work of "removing the label from the intellectuals and providing them with a halo" as far back as in 1962 during the Guangzhou conference. The conclusion affirming that the intellectuals are socialist laborers and a part of the working class was reached at that time. However, the emergence of the "Cultural Revolution" overthrew all this. Under the sabotage of Lin Biao and the "gang of four," intellectuals were again labeled as "bourgeoisie," "reactionary authorities" and "the stinking ninth category." They were severely hit and humiliated and were unable to stand up. It was necessary for the leading comrades of the party at various levels to actively create good working conditions for the scientific and technical personnel and take good care of them politically and in their livelihood. During the difficult period, in an effort to care for the scientists, I called in the aid of the navy for some fish, in the aid of the Beijing and Guangzhou Military Regions and the Xinjiang Military District for some meat and in the aid of some other localities for some soybeans and edible oil. In the first place, their labor was a very arduous one, and they shouldered a very important task of tackling key problems. The party should take good care of them. However, right and wrong were confounded during the "Cultural Revolution." All this was regarded as the "revisionist line" and was criticized until it was "discredited." They criticized what they called "scientific and technical fish" and "scientific and technical meat." The "leftist" errors developed to a very high degree. This not only subjected the intellectuals to great humiliation but also China's scientific and technological undertakings and even the entire social undertaking to great damage. In the late 1950's, we marched toward the modernization of science and other new branches of learning, with such modernizations as transistors, calculators and lasers. At that time, some Western countries had also just started at the beginning. Twenty years later, the gap between foreign countries and us is greater. This is a fact known to all. Therefore, judging by the history of our party, it has never been able to dispense with intellectuals, either in its revolutionary or construction cause. Whenever we pay attention to intellectuals and adopt a correct policy toward them our cause makes progress and develops. On the other hand, whenever we discriminate against intellectuals and adopt an erroneous policy toward them our cause suffers a setback. This is particularly true in the period of socialist construction.

Since the smashing of the "gang of four," particularly since the 3d Plenary Session of the 11th CPC Central Committee, the party has, in the course of setting things to rights, reexamined and established the party's policy toward the intellectuals, reaffirming that, by and large, the intellectuals constitute a component part of China's working class. Comrade Deng Xiaoping has delivered many speeches on this issue. Consequently, the intellectuals throughout the country are pleased and have peace of mind for being able to stand up. They have made great contributions by actively working on various fronts. The party has now made clear its policy toward the intellectuals and has issued repeated injunctions on its implementation. The "Revised Draft Constitution of the PRC" submitted to the current NPC for consideration has also made clear in its preamble that in building socialism it is imperative to rely on the workers, peasants and intellectuals. That is to say, the workers, peasants and intellectuals are the three main social forces in our country and form the principal part of our people. It is necessary to tell the broad section of our cadres and masses to fully understand the position and role of the intellectuals in our socialist modernization.

There are some people who say that "our evaluation of intellectuals is exaggerated" and that intellectuals are "cocky once again." These words are groundless. At present, our implementation of the policies related to the intellectuals has just begun and the resistance we are encountering both within and outside our party is not small and can be regarded as being quite stubborn. I had a talk with a GUANGMING RIBAO reporter in August of this year. Most people approved of this talk when it was published in the newspaper. There were also people who opposed this talk, criticizing the comrades in the GUANGMING RIBAO office for speaking on a bourgeois stand. I have indeed offended some people on this issue. However, what is to be done? We must continue to fight for the interests of the party and state, for the four modernizations and for the overall implementation of our intellectual policies.

On the question of implementing the policy toward the intellectuals, it is still necessary for our press and press institutions to make a loud appeal to the public. It is no good to talk about it in general terms; it is necessary to make a public criticism. It is also no good to make a mild criticism; it is necessary to make a sharp criticism. Sometimes it is even necessary to conduct some struggles. Neither Marx nor Engels said that all intellectuals are reactionary. They always made a concrete analysis of intellectuals and gave different evaluations to different intellectuals. Both Marx and Engels fully affirmed and highly evaluated the contributions to human progress made by such great scientists as Newton, Galileo and Darwin. Engels also specifically said that even under the capitalist system, it is also possible to turn out from among the university students "a king of proletariat who engages in mental labor" and who fights shoulder to shoulder with the fraternal workers engaging in manual labor. For this reason, it is necessary for us to conduct ideological education through various means to enable the broad section of cadres and masses to understand the idea that in developing modernization, making our economy prosper, carrying out the construction of the two civilizations and achieving the goal of quadrupling by the end of this century, we cannot dispense with scientific and technical progress and we cannot dispense with intellectuals.

At present, we have to pay particular attention to giving play to the role of middle-aged intellectuals. The middle-aged intellectuals ranging from 40 to 50 years old are a generation of new intellectuals who grew up under the direct cultivation of the party. They are a generation serving as a link between the past and future, carrying forward the revolutionary cause and forging ahead into the future. They love the motherland, socialism and the party and they never change their original intention, even under adverse circumstances. Having laid a relatively solid foundation in professional knowledge, they have made great contributions in the field of science and technology to the cause of China's modernization program. These middle-aged intellectuals are the backbone on all the fronts. The heavy task of developing modern science and technology, building both material and spiritual civilization and raising the scientific and cultural level of the whole nation rests on their shoulders. This is a glorious mission entrusted to them by history. They have a heavy work load and have made great contributions. However, their salaries are low and they have a lot of difficulties in their livelihood. The party's policy toward the intellectuals has not been completely implemented among them. In many departments and localities, they have not received their due respect and good care. The problems related to their working and living conditions have not been solved in a satisfactory manner. This merits the attention of our leading comrades at various levels, particularly the leading comrades in factories and institutions. The academic ranks and titles of intellectuals should be solved in a satisfactory manner. However, there is also the problem of pay and conditions that should be gradually solved by adopting various specific measures. In short, improving the working and living conditions of middle-aged intellectuals has become a very urgent issue. Marx said long ago that mental labor is a complicated one that should receive relatively better remunerations. We should considerably increase their salaries. We should practically solve this problem by overcoming the egalitarian mentality in our ranks. It is necessary to free the intellectuals of their trouble at home so that they can wholeheartedly engage in the four modernizations.

The advanced deeds of Comrades Jiang Zhuying and Luo Jianfu publicized in succession recently by GUANGMING RIBAO and GONGREN RIBAO are very touching. The communist spirit of these two Communist Party members is worth our learning. They had bright prospects in the first place because they had high consciousness and made great contributions to the state. Comrade Wang Daheng, director of the Changcun Optical Machinery Research Institute where Comrade Jiang Zhuying worked before his death, is a noted Chinese opticist. He had made a great contribution to the optical cause of our country. Comrade Jiang Zhuying was precisely a student of his pride, to whom he was going to hand over the future task. It was a pity, however, that Comrade Jiang Zhuying died while he was "tackling key problems." This constituted a loss for the state. Such intellectuals as Jiang Zhuying and Luo Jianfu are excellent representatives of the contemporary Chinese intellectuals and are a valuable treasure of the party and state. We all deeply regretted their unfortunate early deaths. What is more important, however, is that the leading party and government cadres at various levels should take good care of and show great concern for thousands upon thousands of living Jiang Zhuying's and Luo Jianfu's. We should draw lessons from the early death of these middle-aged intellectuals. Have the leading comrades of our party and government organizations at various levels failed to do what they ought to have done and take better care of them? It should be noted that, as far as our country is concerned, our scientific and technological personnel are not many but are few. Those scientists and technical experts who love the motherland, work diligently and conscientiously and have real ability and training are our national treasure. Naturally, the intellectuals also have their shortcomings and not all intellectuals are competent persons. I hope all intellectuals will study hard, strive to make progress, overcome their shortcomings, raise their professional standards and strive to become both Red and expert and make more contributions to the motherland.

EDUCATE THE PARTY MEMBERS IN THE NEW PARTY CONSTITUTION, MAKE IDEOLOGICAL PREPARATIONS FOR PARTY RECTIFICATION

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 11-16, 24

[Speech by Song Renqiong [1345 0117 4522] on 19 November 1982 at the national conference on educating party members]

[Text] Comrades, this national conference on educating party members is an important meeting for implementing the 12th party congress spirit, studying and making arrangements for education of party members in accordance with the demands of the new party constitution, and preparing for party rectification. I now want to give some views.

I. The New Party Constitution Is the Best Since the Founding of the Party

The new party constitution since its promulgation has drawn a strong response inside and outside the party and at home and abroad. Many comrades hold that the new party constitution "is the quintessence of the party's historical experience and of the wisdom of the whole party" and is "the weapon for rectifying and building the party." The new party constitution affirms in charter form the correct line since the third plenary session, and there are great prospects for our party and our cause.

A number of foreign publications and press agencies have also held that the new party constitution is "sober and realistic in tone," "expresses the resolve to refurbish the party work style," and has laid down a "Chinese-style path for building socialism."

How should we judge whether a communist party constitution is good or not? There can only be one criterion and that is whether it is solved well or not the question of integrating Marxism-Leninism with the practice of a country's revolution. I will now apply this criterion to analyze the question of why we say that the constitution of the 12th party congress is the best since the founding of the party.

1. The new party constitution meets the needs of the governing party. Ours has been the governing party for more than 30 years. The constitution of the eighth party congress touched on this question. However, as the state had not been in existence long at that time, the conditions for solving this

question were not sufficiently ripe. The constitution of the 12th party congress takes full consideration for the position of the governing party and has appropriately made a series of specific regulations for ensuring that the organizations at all levels of the governing party and all its members have rules to follow. The party constitution includes for the first time the stipulation that "the party must conduct its activities within the framework of the constitution and the law." Ours is the governing party that leads political power in the whole country. The party's line, principles and policies are the concentrated expression of the common interests and will of the people of all nationalities throughout the land. Through the constitution and the laws formulated by the state organs of power, our party's leadership of the people of the whole country is also the concentrated expression of the common interests and will of the people of all nationalities throughout the land, and has also become the will of the state. Hence, under our socialist system, the will of the people, the state and the party are identical. For Communist Party members, no matter what post they hold, practicing and adhering to the constitution means carrying out the will of the party. Any tendency of setting the constitution and the law against the tasks of the party, of weak concept of law and discipline, or of failure to observe the law or to strictly enforce it will weaken the position of the governing party. All such tendencies are intolerable. Everyone still remembers the incident that occurred a few years ago: The masses asked us "whether the constitution or the county CPC committee is the greater." This is a simple question and also a sharp criticism. The new party constitution has now made a totally unequivocal reply to this question. The position of the governing party poses new demands not only on the framework of the party's activities but also on the party members and cadres. The constitution of the 12th party congress lays down regulations suited to the position of the governing party with regard to the rights and obligations of party members, the basic conditions for party cadres, and the tasks of the party organizations at all levels. The new party constitution demands that the party members "always be ordinary members of the laboring people," that "party cadres are the people's servants," that "apart from individual interests and work duties within the framework stipulated by the system and policy, no party member may pursue any private interest or special powers," and that "the party's leading cadres at all levels, whether they were democratically elected or appointed by the leading organs, do not hold their posts for life, and all of them can be transferred or relieved of their posts." The appearance of these stipulations in the new party constitution shows that our party has become a mature governing party.

2. The new party constitution meets the needs of bringing order out of chaos. Many of the clauses of the new party constitution can be described as correcting the mistakes of the 10 years of internal disorder and consolidating the results of bringing order out of chaos. The new party constitution gives a complete and scientific outline of the party's ideological line: "Proceed from reality in everything, link theory with reality, seek truth from facts, and test and develop the truth in the course of practice." This is a summation of the party's positive and negative experiences in ideological line for a long time in the past, and is also the ideological

weapon for continuing to bring order out of chaos in all respects in the future. The new party constitution stipulates that "the party prohibits any form of personality cult." This shows that our party has absorbed the serious lessons of indulging in personality cult in the past and is resolved to establish correct relationships between the leadership and the party and between the leadership and the masses in accordance with the historical materialist viewpoint. The new party constitution also stipulates that "no party member, no matter how high or low his post, may decide himself on major issues." This has always been our party's consistent principle. It has also been put forward in the light of the serious damage suffered by the party in the past as a result of the individual autocracy with "one person having the say" that appeared in our party for a time in the past.

3. The new party constitution suits the needs of socialist modernization. In accordance with the main contradictions in Chinese society, the party's general task in the present stage, and the focus of party work, the new party constitution gives prominence to socialist modernization. This is the first time that a party constitution has assigned such an important position to the task of modernization. The new party constitution also stipulates that "party leadership is mainly political, ideological and organizational leadership." This has thus solved in principle the major question of how to uphold party leadership in the cause of China's socialist construction, and has prevented lack of division of party and government and of party and enterprises, with low work efficiency, from continuing to affect the progress of the cause of socialist construction. The new party constitution stipulates that the rank of party cadres must be revolutionized, younger, better educated and more specialized, that the party cadres must "undergo party training, investigation and examination," and that the leading cadres at all levels must meet six basic criteria. The party's cadres are a backbone force in the socialist modernization cause, and building a high-quality cadre force is precisely a stipulation of strategic significance that our party has laid down in order to meet the needs of the new period.

4. The new party constitution suits the needs of building socialist spiritual civilization and socialist democracy. Enhancing the masses' communist awareness, so that the people will genuinely become the masters of the country, is an expression of the superiority of socialism, and is also an historic task shouldered by the party. The new party constitution points out in its general program: "While leading the people to build a high degree of material civilization," the party "leads them to build a high degree of socialist spiritual civilization," and it must "lead the people to develop socialism, put the socialist system on a sound basis, and consolidate the people's democratic dictatorship." The new party constitution therefore puts forth a whole series of specific demands regarding the stipulations on the tasks of party members, party cadres and party organizations at all levels.

5. The new party constitution suits the needs of achieving a fundamental turn for the better in party work style. The three basic demands put forward by the new party constitution regarding a high degree of ideological and political unity, wholehearted service for the people, and the upholding of democratic centralism express in concentrated form the strong will of our party to achieve a fundamental turn for the better in its work style. In order to fulfill the three basic demands in party building, the new party constitution lays down a whole series of regulations in the chapters on party members, party cadres, the party's organizational system, the party's grassroots organizations and the party's discipline.

The five "suitings" mentioned above show that the reason why the new party constitution is good is because it fully embodies a high degree of integration of Marxism-Leninism with the practice of the Chinese revolution, and a high degree of integration of Marxist-Leninist doctrine on the vanguard force of the proletarian with the practice of party building. The entire contents of the constitution's 10 chapters and 50 articles are closely linked to our target of endeavor, to the destiny of the state and people, and to the tasks of revival and reform facing us. Engels said that the value of the resolutions of a party congress depends on their scientific nature. The five "suitings" we have spoken of as properties of the new party constitution are precisely the outstanding hallmarks of the scientific nature of this party constitution.

Engels was one of the writers of the "Communist Manifesto." Throughout his life, he took part in revising, examining and approving many party constitutions and programs. In this respect, he gave some very pithy expositions. He once held the viewpoint that the history of a party is the best exposition on the party's constitution. In our previous passages, we evaluated the party constitution approved by the 12th party congress from the angle of its scientific nature. Now we are going to use this viewpoint of Engels' and proceed from the evolution of the party's history and of its previous constitutions to look into the question of whether the 12th congress' constitution is one of the best party constitutions since the founding of the CPC. During the 61 years since the founding of the CPC, it has formulated 12 party programs and constitutions (all are party constitutions, except the one approved by the first party congress which was called the "Program of the CPC"). In the 24 years from the founding of the party to the time before the seventh party congress was held, six party programs and constitutions were formulated with the direct assistance and guidance of the Comintern. This was a result of the international and domestic political conditions at that time. The constitution of the seventh party congress was the first party constitution that was independently formulated by our party after the dissolution of the Comintern. It was an exercise in integrating Marxism-Leninism with China's revolutionary practice and was a party constitution that facilitated the prosperity and development of the party and guided the revolution in vigorously developing until nationwide victory was achieved. The constitution of the eighth party congress was the first party constitution that was formulated after we seized state power. It inherited the strong points of the seventh congress' constitution and put forward new requirements for the party in order to make sure its position as a party in power. What is especially valuable was that the report on the revision of the party constitution given at the eighth congress fully expounded on the question related to the personality cult. The eighth congress' constitution was a good one. It was a pity that some of the regulations of this constitution were not carried out. The constitutions of the 9th and 10th party congresses reflected our party's mistakes during the "Great Cultural Revolution." The 11th congress' constitution was formulated not long after the smashing of the "gang of four." As the party was not sufficiently mentally prepared for the overall elimination of the "leftist" mistakes, this party constitution was not free from the guidance of the "leftist" ideology, though it had played some positive roles. It was precisely through drawing on both the positive and negative experiences of the previous party constitutions and through making further developments and improvements on the basis of the 7th and 8th congresses' constitutions that the constitution of the 12th congress was formulated through 3 years of collecting the wisdom of the whole party. Compared with all the previous party constitutions, the 12th party congress' constitution deserves to be regarded as being the best one since the founding of the CPC.

A recent report reflects the idea of some people that regarding the 12th congress' constitution as the "best party constitution since the founding of the CPC" will lead to negating the history and give rise to difficulties in evaluating the party constitution of the 13th and 14th party congresses. This idea is wrong. By regarding the 12th party congress' constitution as the best one, we mean that it inherits the previous constitutions and facilitates further development. Since it inherits the previous ones, it certainly does not negate the past nor the party's history. On the contrary, it scientifically confirms the history of the party. Since it facilitates future development, it has not yet been 100 percent perfect and should be tested in practice. If it is found that some of the stipulations of this constitution are not suitable or need additions, the 13th and 14th party congresses must and can revise it, add something to it and develop it in order to improve it. These comrades' apprehension for negating the party's history precisely proves that they are not familiar with the party's history and their fear of a harmful influence on precisely evaluating the future shows that they do not really understand our infinitely bright future.

II. A Good Party Constitution Is Formulated To Be Implemented. Therefore, We Must Act in Accordance With the New Party Constitution

"A step of actual action is more important than a dozen programs." ("Selected Works of Marx and Engels," Vol 3, p 3) This well-known saying by Marx tells us that we should not pay attention only to the formulation of the program but fail to practice it. It is very relevant to use these words of Marx to explain the importance of implementing the new party constitution. Since the founding of the CPC, 12 party constitutions have been formulated. None of the victories of our revolution could have been achieved if our party had not formulated and implemented its correct constitutions.

Since its promulgation, the new party constitution has been unanimously well received, both at home and abroad. However, there are some people who have expressed their worries that some of the stipulations in the constitution cannot possibly be carried out. These worries are not completely groundless. Quite a few of the correct stipulations in the eighth party congress' constitution have not been satisfactorily carried out and soon after the congress there emerged the movement of fighting against rightist deviation and then the 10 years of civil disorder caused by the "Great Cultural Revolution." Should we allow, then, people's worries to continuously exist? No, we should not. We have to do some work in order to establish in people's minds confidence in the unquestionable implementation of the 12th party congress' constitution. We should tell people that the implementation of the 8th congress' constitution was hindered because of certain historical conditions. These historical conditions were: 1) dogmatism and personality cult seriously fettered the party's ideology; 2) the "leftist" tendency seriously existed in our party; 3) the inner-party political life, especially the political life of the high-level leading stratum, was abnormal and democratic centralism was undermined; and 4) though the shift of the emphasis of the party's work had been put forward, it could not have been carried out because of the "leftist" mistakes in the theory and practice related to the problem of class struggle. Now all these problems have been sorted out and resolved. First, ideologically speaking, we have broken away from the longstanding serious fetters of dogmatism and personality cult and have reestablished the ideological line of Marxism-Leninism. Second, we have already sorted out and eliminated in an overall manner the "leftist" mistakes arising during and before the "Great Cultural Revolution." Third, inner-party democratic life has already embarked on a route of normal development. In this respect, the CPC Central Committee has taken the lead in setting an example. Fourth, we have already carried out a systematic criticism of and eliminated the erroneous theory of "regarding class struggle as the key link" and "carrying on the revolution under the proletarian dictatorship" that was put forward during the "Great Cultural Revolution."

The emphasis of the party's work has already been shifted on socialist modernization. The new party constitution and all other important documents of the 12th party congress were formulated by the party after profoundly summing up its historical experience, comprehensively analyzing the actual conditions and evaluating all the favorable and unfavorable conditions. Our full confidence in the implementation of the new party constitution is scientifically based. In my opinion, if we clearly explain to these comrades the above-mentioned reasons, they will be confident rather than worried about the implementation of the new party constitution.

As for a few others, they have confidence neither in the implementation of the new party constitution nor in any of our causes and communism. Often these people cannot be convinced by mere reasoning. We should allow them to watch for 1 year or several years and then let them use facts to correct their mistakes in understanding by themselves. However, this only applies to the people outside the party. Our party members are not allowed to spread any erroneous ideas that may injure the serious nature of the new party constitution. Nor are any of our party members allowed to refuse to implement the party constitution on the excuse of lacking confidence. This is the discipline of the party.

The implementation of the new party constitution begins on the day when it was approved, that is, 6 September 1982. This is effective on a large scale for every party organization and member. It cannot be delayed until confidence is established or until the party rectification is carried out. Our publicizing and implementing of the new party constitution is aimed at laying a foundation for the party rectification next year. We should first carry out education and then examine the results. At a later time after education we will evaluate whether a party member is qualified or unqualified and criticize him for his shortcomings, and thus we will be able to make them gladly accept criticism and evaluation. When we were in Yanan, we rectified the party work style first and then held a party congress. After the party rectification, we unified the thoughts of the whole party and formulated a correct line. As a result, the seventh congress became a congress of unity and victory. This time, we held the 12th party congress first and then began to carry out party rectification. Our party is such a big party that in order to satisfactorily carry out party rectification, we have to spend some time in publicizing and educating people on the party constitution after the congress was held before we carry out an overall party rectification. We must very carefully do all the preparatory work and must pay extremely close attention to this work. It is wrong to think that this work can be delayed until next year when the party rectification has begun and thus slacken our efforts at present. Of course, during and after party rectification, we should continue to study and publicize the new party constitution. We must clearly explain this to all the comrades of party committees at all levels and to comrades of the propaganda, organization and discipline inspection departments of these committees.

III. In Order To Implement the New Party Constitution, We Should First Grasp Education

In order to implement the new party constitution, we should conscientiously pay attention to educating our party members. In the document concerning the strengthening of education among party members, a very comprehensive stipulation has been made on the requirements of educating party members in the party constitution. The problem now is to satisfactorily carry out this stipulation.

Our party has more than 39 million members who are organized into more than 2 million basic party branches. To carefully, vigorously and soundly organize party members to study and implement the new party constitution is a very arduous task.

We all know that our ideological education and our work of education among the party members is still a weak sector. In other words, we have a lot of outstanding work in this field. It is precisely for this reason that we have to make great efforts to lay a foundation for satisfactorily doing this work. Otherwise some party members will remain ignorant of the stipulations of the new party constitution a few months, or even 1/2 or 1 year after the new party constitution came into force. As a result the instances of violating the party constitution will frequently occur and even become a common practice. This will actually aggravate some people's doubt about the possibility in carrying out the new party constitution.

The joint investigation report on the situation in the education among party members in 19 provinces, municipalities and regions that was made by the organization and propaganda departments of the CPC Central Committee in June and July of this year has raised a question that calls for deep thought: Why have our party members failed to play the same great role that they did at the initial period after the founding of the PRC, since the proportion of party members in the national population now is 1 to 25, which is 4 times the 1 to 100 proportion of that period? In his report to the 12th party congress, Comrade Yaobang answered this question. He said that this was because we have as yet failed to completely eliminate the pernicious influence of the 10 years of civil disorder, because under the new conditions the corrosive influence of the various kinds of ideology of the exploiting classes have aggravated the situation and because the problem still exists of impurity in ideology, work style and organization in our party. The document on strengthening education among party members points out that the actual reflection of this problem tells us that in order to create an overall new situation in our socialist modernization, we should first create a new situation in our party building and in educating our party members.

In this article, we are going to recommend a good experience of satisfactorily carrying out education among party members. This is the experience of the Hunan Changling oil refinery in developing the education movement of "becoming qualified party members." Through careful investigation, the party committee of this factory has learned of the problems among the ranks of party members there. How should these problems be solved? After repeated analysis, they found through repeated discussions an idea that made a breakthrough. This idea is that they should put an end to the previous practice of paying attention only to the people at both ends and neglecting education among those people who are in the intermediate state, and instead, they should pay attention to educating those party members who are in the intermediate state and who form the majority of the party members. They organized party members to study the documents about party building and systematically expound for them on the basic knowledge about the party. Then every party member compared what he had studied with his own behavior and found what requirements he had satisfied and what requirements he had failed to satisfy, and then fixed a goal for him to make further efforts to achieve. During the process of study and comparison, the cadres of the party committee and branches engaged in heart-to-heart talks with the party members and consciously helped those whose work performance, work style and thoughts were in an intermediate state to catch up with the advanced. Then they carried out the evaluation and comparison movement of "becoming qualified party members." After this educational activity, 1,000 of the 1,100 party members who were in an intermediate state in the factory remarkably raised their level of awareness and 300 of them caught up with the advanced party members. The change in the intermediate party members greatly shocked the originally backward party members. The old "isolation of the advanced" has already been put to an end and the practice of "vying with one another to become advanced" has greatly developed.

This factory has, furthermore, extended the movement of "becoming qualified party members" and turned it into an education movement of "becoming four qualified," that is, "becoming qualified cadres," "becoming qualified CYL members" and "becoming qualified workers." The change in party work style has brought a change in the general mood in the factory and the erroneous idea of "looking for money in everything" has gradually lost its market.

To be effective, education among the party members should be relevant and should be carried out in the manner of being particular about methods. There is still a great deal of the remnant influence of "leftism" in our methods of ideological and political work. In one of his speeches, Comrade Yaobang pointed out that in exposing, criticizing and investigating, many localities still adopt the old methods of the "Great Cultural Revolution." Are there now any old fetters and conventions of old ideology in the methods of some of our people in considering problems, inspecting people and doing ideological work? I think there are. For example, some areas are still using the "leftist" methods of indiscriminately carrying out criticism in an unfair and exaggerated manner. Of course, we must oppose the liberalist practice of keeping on good terms with everybody and maintaining peace at the expense of principle. The combat effectiveness of ideological and political work lies in its relevance, but maintaining its relevance is aimed at effectively stirring up rather than injuring the initiative of our party members. In carrying out education among party members in some localities, there has emerged a practice of calling some people party members of the "Great Cultural Revolution." This depressed the comrades who joined the party during the "Great Cultural Revolution" and hurt their feelings. The party members who joined our party during the "Great Cultural Revolution" constitute 40 percent of our party's total membership.

Indeed, there are some of them who were abruptly admitted into the party, but we should not indiscriminately say that none of them is qualified or indiscriminately call every one of them a rebel. There are indeed among them many good party members. Of course, there are also some who have committed mistakes, some even serious ones. However, these mistakes were committed under the historical conditions at that time. If only they are not the "three kinds of people," we should not hold them individually responsible for these mistakes. These comrades should be helped and educated with meticulous care, both in the educational activities of studying the new party constitution now and in the party rectification next year. Thus, we will make them feel the warmth of the party organizations' concern and become more close to the party organizations. As for those who joined the party before the "Great Cultural Revolution," during the educational activities of studying the new party constitution, we should tell them that the longer one has been educated by the party, the better one should take the lead in implementing the new party constitution. We should make them understand that "qualified party members" cannot always remain unchanged and that a qualified party member of the past may become an unqualified one under the new conditions if he fails to make efforts to study and implement the new party constitution.

IV. The Key to the Implementation of the New Party Constitution Lies in Cadres

By treating cadres as the key to the implementation of the new party constitution, we mean that party cadres, especially leading cadres at all levels, must pay attention to and be good at educating party members. Moreover, they should set examples in taking the lead in implementing the new party constitution.

Reflected in the sphere of party building, the tendency to neglect ideological and political work means neglecting education among party members.

Seeing that the 12th congress documents stress ideological and political work, the construction of socialist spiritual civilization and the education among party members, some cadres have put forward the question of "policy and education, which is more powerful"? What they mean is that since we have the policies of enlivening the economy at home and opening to the outside world and the various policies related to politics, culture, education and cadres, it is enough to rely on giving play to the force of these policies and there is no need to stress ideological and political work or education among party members. This is, of course, an incorrect view. Indeed, correct policies are powerful. However, the implementation of these policies depends on the ideological and political work publicizing and explaining these policies. This is the first point. The second is that ideological and political work shoulders an even more important task than publicizing the current policies. This task is to train people to foster communist ideology. Comrade Mao Zedong said that political work is the lifeline of all economic work. The political work he meant here is ideological and political work that is also very powerful. Both the view of regarding policies as being so powerful as to enable us to dispense with ideological and political work and that of regarding ideological and political work as being so powerful as to enable us to dispense with policies are one-sided views. We suffered quite a lot in the past because of these two one-sided views. Now we must be vigilantly on our guard against them. There has been yet another view that holds that ideological and political work is weak by nature and therefore we cannot rouse people to pay attention to it in spite of our emphasis on it. This, in fact, misunderstands ideological and political work. Comrade Zhou Enlai once sharply criticized the practice of looking down upon ideological and political work. He said: "It is never a fault of the political work itself that our political work becomes empty talk. The blame lies in our political workers' failure to carry out genuine revolutionary political work." ("Selected Works of Zhou Enlai," Vol 1, p 93) This has made a point for us that our cadres should not only pay attention to ideological and political work and to the education among our party members, but should also learn to be good at doing this work and do this work very effectively. Have we not said that we should "strike a chord in people's hearts"? When our ideological and political work and our education among party members can strike a chord in people's hearts, this work and education can be regarded as highly effective.

The report to the 12th party congress points out that the construction of socialist spiritual civilization relies on four contingents: the contingents of ideological and political workers, cultural workers, scientific workers and educational workers. The education among the party members relies mainly on the contingent of ideological and political workers. According to a rough calculation, this contingent consists of more than 3 million people. This is quite a large number, but the trouble is the insufficient political quality of this contingent. The responsible comrade of the Heilongjiang Provincial CPC Committee has gone down to investigate the situation. He has found that some party committee secretaries could speak quite a lot about the production, but could not give any clear idea about political work or education among party members. He called these comrades "directors of factories in the true sense, but false secretaries." I think that this is a reasonable criticism. Of course, a director of a factory should also do ideological and political work. It will not do for a "director in its true sense" to fail to do ideological and political work. It seems that some people have a few muddled ideas on the problem of being professionally competent. Originally, our advocation of being professionally competent meant that our cadres should be experts in their jobs. This means that those who take charge of management should be management experts, those who undertake horticulture should be expert horticulturists, those who engage in education should be education experts and those who do ideological and political work should be expert ideological and political workers.

If a secretary of a party committee or a director of the propaganda or organization department does not understand the basic theory of Marxism-Leninism-Mao Zedong Thought, is not familiar with the history of the party, does not have basic knowledge about the party, does not know how to talk with the masses, give party lectures or do ideological and political work, he cannot be regarded as being professionally competent. This should be included in future evaluation regulations. We should gradually form an idea that ideological and political work and the work of education among party members is a type of science. It is a science for running the party and the state. The millions of cadres holding posts in this work should strive to become versed in this science, and thus a large number of them will become experts in doing ideological and political work and will be able to fulfill the task assigned them in the new period.

The idea that the key to the implementation lies in cadres has another even more important implication, that is, our cadres must take the lead in observing and implementing the new party constitution. For a long time, some of our comrades had a kind of erroneous idea. It seemed to them that the ideological and political work meant only how to educate the masses and it seldom struck them that this also meant that leading cadres must first of all receive education. This had already been made very clear in Comrade

Yaobang's article entitled "On the Problem Related to Ideological and Political Work." We must correct this erroneous idea. In the northeast, there is a county called Sunwu County where a loud cry for changing the party work style was raised for a long time. But no substantial results were achieved. Later, the criticism of the masses made the comrades of the county CPC committee see their errors. The masses said that the committee spoke loudly about changing the party work style, but it was "anxious only in words and slack in deeds and it only blew the bugle but never began its march a step forward." In accordance with the masses' criticism, the county CPC committee first rectified itself. It sorted out and corrected one by one all the unhealthy practices of the leading group of the committee in the past few years, including using public funds to give banquets, embezzling public property and shifting the rural residence register of their relatives into nonrural residence registers. The committee published all this, making the news available to the whole county. The leadership disclosed without reserve to the masses all its unhealthy practices and how these practices were being corrected and requested the lower levels and the masses to supervise it. This showed a Marxist's breadth of vision and was also the best method for education. By doing this, the leadership, in fact, called on the lower levels and the masses as if saying "I have corrected my errors, now what are you going to do?" However, this time the call was no longer given in vain because it was not a call criticized by the masses for being loud in words but slack in deeds. This method is very effective. Now in Sunwu County, a new situation in party work style and the general mood of the people has already emerged.

Some comrades who have studied the ideological and political work have given the following viewpoint: The argument that can teach people is half formed by words and half formed by deeds. I think that this is a correct viewpoint and it conforms to the argument that those who educate others in Marxism must themselves receive education first. If an educator acts in a way different from what he orally advocates, he criticizes the people from the platform, but is criticized by them behind his back, what right does he have to teach the others? Here I should furthermore mention that the cadres whom we regarded as being the key to the implementation of the party constitution are not only the cadres in charge of ideological and political work, but are also all the cadres, especially the leading cadres of the party at all levels. In July this year, the Shanghai Municipal CPC Committee held a forum of fine party members. At this forum, Comrade Ding Shie, a well-known Shanghai opera actress, presented a very moving idea. She said: "First, I must treat myself as a party member and I should not treat myself as being an artist first," thus I will be able to overcome the tendency of treating myself as being special and becoming self-important. Here, she has put forth a very poignant question: Should our party members who are engaged in theoretical, educational, scientific and technical or literary and art work, or who hold leading posts, treat themselves first as being party members or first as being experts, well-known personages or leading cadres? Indeed, this question is worth the deep consideration of some of our comrades. In this activity of education in the new party constitution that is being carried out throughout our party, we should remind those comrades who do not observe the party constitution and disregard party discipline that the criteria for a "qualified party member" is the same for any party member and that our party welcomes those of its members who are brave to correct the mistakes they have committed, but will not allow any special party members, who cling to refusing to implement the party constitution, to remain in the organization of the pioneers of the proletariat.

SAFEGUARD THE CONSTITUTION'S DIGNITY, ENSURE ITS ENFORCEMENT

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 17-18, 33

[Editorial]

[Text] Being deliberated and approved by the Fifth Session of the Fifth NPC, the Constitution of the PRC has been officially promulgated. This is a great event in the Chinese people's political life. This is another great achievement in the building of a high degree of socialist democracy and a high level of socialist civilization, with things being set to rights since the 3d Plenary Session of the 11th CPC Central Committee. The new constitution has won the warm support of the people of all nationalities throughout the country. Its enforcement will inevitably guarantee the further consolidation of the political situation in China, guarantee the development of socialist democracy and the improvement of the socialist legal system, and guarantee the smooth development of our socialist modernization.

By carrying forward and developing the basic principles of the 1954 constitution and overcoming the drawbacks of the 1978 constitution, the new constitution has summed up the rich experiences of developing socialism in China over the past 30 years and more and has concentrated the will of the people of all nationalities. Both the current situations and future prospects have been taken into account in the new constitution. It is really a Chinese-style constitution that tallies with the needs of socialist modernization in the new historical period and it will remain unchanged for a long time to come. The new constitution adheres to the socialist road, the people's democratic dictatorship, the leadership of the CPC and Marxism-Leninism-Mao Zedong Thought. It is formulated with the four basic principles as the general guideline. It prescribes the general task in the new historical period and lays down principled stipulations on China's system of the people's democratic dictatorship, the socialist economic system, socialist spiritual civilization, the fundamental rights and duties of citizens, the state structure, the unifying of the nation and the unity of nationalities and the independent foreign policy. For example, the restoration in the new constitution of the formulation that China is a socialist state under the people's democratic dictatorship is not a simple restoration of the formulation and its contents in the 1954 constitution; instead, it accurately states the present condition of the classes in China and the broad basis of our political power. It truly reflects the fact that a socialist economic system has been established in our country and that it is growing ever stronger, affirms socialist public ownership of the means of production as the basis of our socialist economic system and the individual economy of the working people in urban and rural areas as a complement to the socialist public economy, and also stipulates that the planned economy should play a dominant role while the supplementary role of regulation by market mechanism should also be brought into play. It restores the principle of the 1954 constitution that all citizens are equal before the law and stipulates citizens' fundamental freedoms and rights as well as their basic duties to the state and society. All contents and stipulations in the new constitution reflect the achievements in the work of setting things to rights since the 3d Plenary Session of the 11th CPC Central Committee, represent the fundamental interests of the people and embody the uniformity of the party's decisions and the people's will. Thus, they are in conformity with our country's conditions and people's wishes. The new constitution is a good statute for administering our country in the new period. It is the state's fundamental law, which has the highest legal authority, and functions as the foundation for general legislation. Thus, its legal authority is higher than other laws. As Comrade Ye Jianying pointed out in his speech at the closing meeting of the NPC session, the promulgation and enforcement of the new constitution will certainly push the building of our socialist democracy and legal system to a new phase and will certainly push our modernization construction to a new stage.

It was through more than 2 years of work under the guidance of the party's correct line and through the nationwide discussion which pooled the wisdom of the masses that the new constitution was formulated in a time when our country was experiencing a great historical change. The course of formulating the new constitution was in fact a course in which the people of all nationalities fully exercised their democratic rights. Ours is a socialist state under the people's democratic dictatorship, led by the working class and based on the alliance of workers and peasants. The workers, peasants and intellectuals constitute the three basic social forces and are the masters of the country. All power in our country belongs to the people. The organs through which the people exercise state power are the NPC and the local people's congresses at different levels. The people administer state affairs and manage economic, cultural and social affairs through various channels and in various ways in accordance with the law. The people not only have the right to participate in the discussion and formulation of the nation's fundamental law, but also have the right to supervise its enforcement. This is a fundamental sign of socialist democracy. Our socialist democracy is enjoyed by most people and is characterized by the people being the masters of the country. Thus, it is a high degree of democracy. The bourgeois democracy can never compare with it.

Once being promulgated, the new constitution came into effect; it now has a universal binding force. The new constitution stipulated: "The people of all nationalities, all state organs, the armed forces, all political parties and public organizations and all enterprises and undertakings in the country must take the constitution as the basic norm of conduct, and they have the duty to uphold the dignity of the constitution and ensure its implementation." This is to say, all political parties and organizations, all departments and units, all groups and individuals should resolutely act in accordance with the constitution and no person is allowed to violate it. The NPC and its Standing Committee have the function and power to supervise the enforcement of the constitution; local people's congresses at all levels have also the function and power to guarantee that the constitution is abided by and implemented in their respective administrative areas. It should be noted that there are now many favorable conditions for the enforcement of the new constitution. Our party has successfully completed its task of setting the guiding ideology to rights. Developing socialist democracy and perfecting the socialist legal system are our party's unswerving principles. After drawing a deep lesson from the 10 years of domestic turmoil, the party and the people have all realized the great importance of the constitution and other laws in maintaining our nation's unity and stability and in the development of our cause. Through the propaganda work and education in the socialist legal system in recent years, the vast number of cadres and masses have been strengthening their awareness of the legal system. If all our 1 billion people have the idea and habit of abiding by and safeguarding the constitution, this will constitute a huge strength. All kinds of obstructions will inevitably be overpowered by this strength. We should have full confidence that the new constitution can be complied with and implemented well.

To effectively guarantee the implementation of the new constitution, we must do a good job in three areas, namely, making it known to everybody, abiding by it and safeguarding it. To make it known to everybody, we must do a great deal of propaganda and education work in a planned, methodical and systematic way so as to let the masses understand the constitution. Party committees at all levels should take the propaganda and education work in this field as a matter of importance. In general, the people in our country, including cadres at all levels, are less aware of laws and legal knowledge. This is particularly the case for the vast number of youths. Now we should strengthen education in the legal system through the study and publicity of the new constitution. Leading cadres should take the lead in the study and should personally explain the constitution to other cadres and the masses. It is necessary, through all kinds of media and means of propaganda, to publicize the principled spirit and specific stipulations of the new constitution and to make them known to every household so that the new constitution can strike root in the hearts of the people. Through propaganda and education, we should improve cadres' and the masses' sense of responsibility in being masters and strengthen their awareness of the socialist legal system so that cadres and the masses can all consciously comply with the new constitution and guide their actions with it, thus being citizens who have lofty ideals, moral integrity, education and a sense of discipline.

Abiding by the constitution is the sacred duty of every citizen. Party organizations, leading cadres and all party members must abide by the new constitution and be the models of implementing the new constitution. A qualified party member or cadre must first be a qualified citizen or a model citizen. Our party is the party in power. It not only leads the people in formulating the constitution, but also leads the people in putting the constitution into effect. Only when the party requires its organizations at all levels and all its members, and particularly leading cadres, to set examples with their own conduct and play an exemplary role in complying with the new constitution can other social organizations and the masses be required to follow suit in complying with the new constitution. Cadres in our party and state, no matter in what positions they are situated, should never regard themselves as special citizens who need not confine their conduct within the limits of the constitution and laws, still less can they utilize their functions and powers to seek private interests for themselves or to gain profit for themselves by bending the law. The whole party must follow the stipulation in the new party constitution that its activities must be carried out within the limits of the constitution and laws. People's governments and judicial departments at all levels must act strictly according to law and ensure the enforcement of the new constitution.

By safeguarding the constitution we mean that we must safeguard its dignity and dare to struggle against all illegal and criminal activities. We should cultivate a prevailing custom that people always dare to protect good people and good things and dare to oppose evil people and evil things. We should create a strong public opinion that abiding by discipline and law is the most glorious thing while violating law and committing crimes is the most ignominious thing. We should encourage the revolutionary spirit of not hesitating to dedicate one's life to safeguarding the dignity of the constitution. All fronts should energetically commend and support good people and good deeds that consciously comply with the constitution, guard state secrets, cherish public property, abide by labor discipline and public order, respect social morality and resolutely struggle against evil people and evil things. People who disregard law and discipline and sabotage the socialist legal system should be exposed and punished. In particular, we must expose and crack down on the hostile forces that undermine the socialist cause. All actions in violation of the constitution and other laws must be dealt with according to state law. No lawbreakers should be allowed to escape the net of justice.

Every one of us must understand that the people are the masters of our country and society and that the constitution is the fundamental norm for the people to exercise their duty as the masters. According to the constitution, no persons in our country can be free from being supervised by other people and no person can give up his duty of supervising others. This represents both the right and the duty of being a master. Every one of us should fully exercise this right and faithfully carry out this duty, being both a model in abiding by law and a brave fighter in defending law, so that we can certainly ensure the thorough implementation of the constitution.

A PLAN TO LAUNCH THE NATIONAL ECONOMY ON A PATH OF HEALTHY DEVELOPMENT--ON THE CHARACTERISTICS OF THE SIXTH 5-YEAR PLAN

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 19-24

[Article by Fang Weizhong [2075 4850 0022]; passages within slantlines published in boldface]

[Text] The Sixth 5-Year Plan for China's economic and social development has been examined and approved by the Fifth Session of the Fifth NPC. It is thus the second quite well-conceived 5-year plan following the First 5-Year Plan, a plan which is fairly comprehensive in content and relatively appropriate in target terms.

Since the carrying out of our economic construction in a planned way in 1953, China has executed five 5-year plans altogether. Except the First 5-Year Plan which had a fairly comprehensive plan and was successfully fulfilled, the remaining four 5-year plans had merely suggested quotas or plan outlines and moreover, due to the impact of the "Great Leap Forward" movement or damage during the decade of domestic turmoil of the "Great Cultural Revolution," coupled with the influence of "leftist" thinking, some of the plans characterized by impetuosity and rashness and excessively high targets failed to be smoothly implemented and even brought about serious setbacks to the development of the national economy. The Sixth 5-Year Plan has appeared before the people with a brandnew look. It is characterized not only by its comprehensive contents but still more by its unique style, that is, it has conscientiously summed up the positive and negative experience of the prolonged economic construction in the past, embodied the strategic plan for the economic development in the coming 20 years charted by the 12th party congress and the new principle for developing the national economy defined by the Fourth Session of the Fifth NPC and taken a new path of socialist modernization.

The report on the Sixth 5-Year Plan delivered by Premier Zhao Ziyang at the Fifth Session of the Fifth NPC profoundly expounds the basic tasks of the Sixth 5-Year Plan, sums up the implementation of the Sixth 5-Year Plan in the first 2 years and formulates the key measures for the overall fulfillment of the Sixth 5-Year Plan. This report indicates that the plan is a well-conceived and worthwhile one based on actual conditions under which production targets will be carried out in an orderly manner and step by step and that the measures adopted to fulfill this plan are geared to actual circumstances and are firm and effective. This report substantiates and enriches some correct principles formulated in the past and significantly subjectivizes them, thus bringing the people of the whole country tremendous confidence and power to fulfill this plan.

Such being the case, in what aspects do the characteristics of the Sixth 5-Year Plan find expression?

/First, decide the plan targets in accordance with the existing conditions rather than by wishful thinking./

In the previous five 5-year plans, some targets were decided by wishful thinking, not in accordance with existing conditions. The gross error of the "10-year program" formulated in 1978 was that the tasks of the plan were incorrectly defined. Just when there were serious disproportions in the national economy and life was extremely difficult for the people due to damage during the decade of the "Great Cultural Revolution," readjusting the economy and allowing the people to rest and build strength should have been decided as the principal tasks of the plan but at that time, ignoring this basic situation and proceeding from wishful thinking, some people demanded that a new leap forward should be organized. This resulted adversely in worsened imbalances in the economy and the aggravated difficulties in economic life, and alterations of the original plans had to be made.

The reformulation of the Sixth 5-Year Plan started with a serious analysis of the economic situation. The CPC Central Committee and the State Council have repeatedly pointed out that thanks to the endeavors to bring order out of chaos since the 3d Plenary Session of the 11th CPC Central Committee and the economic readjustment carried out in 1979, great achievements have been scored in various aspects. However, longstanding accumulated problems cannot be completely solved in a brief space of time. Since no fundamental turn for the better has been achieved in the state's financial and economic situation, the task of the Sixth 5-Year Plan is therefore to continue to implement the policy of readjustment, restructuring, reorganization and upgrading, make further efforts to seek solutions to the various problems left over from the past which hamper economic growth, win decisive victory in achieving a fundamental turn for the better in the financial and economic situation and lay a better foundation or create more favorable conditions for economic and social development in the Seventh 5-Year Plan. This formulation of basic tasks is entirely in conformity with the present economic conditions and with the objective law of economic development.

By mentioning that the longstanding accumulated problems have not been completely solved and no fundamental turn for the better has been achieved in the financial and economic situation, we mainly refer to the following facts: No fundamental turn for the better has been achieved in the fairly irrational enterprise organizational structure and in the chaotic situation in operation and management; there exist a variety of problems in industrial structures and product mix; economic results are still very poor in such fields as production, construction and circulation and the waste is quite amazing. All this has resulted in the fact that under a situation in which the state has greatly increased its expenditure on the improvement of the well-being of the people, state financial revenue has increased slowly or even decreased due to poor economic results, which has made it hard to strike a balance between state financial revenue and expenditure. Therefore, in order to achieve a fundamental turn for the better in the financial and economic situation, that is, to achieve a balance between financial revenue and expenditure on condition of ensuring a gradual increase in the funds for economic and social development and a gradual improvement in the people's living standards, we must conscientiously carry out the overall reorganization of existing enterprises, gradually rationalize the industrial structure, the product mix and the enterprise organizational structure, and continue to reform the economic administrative system in an orderly manner so as to achieve a marked improvement in the economic results of such fields as production, construction and circulation. All these tasks cannot be accomplished altogether during the Sixth 5-Year Plan period but various measures should be adopted to make some significant headway in these fields and to win a decisive victory in achieving a fundamental turn for the better in the financial and economic situation. Practice has proved that doing a good job in the readjustment and reorganization of existing enterprises and in the restructuring of the economic administrative system, eradicating the various malpractices existing in the economy, harmonizing proportionate relations and putting the relationships of the various quarters and sides concerned in proper order can yield good results and bring about high speed. This is the best preparation we should make for the economic development during and after the Seventh 5-Year Plan period. If we do not concentrate our efforts on this matter and the features of operations and management remain unchanged, to accelerate the development of the economy is fundamentally out of the question. On the contrary, the financial and economic difficulties will go further from bad to worse.

Of course, to lay a sound foundation and create conditions for economic development during and after the Seventh 5-Year Plan period, a lot of work should be done in material conditions, science and technology and in the training of qualified personnel. If we fail to pay close attention to the work in these fields, it will also be impossible to speed up the development of the economy.

Continuing the implementation of the policy of readjustment, restructuring, reorganization and upgrading is a matter of overall importance which has a bearing on whether or not we can, in the 1980's, lay a sound foundation for the economic rejuvenation in the 1990's. The Sixth 5-Year Plan, with the continued implementation of this policy as its basic task, has thus seized the principal contradiction and the main tasks. In this matter we must preserve a high level of political consciousness and strictness and carry it out with great attention and in a down-to-earth manner.

/Second, with the improvement of economic results as the center, strive for a steady increase in the economy./

The biggest disaster we suffered in the prolonged economic construction in the past was caused by the policy of concentrating on the growth rate of output and output value and on high targets at the expense of economic results. We suffered in 1956; we suffered a great loss during 1958 and 1960; and we again suffered quite a few disasters over a long period of time after 1970. In order to realize unrealistic targets, we had to work out a high rate of development. Excessively high targets would invariably give rise to all sorts of problems and result in more haste, less speed. They can seriously dampen the initiative of the masses of the people rather than arouse and protect the enthusiasm of the masses of the people for labor.

In the course of drawing up the Sixth 5-Year Plan, the CPC Central Committee and the State Council advanced an important principle, that is, we should not seek high goals in economic affairs any longer, and pointed out that the growth rate for the Sixth 5-Year Plan should be a growth rate devoid of exaggeration but with staying power; an active growth rate which allows some leeway; and a growth rate which has as its prerequisite the attainment of better economic results rather than vice versa.

The growth rate devoid of exaggeration we have mentioned here demands that targets should be practical and reliable, product quality should be up to standard, product varieties and designs should meet the needs of society, the consumption of materials per unit-product should be substantially reduced and that we must not indulge in exaggeration and not concentrate on speed at the expense of product quality, material consumption and product marketability. Such practices are bound to lead to the emergence of the phenomenon whereby "in industry, good news is announced while in commerce, bad news; in warehouses, there is overstocking while in finance, there are only nominal increases" and must not strive for undeserved reputation, a practice which invites real harm.

The so-called active plan which allows some leeway demands that the various departments and localities should make energetic efforts to tap potential, devote a lot of energy and effort to improving quality and reducing consumption, and increase production while practicing economy rather than accept the status quo and drift along. Once a plan target is worked out, we must guarantee its fulfillment and strive to exceed it in its implementation. A growth rate devoid of exaggeration which allows some leeway means a growth rate with staying power. So long as quality is really improved and consumption reduced, a benign cycle will take shape and a steady increase will be achieved in industrial production.

The "Sixth 5-Year Plan" stipulates that industrial and agricultural production will increase at an average annual rate of 4 percent and that efforts should be made to bring the figure up to 5 percent in the course of carrying out the plan. This is a good embodiment of the above-mentioned principle. It is a growth rate which lays emphasis on better economic results and strives for higher efficiency rather than a growth rate which blindly strives for increases in output and output value at the expense of economic results. Considerable efforts will have to be made to attain this plan and a marked improvement in economic and technical targets is a must in this respect. For example, during the Sixth 5-Year Plan the average annual growth rate of energy will be 1.4 percent and the growth rate of industry will be 4 or 5 percent. This demands that the energy consumption rate in industry must reach 2.6 to 3.5 percent a year. This plan gives full consideration to the various possibilities and can be attained so long as efforts are exerted. The results of the carrying out of the 1980 and 1981 plans surpassed their scheduled requirements. This has proved that this plan is appropriate.

The 12th party congress demands that the whole of economic work should be shifted to the path with the attainment of better economic results as its center. To meet this demand is not an easy job and a lot of painstaking and meticulous work should be done in this respect. However, we must act as required by the party Central Committee and first bring about a serious change in our guiding ideology and set strict demands on ourselves in our practical work.

/Third, exercise strict control over the volume of total investment in fixed assets, concentrate funds, hasten the completion of key development projects and actively promote the technical transformation of existing enterprises./

Historical experience has indicated that high targets invariably cause overextension of the scale of our capital construction. Blindly undertaking new construction stalls and going in for starting more new projects regardless of building costs and construction cycles is the most serious malpractice which has existed for a long time in our capital construction. The several major setbacks which have occurred in our economic construction since the founding of the PRC are all closely related, economically, with the extension of the scale of our capital construction. Capital construction projects sprang up all over the country in 1958 and we repeated this mistake by rushing without forethought into a lot of capital construction several times after 197C.

Overextended and excessive capital construction and too many construction projects have brought about dire consequences in two aspects: On the one hand, many construction projects were started in haste due to lack of proper prior preparations and all kinds of problems emerged in the process of construction; as a result, construction projects had to be carried out in an intermittent manner, with their designs being revised while construction was under way. Many production projects had to stop working awaiting the supply of raw materials from lack of material and equipment supply. As a result, huge amounts of funds and materials were overstocked in the process of capital construction and failed to come into play as soon as possible. On the other hand, many funds including the renewal and transformation funds of enterprises were diverted to capital construction. As a result, the equipment of large numbers of enterprises failed to be updated and their technology failed to be transformed, their equipment became worn out and useless and labor productivity was decreasing day by day. This state of affairs has brought about a vicious circle: The more new construction projects were undertaken, the more serious the damage to old construction projects would be. The more often people failed to speed up the production of old enterprises, the more anxiously they wanted to extend the scale of production and in addition, the larger the scale of production, the poorer the returns from investment would be. Cutting flesh to cure a boil can only make both sides suffer. The overextension of the scale of capital construction caused disproportions in the national economy, interrupted the balances of the national economy, interfered with the smooth progress of existing production and affected the commodity supply on the market. While it was proved hard to sustain any longer, some readjustments had to be carried out and large batches of projects had to be suspended or discontinued. Capital construction has suffered grievous losses from this kind of large-scale construction and discontinuation.

While drawing up the Sixth 5-Year Plan, the CPC Central Committee and the State Council have time and again stressed that we should not repeat this mistake and demanded that we should resolutely curtail the total volume of investment in capital construction so as to make it correspond with national capabilities and at the same time, the funds for the renewal and transformation of enterprises should be increased. The total volume of investment in the whole fixed assets should be put under the unified management of the State Planning Commission, that is to say, we must ensure investment in key energy and transport projects on the one hand and in technical transformation of existing enterprises on the other and resolutely slash ill-considered projects launched so as to increase the capacity of the ordinary processing industries. In light of this spirit and in accordance with the plan, the total investment in capital construction throughout the country in the 5 years will be 230 billion yuan of which the state-budgeted investment will be 118.2 billion yuan, constituting 20 percent of the total state expenditure. This is very much lower than the 35 percent in the "Fifth 5-Year Plan" period. Altogether 890 large and medium-sized projects will be undertaken in these 5 years--far fewer than during the previous 5-year period. Funds earmarked for updating equipment in the existing enterprises and for their technical transformation are more than during the previous 5-year period, amounting to 130 billion yuan in the 5 years and averaging 26 billion yuan a year. The proportion of such funds in the total investment in fixed assets is increased from the previous about 20 percent to 36 percent in the Sixth 5-Year Plan.

Of the total volume of investment in capital construction in the 5 years, the investment in energy and transport projects will be 88.4 billion yuan, accounting for 38.5 percent. With the increased investment in these aspects, the capacity of construction of coal, electricity, petroleum, railway and water transport will also increase. For example, the total production capacity of China's coal industry in the 5 years will be 220 million tons and in addition to a production capacity of 80 million tons to be made available before the end of 1985, the production capacity to be carried forward into the Seventh 5-Year Plan will be 140 million tons. This figure is almost 70 percent higher than the production capacity of 83 million tons which was achieved by the end of 1980 to be carried forward into the Sixth 5-Year Plan. The total electric power in the 5 years will be 36.6 million kw. Of this figure, 12.9 million kw will be available before the end of 1985, while work on the remaining 23.7 million kw will continue in the "Seventh 5-Year Plan" period. This figure is bigger than the electric power capacity of 184 million kw which was closed in the end of 1980 and to be continued in the "Sixth 5-Year Plan." The exploration of oil in the western regions of the country and the exploration of offshore oil will be speeded up. In communications and transport, on the one hand, the technical transformation of some of the present railways must be accelerated and on the other, several new major trunk railways for transporting coal and additional deepwater berths of coastal harbors will be constructed. Completion of these tasks will provide the development of the national economy with better energy and transport conditions.

Seen from China's financial and material resources, the total volume of investment of the "Sixth 5-Year Plan" is by no means small, and in particular quite a few medium and large-sized projects have been scheduled. Putting these investments to effective control and use can play a great role. We must learn from the lessons in the past, concentrate strength on doing a good job in the construction of the projects within the plan, strive to shorten production cycle, cut down building costs and thoroughly put an end to the phenomenon in the past whereby construction was undertaken in so blind and unplanned way that "making an investment became a bottomless pit and construction projects were carried out in a marathon manner."

Renewal and transformation funds must also be put to effective control and use and be really used in updating old equipment and adopting new technologies and new techniques rather than using them in expanding the production capacity of ordinary industries with old techniques. In order to enhance the existing enterprises' capacity to renovate and transform, the State Council has decided that in light of the possibilities of the state financial strength, the depreciation rate of the equipment of enterprises should be steadily increased.

Whether or not the scale of investment in fixed assets during the "Sixth 5-Year Plan" period can be brought to a rational level and whether or not key development projects and major technical transformation can be ensured as required have a bearing on the success and failure of the "Sixth 5-Year Plan" and on whether or not the national economy can increase in a sustained way on the basis of steady growth. Therefore, we must pay strict attention to management in this aspect and not slacken our vigilance or treat it casually. Once the situation is improving, on no account must we "have a relapse."

/Fourth, put science and technology and the training of qualified personnel in an important strategic position./

In the previous several 5-year plans, no proper importance was ever attached to the development of science and technology and the training of qualified personnel. The expansion of production depended mainly on extending the scale of production and on undertaking capital construction rather than depending mainly on technological advance; work in science and technology was not sufficiently combined with economic construction. Educational undertakings made slow progress and the level of the education the people have received and of science and technology and culture was remarkably low. This resulted in a situation in which the level of our production techniques had been in a stalemate for a long time and our work in many aspects still remained at the levels of the 1950's.

In the course of drawing up the Sixth 5-Year Plan, the CPC Central Committee and the State Council demanded that science and technology and the training of qualified personnel should be placed in a strategic position. The modernization of science and technology is a key link in our four modernizations. If we do not lay stress on the study of science and technology or promote technological progress, we cannot possibly realize the task of quadrupling the annual gross value of industrial and agricultural production by the turn of this century or narrow the gap in science and technology between ourselves and the economically developed countries. Moreover, the development of science and technology depends, in the final analysis, on training qualified personnel and on fully organizing the present scientific and technical force and bringing their initiative into full play. Therefore, particular importance should be attached to educational work and to the training and rational use of qualified personnel.

The Sixth 5-Year Plan has begun to pay attention to putting the development of science and technology and education in an important position. The funds scheduled by the plan for developing education, science and technology, culture and public services will be 96.7 billion yuan, an increase of 68 percent over the 57.7 billion yuan appropriated in the Fifth 5-Year Plan. The total state expenditure during this period will be only 17 percent more than that during the "Fifth 5-Year Plan." The proportion of these funds in total state expenditure will increase from 11 percent during the "Fifth 5-Year Plan" period to 15.9 percent. A large portion of the increased financial revenue during the Sixth 5-Year Plan period will be appropriated for education and scientific research. Because the problems left over from the past are many, the funds allocated for these undertakings now are admittedly insufficient, but appropriations for these undertakings will gradually increase along with the future growth of our economy.

In science and technology, the present scientific and technical force should, under the Sixth 5-Year Plan, be rallied to take part in all planning work, in tackling key problems in the major theoretical problems raised in the course of the modernization program and in the techno-economic deliberations and prospecting and designing of major construction projects. We must create a situation in these aspects and strive for useful achievements. Along with this, we must, in light of the technical transformation of enterprises, introduce from abroad a large batch of advanced production techniques and key equipment in a planned way and enthusiastically do a good job of digestion and assimilation work.

While energetically expanding research in the natural sciences, we should also attach importance to studies in the social sciences. We should do our best to expound and solve the major theoretical and practical problems raised in the course of our socialist modernization.

In the training of qualified personnel, it is scheduled according to the plan that on the premise of improving quality, we should develop higher education and increase the number of newly admitted full-time students in institutions of higher education, continue to restructure secondary education and set up more new secondary vocational schools of different types. We should strive to make primary school education universal or almost universal by 1985 in most counties and to make junior middle school education universal in the cities and vigorously eliminate illiteracy among young and middle-aged people.

In order to raise the ideological and political level and the level of modern science and technology and production skills of the broad masses of cadres, technical personnel and workers, we will widely run various kinds of regular universities and colleges, regular schools and training courses in rotation so as to put the education of staff and workers on a regular basis in a relatively short time.

Putting science and technology and the training of qualified personnel in an important strategic position is a remarkable change in the state's guiding ideology in economic construction. We must realize the great significance of such a change and make energetic efforts to adapt ourselves to such a change, achieve genuine unity in thinking and put it into practice in real earnest.

/Fifth, combine development of the national economy with social development and pay attention to both the building of material civilization and that of spiritual civilization./

Our plan in the past was mainly a development plan of the national economy. Although it contained the content of social development, the latter was quite incomplete and furthermore the content of the building of socialist spiritual civilization was insignificant. One important reason for this state of affairs is that there existed a serious one-sidedness in our guiding thinking; that is, we excessively chased the rate of increase of production and construction at the expense of the improvement of the well-being of the people and the solution to social problems; we attached great importance to the planning of material production to the neglect of the planning of the production of man and the rational use of manpower; and we devoted much attention to the building of material civilization but underestimated the importance of the building of spiritual civilization and more and more social problems piled up as a result.

In the course of drawing up the Sixth 5-Year Plan, the CPC Central Committee and the State Council instructed that we should bring social development into line with the plan, correct the erroneous idea of underrating the importance of cultural development and ideological education and give consideration to creating fine standards of social conduct. Economic growth is indispensable to social development. Otherwise, it will become aimless and lose its social guarantee. Material civilization provides an indispensable foundation for socialist spiritual civilization which, in its turn, gives a tremendous impetus to the former and ensures its correct orientation. In all economic work, we must not only give consideration to the expansion of production but also to the building of socialist spiritual civilization, and to the bringing up of generation after generation of socialist new people. With the establishment of the socialist system, we already have the possibility to and still must develop social production in a planned way and at the same time, promote social development and build spiritual civilization in a planned way. The Sixth 5-Year Plan has changed the tendency of not attaching importance to social development planning. This is a great change and a big step forward.

The part on social development in the Sixth 5-Year Plan includes plans for population, labor employment, the income and consumption of the residents in urban and rural areas, urban and rural construction and social welfare undertakings, cultural undertakings, public health and physical culture, environmental protection and preserving good public order. At the same time, it demands that in the various economic construction undertakings, we should strengthen ideological education so that more and more staff and workers will become working people with lofty ideals, moral integrity, education and a sense of discipline, overcome all sorts of unhealthy practices, strike resolute blows at the serious criminal activities in the economic and other spheres and at other serious criminal activities and create a general improvement in public order and order in production and other work for the realization of the Sixth 5-Year Plan.

From the above-mentioned contents we can see that the Sixth 5-Year Plan is a 5-year plan which continues the implementation of the policy of readjustment, restructuring, reorganization and upgrading and launches the national economy on a path of healthy development and a 5-year plan which takes a new path of socialist modernization in light of China's existing conditions. This is the result of bringing order out of chaos since the 3d Plenary Session of the 11th CPC Central Committee and the crystallization of implementing the party's practical and realistic line. Earnest implementation of this 5-year plan will significantly raise the level of the whole of economic work, help the national economy steadily grow in the course of readjustment, help the modernization program move forward a step further and help continue to improve the people's livelihood. Provided we successfully fulfill the Sixth 5-Year Plan, we can be certain that the growth rate for the Seventh 5-Year Plan will be higher than that of the Sixth 5-Year Plan. Proceeding from this basis, the growth rate for the eighth and ninth 5-year periods is certain to be still higher. In this way, we will have the possibility of realizing the magnificent objective of quadrupling the annual gross value of industrial and agricultural production by the end of this century.

Since the 3d Plenary Session of the 11th CPC Central Committee, significant improvements have been achieved in China's planning work. The formulation of the Sixth 5-Year Plan has made a degree of progress in many aspects compared with the previous ones. However, this is only a beginning. Owing to the complexity of economic life and the restriction of the level of planning work, though earnest efforts have been made to conduct investigation and study and to achieve an overall balance in preparing the plan, there may be points needing further deliberation, which will be readjusted as required and handled properly in accordance with concrete conditions in the course of its implementation.

COMRADE SUN YEFANG'S CONTRIBUTIONS TO ECONOMIC THEORIES

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 25-30

[Article by He Jianzhang [0149 1696 4545] and Zhang Zhuoyuan [1728 0587 0337]]

[Text] Comrade Sun Yefang is a famous economist in our country. In his theoretical research activities over the past decades and particularly in the past 30 years, he based himself on Marxist basic theory and put forth major questions according to the practice of our socialist construction. He conducted deepgoing and intensive studies, boldly created new things, dared to argue, continually challenged erroneous traditional concepts, and put forward a complete system of socialist economic theory embodying his original views. Particularly noteworthy is that, based on the results of his own scientific research, he has put forward a whole series of bold and richly enlightening suggestions and ideas on the reform of China's financial and economic management systems and on the major problems encountered in the practice of China's socialist construction. Recently, although gravely ill, he has remained greatly concerned for socialist construction, and wrote an excellent article entitled "There Is a Technical and Economic Guarantee as Well as a Political Guarantee for Quadrupling in 20 Years," which dealt with the idea that it is necessary to rely mainly on technical transformation in order to quadruple total industrial and agricultural output value and consequently he was praised by leading comrades from the CPC Central Committee and the State Council.

The theoretical activities of Comrade Sun Yefang have created a good example for the broad masses of theoretical workers in overcoming difficulties and in daring to climb the peak of science. His socialist economic theory is characterized by giving prominence to economic efficiency and it is based on the law of saving time or the law of value as it is termed by him. This theory is opposed to the theory of natural economy and the theory of will but on the other hand it pays very much attention to the important significance of technical progress in developing social production, stresses the importance of the broad masses as masters of their land and advocates that enterprises should play their roles as independent economic accounting units. He began by studying the double nature of products and daringly probed into the question of reforming socialist political economic system from the simple to the complex aspects through analyzing the process of direct production, the process of circulation and the whole process of social production. The following is a brief introduction to the important significance of his economic theoretical views in the implementation of socialist modernization program in our country today.

I. Gaining the Greatest Results From the Least Spending Is the Supreme Principle in Socialist Economic Activities

In early 1960, the sphere of economics was generally subject to the influence of "leftist" ideology. Textbooks of political economy stressed the importance of class struggle with political slogans replacing economic analyses. At the same time, in actual economic life, economic law was replaced by objective will, coupled with making rash advances blindly and giving no consideration to economic efficiency, and all these resulted in serious losses and waste. But Comrade Sun Yefang rose against the tide and put forth his famous concept that the supreme principle in socialist economic activities is to gain the greatest results from the least spending. The Economic Research Institute of the Chinese Academy of Sciences, which was then under his management, followed the directives from the CPC Central Committee and organized all research personnel to compile the book "On Socialist Economy." Disregarding opposition from some people, he insisted that the book must give prominence to the importance of seeking economic efficiency. He said that the textbooks of political economics must pay attention to economy. What is economy? The answer is to gain the greatest achievements with the least spending. We must prove through analyzing the relationship of socialist production that the relation of socialist production is in a better position than capitalism to gain bigger achievements with least spending and consequently to promote the development of the social economy.

Comrade Sun Yefang time and again stressed that political economics must have a value economic category. He sharply criticized a wrong view that "'spare no expense' seems to represent boldness of spirit in carrying out socialist construction." According to his view, under the socialist system, value decision still plays a governing role in the distribution among various forms of production whether in the readjustment of labor time or in social labor. He stressed that it is necessary in a socialist economy to respect the role of the law of value so as to enable the "backward, medium and advanced enterprises constantly to engage in competition for the purpose of decreasing the average labor needed by society" and he said that this is a socialist "broad road for developing production and social prosperity."

But this demand of seeking economic efficiency in all economic activities and the theory of respecting the law of value were termed as being in opposition to putting proletarian politics in command and denying class struggle. During the "Great Cultural Revolution," this concept was even labeled as "counterrevolutionary revisionism." Since the 3d Plenary Session of the 11th CPC Central Committee, the CPC Central Committee has spared no efforts in eradicating "leftist" mistakes both in theory and practice. It demanded that we must take a new road for developing the national economy and the core of this task is to seek economic efficiency in all economic activities. Practice has proved that Comrade Sun Yefang's view of taking economic efficiency as the supreme principle in socialist economic activities is totally correct.

II. Attaching Very Great Importance to Economizing and Making Rational Use of Socialist Capital

It is an actual problem that we lack capital for our socialist modernization program. Therefore the question of economizing and making rational use of limited capital are closely related to the question of whether our construction can be carried out smoothly. As early as the 1950's, Comrade Sun Yefang was aware of the importance of economizing and making rational use of construction funds. He proved this view theoretically and put forth some practical suggestions.

In order to check the results in using the capital, he advocated the use of capital profit rate as a comprehensive norm for checking the results of business and management of enterprises and production costs, and the basis for defining prices of products. This view was put forth during the debate around 1956 on the question of whether the price of heavy industrial products should be decreased or not. He was opposed to a decrease in the price of heavy industrial products on the grounds that although the profit rate of such products was relatively high, the capital profit rate was low. He said: We made tremendous investments in our heavy industrial enterprises with the capital accumulated by the broad masses of workers and peasants throughout the country through their blood and sweat; why cannot these enterprises make profit? To judge the price of products through capital profit rate means that it is imperative to economize and rationally use socialist capital, pay attention to the efficiency of using the capital and to check capital profit rate.

It was once a commonly held wrong view to mix the profit of socialist enterprises with that of capitalist enterprises and oppose paying attention to socialist profit and checking capital profit rate; it was under such conditions that in 1963 Comrade Sun Yefang wrote a research report entitled "The Profit Norm of the Socialist Planned Economic Management System." In this report he advocated that it was imperative, according to state planning, to "define the orientation of production and the relations of coordination, strictly implement supply-production-sales contracts and observe planned prices while the amount of profit represents a comprehensive norm to show the standard of an enterprise's technical level and its business management level. The social average capital profit rate is a level that has to be reached by each enterprise; those that have exceeded this rate are advanced enterprises and those that are lagging behind this rate are backward enterprises."

During the "Great Cultural Revolution," these views of Comrade Sun Yefang were labeled by Kang Sheng, Chen Boda and the "gang of four" as "putting profit in command" and criticized. But he did not make a self-criticism. Following the downfall of the "gang of four," he wrote the first important thesis under the title of "Boldly Grasp Socialist Profit." According to his view, each socialist enterprise must persist in socialist orientation and under the premise of implementing party principles and policies, create more profits through technical reform and improvement of management. He has always advocated that the enterprises with more state capital should have the obligation to hand over more profits to the state. One of the important parts of the current reform of the economic management system in our country is to gradually get rid of the capital supply system and change possession of capital without reward to the one with reward; in defining the prices of various categories of products, it is necessary to consider the funds possessed by these products; encourage enterprises to make more profit for the state and enable them to combine the results of their business, including the amount of profit, with their own economic interest. All these views of Comrade Sun Yefang are of practical significance for us today in reforming the economic management system.

III. Actively Advocating the Reform of the Economic Management System

As early as 1956, Comrade Sun Yefang began to write articles in which he advocated the correct handling of the relationship between the planned economy and the law of value, and the reform of the socialist economic management system. In June 1961, he wrote a research report to the CPC Central Committee for internal reference in which he suggested the position of the system in socialist political economics and pointed out the necessity theoretically of reforming the current economic system and a series of the measures for carrying out the reform.

Comrade Sun Yefang pointed out: The core central issue of the financial system is the autonomy of enterprises, their responsibilities and their relations with the state, and all these mean the management autonomy of the enterprises. According to his view, it is not difficult to solve other problems in the system such as the relations between the central and local governments and the relations between rules and regulations and departments once the autonomy of enterprises is resolved. Following the tortuous path traversed over the past 20 years, we eventually began reforming the economic management system of our country by starting from expanding the autonomy of enterprises and up to today we have made considerable achievements in this aspect through practice. When we recall the above-mentioned views expressed by Comrade Sun Yefang in his research report at that time, we can see even more clearly the value of his views.

Comrade Sun Yefang held that under a socialist system, enterprises must become independent accounting units. Of course, enterprises with the ownership by the whole people only have the right to possess, use and control state finance and the state is the owner of this finance. Therefore the independence of socialist enterprises is relative. But since enterprises are independent accounting units, it is within the rights of the enterprises to sign contracts on supply and sales among themselves, and to discuss the volume of supply and sales and the specifications of products according to the original production orientation and within the original sphere, and the state and localities have no right to interfere with this. Some people worried that with their autonomy expanded, the enterprises would be bent solely on profits. But Comrade Sun Yefang argued and pointed out that when enterprises are able to improve their management and constantly improve their technology, individual labor consumption will be lower than the average necessary labor volume and such benefit is gained mainly through the objective effort of the staff and workers of the enterprises. Therefore we cannot limit such benefit. On the contrary we must encourage it because it is in the interest of improving labor productivity and developing social production.

Comrade Sun Yefang has also defined the theory and the limit of the autonomy of enterprises. Enterprises have "small autonomy" over the management of the capital value of simple reproduction. The state, on the other hand, has "big autonomy" over the capital value of the expansion of reproduction such as investment on new enterprises and the expansion of old enterprises and all these must be put under strict control by the state. If the state includes those matters that should be managed by enterprises under its control, then the control over enterprises will become too rigid; as a result, the state itself will be busily engaged in routine work and it will relax its control over major plans of state long-range construction and comprehensive balance work of the national economy. Contrarily, if the right over the amount of capital value of the expansion of reproduction is totally handed down to enterprises, it will easily give rise to duplicated construction and production and spoil the balanced development of the national economy.

To enable the hundreds of thousands of enterprises to display their initiative and creativity, Comrade Sun Yefang made a series of proposals for reforming the systems of planning, finance, goods and materials and price.

IV. Holding That Doing a Good Job in Circulation Is an Essential Condition for Developing Socialist Socialized Mass Production

Comrade Sun Yefang is the first economist in our country that has been opposed to regarding socialist economy as natural economy. Over the past decades, there existed a wrong view in economic theory and economic practice in our country that regarded the socialist economy as having no process of circulation. In fact, such a "theory of no circulation" advocated the management of the socialist economy with the methods used in managing a self-sufficient economy, a method characterized by a system of rationing of goods and blockading regions from each other. Such a theory seriously hinders the development of production socialization and the development of the production and exchange of socialist commodities. Comrade Sun Yefang pointed out that such a theory confuses the functions of exchange and distribution and attempts to replace exchange with distribution. In fact, without exchange and distribution, there would be no way to develop socialized mass production. At the same time, the "theory of no circulation" confuses the division of technical work within enterprises with social division of work, improperly regards the economy with the ownership by the whole people as a big factory and in this factory in which there exist only division of technical work among various workshops and sections and not social division of work. In fact, the socialist economy with the ownership by the whole people is composed of hundreds of thousands of enterprises with independent accounting and among these enterprises there exists social division of work. If enterprises do not carry out exchange of commodities among themselves, it would not be possible for the whole society to carry out reproduction smoothly.

In the late 1950's and early 1960's, Comrade Sun Yefang pointed out that Volume 1 of "Das Kapital" has more contents than the other two volumes suitable for us today in organizing and managing the socialist economy. It is only recently that this view has been accepted by more comrades and this situation has been proven by the fact that since last year, the broad masses of cadres who are responsible for economic work and theoretical workers have in general begun to study Marxist theory of reproduction.

Comrade Sun Yefang has always opposed the system of rationing and advocated that the circulation of the means of production be included in commerce so that production can be directly linked with sales. According to his view, it is not necessary for state planning bodies and economic management organizations to directly control supplies and sales that should be resolved by the hundreds of thousands of the relatively independent enterprises directly through contracts. The state must control only how to balance the difference. He also held that it is unnecessary to redistribute goods every year. Is it necessary for a husband and wife to hold a wedding ceremony every year? The state work of achieving overall balance must be based on contracts for production, supply and sales made by grassroots enterprises and must be carried out from bottom to top.

According to Comrade Sun Yefang's view, the socialist economy is termed a planned economy because following the introduction of public ownership, the production within each enterprise is carried out in a planned way while the production-supply-sales relations among various enterprises, that is the process of circulation and marketing, are organized in a planned and unified way. Comrade Sun Yefang particularly agreed with the following view of Comrade Liu Shaoqi: Circulation is the most sensitive; all the various problems in production are reflected in circulation and therefore in carrying out the study of economics it is imperative to pay attention to circulation.

At present, a number of problems have cropped up in the activities of the national economy because we did not organize circulation well. There are unsalable products and stockpiling of goods because production is carried out without directly linking it with sales while some other products are also unsalable because of regional blockades; some enterprises have failed to meet demand or have suspended production due to lack of materials, and the service of exclusive business of certain units has also dropped. All these things show that it is an urgent and very important task to solve the problem of socialist circulation by combining theory with practice.

V. Attaching Importance to Technical Progress and the Technical Reform of the Existing Enterprises

Comrade Sun Yefang always advocated the study of the relations of production by relating them to productivity and he was against carrying out the study without connecting it with productivity. He paid very much attention to the role displayed by technical progress in promoting production and its great influence in social economic relations. He held that under the socialist system, there also exist invisible losses and he resolutely opposed the management method over equipment that is characterized by freezing technical progress and "duplicating antiques." He said that enterprises must mainly depend on constantly improving technology in increasing economic efficiency, labor productivity and profits.

Comrade Sun Yefang pointed out that in developing both industry and agriculture, it is necessary to rely on both planning and scientific technology. The task put forth by the 12th party congress to quadruple the annual gross industrial and agricultural output value by the end of this century and particularly the task of industrial departments to more than quadruple their annual gross output value must mainly be grasped through the technical reform of the more than 400,000 existing enterprises. In developing production, we can no longer follow the old road of resorting to capital construction and building new enterprises, nor can we expand productivity on the basis of the original equipment, technology, raw materials and products. While the number of newly built enterprises is very limited, existing enterprises are very great in number. If, in developing production in the future, we are able to rely not only on the very limited new enterprises but also mainly on technical reform of the majority of the existing enterprises, we will consequently be able to develop production even faster and with higher economic efficiency and unified speed and efficiency. In the past decades, industry in the Soviet Union developed slowly and so did our industry in the past 30 years and consequently there appeared a wrong feeling that industry had "big basic figures and slow speed." In fact, the important reason for this situation is that the related economic management system hindered the technical reform of the existing enterprises and the transformation of the enterprises themselves. As a result, the majority of the old enterprises have failed to develop production and by solely relying on some newly built enterprises it is only natural that production is developing more and more slowly.

In order to enable the hundreds of thousands of existing enterprises to carry out technical reform in a planned way and step by step, Comrade Sun Yefang suggested increasing the depreciation rate of fixed assets. He suggested that in the first step, the depreciation rate may be increased from about 4 percent to about 10 percent and depreciation funds may be handed down to enterprises for renewing their equipment. He also suggested that measures must be taken through economic management so that enterprises will have both motive force and pressure to carry out technical reform.

* * *

Comrade Sun Yefang has his own original system of socialist economic theory and his own incisive ideas on socialist construction because he persistently links theory with reality, engages in bold probing and dares to uphold the truth.

He paid very much attention to the study of Marxist theory. In the mid-1920's, he studied Marxism-Leninism in the Soviet Union, and later was responsible for interpreting courses on political economics with his rich theoretical experiences. In the 1940's, he was working with the party school in central China and he found that within the party there existed a tendency of empiricism to neglect theoretical study. He wrote a letter to Comrade Liu Shaoqi in which he stressed the significance of theoretical study in guiding the Chinese revolution to victory. This view was fully affirmed by Comrade Liu Shaoqi. Following liberation, he was posted in leading positions in professional departments and research departments and in these departments he time and again stressed that theoretical study was perfecting "basic skills." He also attached great importance to studying and investigating economic life and from these activities he made theoretical summaries to direct practice. In the early 1930's, he used Marxism as guidance to study and investigate the economy in China and particularly the rural economy. Thanks to his deep investigations, he was able to correctly analyze the nature of the society in China, refute the fallacies of Trotskyist faction and popularize the party principles and policies about democratic revolution. The above-mentioned views and suggestions were made possible after he grasped numerous reference materials from reality. He suggested that research departments must establish contact with professional departments and demanded that the Economic Research Institute of the Chinese Academy of Sciences be put under the leadership of both the CPC Central Committee and the State Planning Commission. In this aspect, he was supported by Comrades Zhou Enlai and Li Fuchun. He actively suggested research units to build "experimental fields" in factories, shops and rural areas. He led a number of research personnel to stay in selected factories to help improve their work and gain firsthand experience for guiding overall work. He has also consequently written a number of research reports with rich contents and particular views. In short, Comrade Sun Yefang has been able to fully demonstrate the party's fine style of study characterized by linking theory with practice.

Another outstanding character of Comrade Sun Yefang is that he has the courage to uphold the truth and conduct criticism and self-criticism.

During the revolutionary war, Comrade Sun Yefang heroically fought against the enemy no matter whether in his secret fight when he was carrying out risky underground work or in the battlefield. When he was responsible for economic theoretical work following liberation, he also boldly opposed traditional wrong concepts. His motto is a sentence from a poem by Dante once quoted by Marx: "As at the entrance to hell, at the entrance to science we must make this demand: 'Here, all hesitation must be eradicated and here any cowardice is helpless.'" In the early 1960's, he was labeled by Kang Sheng and Chen Boda as "the biggest revisionist in China"; he was criticized and dismissed from office. But Comrade Sun Yefang declared: "I long ago realized the nature of this question and the argument that might occur. But it is very risky to try and solve this case that has been pending for decades." He was jailed during the 10 turbulent years. There were neither magazines and newspapers nor pen and writing paper in the prison cell. Nor was he allowed visitors or access to news reports. In spite of all this he did not give up. He said: "After I was put into prison, I did not feel sorry about dying, nor was fame important to me. But my views on economics that I had been studying for a long period could in no way be discarded; had I died I had to leave these views for the masses to understand!" On the second day following his imprisonment, he began to recall the draft for the book "On Socialist Economy" which he intended to write many years ago. Excluding the preface, the book has 22 chapters and 183 sections. During the 7 years and 5 days when he was deprived of freedom, Comrade Sun Yefang worked out in his mind the draft of the whole program on dozens of occasions. He also used the pen and paper that were given to him for writing "letters of confession" to write an article entitled "My Argument With Some Persons in the Economic Sector" in hundreds and thousands of characters to refute the fallacies of Chen Boda and the "gang of four." Such is his character of refusing to yield to any pressure and even imprisonment. No matter how bad the situations were, he unremittingly fought for the truth. In the first half of April 1975, Comrade Sun Yefang was bewildered when he was suddenly released but at the same time was forced to write the "three correct treatments." But he openly declared: "I will not change my will, my profession, my views!" Following the downfall of the "gang of four" and particularly since the measures taken by the CPC Central Committee to restore order, the criticism of "leftist" mistakes and the advocation of reforming the economic system have helped to prove that many of Comrade Sun Yefang's viewpoints are correct. But amid praise, he said: "My theoretical viewpoints are not and cannot be '100 percent correct.'" He acknowledged that in the past, under the influence of the "communist wind," he denied the award system and the system of profit retention by enterprises and said that this view "is 'leftist' thinking." Such an attitude of daring to make self-criticism is as valuable as his courage in upholding truth.

Comrade Sun Yefang is a veteran communist, with his membership dating back to the 1920's. He is an acknowledged authority in the sector of economics in our country. But he remains modest and open-minded. He sticks to the principle that all are equal before truth and he respects differing views, including the views of the comrades under his leadership. Time and again he ordered the editorial department of JINGJI YANJIU to give priority to carrying the articles that express views different from his own. He conscientiously replies to letters to editors. He suggested the holding of open discussions and stressed the importance of protecting the right of those criticized to debate. He said that criticism and struggles are not dreadful and that the agony is to have been deprived of the right to debate. He advocates clear-cut viewpoints, no matter how sharply expressed they are. He never cares about personal gain and loss and he never bears personal grudges. Some of the members of the group that is now helping him in writing books held different views with him in the past and yet he treats them equally, is concerned with them and is also training them.

These comrades, on the other hand, have also been completely convinced by his correct theoretical viewpoints and his lofty character and they have become his competent assistants.

Comrade Sun Yefang's incisive academic views and strict attitude in study have a considerable influence in economic circles in our country; they are generally respected and have also become famous in economic circles abroad. As his students, we want to follow his example, work hard on the economic theoretical front and make our contributions toward implementing the socialist modernization program of our country.

THEY ARE THE MOST LOVABLE PEOPLE

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 31-33

[Commentator's article]

[Text] Recently, from newspapers and journals to radio and television broadcasts, from street corners to numerous families and households and from urban to rural areas in the vast socialist motherland, the two glorious names of Jiang Zhuying and Luo Jianfu are being transmitted and eulogized. Their stirring deeds and lofty characters have touched and inspired the hearts of the people, and they can hardly refrain from tears. People simply do not know what words can be used to express their esteem and love for these two comrades. We should say: They, and people such as them, are our most lovable people today!

In talking about most lovable people, people will call to mind the volunteers of the war to resist U.S. aggression and aid Korea. During the war to resist U.S. aggression and aid Korea, the volunteers were generally acknowledged to be the most lovable people by all patriotic compatriots. Among them were heroes like Huang Jiguang, who blocked the enemy's machine gun with his chest and paved the way to victory for his comrades-in-arms; great fighters like Qiu Shaoyun, who strictly observed the law of ambush and remained motionless until his death although his body was on fire; and such internationalist fighters as Luo Shengjiao who gloriously gave up his life to save a Korean youth.

Every period has its own most lovable people. Such people as Zhang Side, Liu Mulan and Dong Cunrui were the most lovable people of the revolutionary war years. Precisely because of their struggle and sacrifice new China was born. Peacetime construction was also a battle in another form. In the battle of the 1960's, we had such most lovable people as Jiao Yulu and Lei Feng. Today, in the battle to create a new situation in socialist modernization, we have such most lovable people as Jiang Zhuying and Luo Jianfu. Their names should be inscribed in golden characters in the heroic history of the great practice of our communist movement.

In former years the fighters on the Korean battlefield, who endured all kinds of hardships and persisted in fighting with the motherland in mind, lived on only mouthful of fried wheat flour and snow. How simple and beautiful their words were: "We are eating snow here precisely so that the people of our motherland will not have to eat snow. They can sit in their clean, bright and spacious houses, brew pots of tea close to their small stove, eat what they want and do as they please." Must not such most lovable people as Jiang Zhuying and Luo Jianfu battling on the forefront of building material civilization and spiritual civilization also nurse the same aspiration? "The needs of the state are our responsibility. How can a scientific worker stand by with folded arms when practical problems crop up?" This was what Jiang Zhuying said as well as practiced. "In science, the important thing is the 'result' of research and not 'individual' researcher." This was what Luo Jianfu said as well as practiced. For years they diligently worked and created under conditions similar to "mouthfuls of fried wheat flour and snow," willingly served as "paving stones" and were always ready to offer the most valuable scientific research materials they had mastered to others. People could not help associating their character with that of the telephone operator who used his own body as a cable to ensure the smooth function of the communication network on the Korean battlefield in former years. Jiang Zhuying and Luo Jianfu were indeed worthy of the title of most lovable people!

The most lovable people on the Korean battlefront in former years were the indomitable fighters made of special stuff. Although seriously wounded, they nevertheless gritted their teeth, stuffed the intestines back into their abdomens, covered the wounds with their broken hands and continued to give battle. Today, we have the case of Luo Jianfu who, when his chest was bloated by tumors and his skin was burning with intense pain, still refused to take pain-killing injections or sleeping pills because that would interfere with his continued investigation and manufacture of the "Type III" graphic generator. Likewise, Jiang Zhuying also bravely bore the pain of numerous illnesses and continued his battle until his final breath. How faithful and loyal they were to the cause of the party, the people and the motherland! Like candles, they burned themselves up and gave all their heat and light to the socialist cause. This kind of spirit is on the same plane as that of such heroes as Huang Jiguang and Qiu Shaoyun. To call them most lovable people is not at all excessive!

As in the case of the tens of thousands of most lovable people from among the workers, peasants and intellectuals who appeared on the Korean battlefield, there are also tens of thousands of advanced elements who selflessly give their all for the country, for society and for the people in every field of socialist construction. They came from among the workers, the peasants, the PLA and also the intellectuals. Jiang Zhuying and Luo Jianfu were the representatives of advanced intellectual personalities. There are still many more advanced personalities like them among the intellectuals. Wang Jiyong has been praised as a "living Jiang Zhuying," Zhang Tongxing has been praised as a "living Luo Jianfu," and famous economist Comrade Sun Yefang is still giving counsel in creating a new situation in socialist construction despite his serious illness. They all are this kind of advanced personality. They radiate the bright light of communist ideology and they are the reappearance of the proletarian revolutionaries with communist spirit of the war years under new historical conditions. They understand science and have the knowledge, and furthermore, they also keep on seeking and exploring and use their knowledge to provide the most effective service for socialist construction. They have made so many contributions to the party, the motherland and the people, but they are still not satisfied and feel that they have not done enough. In material life and treatment, they ask almost nothing from the party, the motherland and the people, but they always feel satisfied and refuse what is actually extremely rational consideration. They freely and unconditionally dissolve themselves completely into the socialist cause of the people. Their greatest happiness is dedicating their all. For the sake of struggling to uphold the truth, they are never the slightest bit disloyal or half-hearted no matter under what kind of conditions. "The road may be long and far, but I will keep on searching from top to bottom." "As this is also what my heart dictates, though I may die nine times I still have no regrets!" They are the best offsprings of the party and the most precious wealth of the people. "What they eat is grass and what they give is milk and blood." These words are also most appropriate when applied to them. Our people, our nation and our socialist motherland should take pride in them. They are also the examples people throughout the country should emulate.

The deeds of Jiang Zhuying and Luo Jianfu have also most clearly showed that they are indeed worthy to be called the outstanding vanguards of the working class. Their deeds have also manifested the spiritual features of intellectuals trained, tempered and tested for more than 30 years. Facts have shown that most of our intellectuals have ideals, aspirations and capabilities. They are imbued with the sense of responsibility of developing China. They have inseparably bound their destiny with the destiny of the workers, the peasants and the socialist motherland. They have indeed long become a component of the working class. They are one of the three basic social forces of socialist modernization. Our socialist construction must rely on the creativity and labor of the workers and peasants. At the same time, we also absolutely cannot be short of the efforts and struggles of the intellectuals. Without a powerful contingent of intellectuals, we will not be able to rely on the forces of science and technology and the forces of the intellectuals to promote the development of productive forces, and we will also not be able to raise the scientific and cultural level of the whole nation and educate the people to become disciplined workers with ideals, ethics and culture. Without intellectuals, the task of quadrupling production cannot be fulfilled, and the building of the two civilizations will become an empty phrase. Before liberation, our country was an economically and culturally very backward semifeudal and semicolonial society, and we had actually very few intellectuals. Since liberation, along with the development of cultural and educational undertakings, we have more intellectuals trained by the working class; but because of the fetters of "leftist" ideology and the concept of small production, the growth and expansion of the contingent of intellectuals have for a long time been suppressed. During the 10 years of internal disorder of the "Great Cultural Revolution," large numbers of intellectuals were prosecuted and this widened the gap between our science and technology and those of the advanced contemporary international level. At present, the broad masses of intellectuals in our country have shouldered the glorious and arduous mission of carrying forward the revolutionary cause and forging ahead into the future, as well as invigorating and developing our scientific, cultural and educational undertakings. Their tasks are extremely arduous; but their family burden is heavy, their living and working conditions are poor and the state of their physical condition is rather serious. This kind of condition is also particularly noticeable among middle-aged intellectuals such as Jiang Zhuying and Luo Jianfu. All these have more clearly manifested the importance and urgency of implementing the policy toward intellectuals and giving full play to the role of intellectuals.

However, even now, the mentality of belittling and despising intellectuals still finds a certain market. Some comrades still do not acknowledge that like the workers and peasants, the intellectuals are a reliable force for building socialism. Some comrades have remained indifferent to the fact that the treatment for intellectuals is inclined to be too low, and even resented improving the treatment and working conditions of intellectuals. Some comrades have assumed airs as representatives of workers and peasants and raised objection to the all-round implementation of the policy toward intellectuals. In their eyes, it seems as though putting the stress on knowledge and intellectuals means negating the value of physical labor and the role of the workers and peasants. This viewpoint of setting the intellectuals against the workers and peasants is extremely wrong and runs counter to the opinion of the workers and peasants working diligently and conscientiously on the frontline of production. The working masses understand best the role played by science and technology in production as well as in lightening and protecting labor. They also clearly see the gap between the contribution and treatment of scientific and technical personnel. They fully understand the need for closely integrating physical labor with mental labor and the fact that the workers and intellectuals cannot be separated from each other. After the practice of the production responsibility system, the broad masses of peasants have a strong desire for scientific knowledge, and it is no longer news that technicians have become targets whom the peasants are competing for. This mentality of not acknowledging that complicated labor is worth more than simple labor, not acknowledging the fact that mental labor requires certain working conditions and therefore not agreeing to improving the working conditions of intellectuals to heighten and enhance the efficiency of mental labor, is detrimental to the development of productive forces and to the early realization of modernization, and therefore, also does not conform to the basic interests of the workers and peasants. The workers and peasants have all along regarded the intellectuals as indispensable members of their own working class. They call upon all units with intellectuals to correct their understanding and attitude regarding intellectuals, conscientiously implement the party's policy toward intellectuals with a high degree of consciousness and fully trust and protect the intellectuals. In particular, they must pay attention to taking care of and cherishing the group of outstanding intellectuals, who are hardworking like Jiang Zhuying and Luo Jianfu and have genuine ability and learning, let them boldly put their ideals and aspirations for building socialism to use and bring into play all their wisdom and strength.

Let us emulate our most lovable people and protect our most lovable people! We must work hard at our posts with the zeal of "moving with the speed of a shooting star and taking two steps of the stairs at the same time" of Comrade Jiang Zhuying to offset the loss caused by his premature death. In particular, party committees at all levels must consciously use this kind of drive to implement the party's policy toward intellectuals and to avoid further losses. This is the most fitting way for us to commemorate such most lovable people as Jiang Zhuying and Luo Jianfu!

MAKING SERIOUS INVESTIGATIONS AND STUDIES IS THE GUIDING PRINCIPLE FOR THE THOUGHTS AND ACTIONS OF ALL PARTY CADRES

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 34-36

[Ideological commentary by Shi Youxin [2457 0645 2946]]

[Text] Today, when reading the series of letters and comments written by Comrade Mao Zedong in 1961 on investigations and studies, we still have a feeling of freshness and closeness. One should proceed from reality in doing everything. He who has made no investigations has no right to comment. This should become the guiding principle for the thoughts and actions of party leaders and comrades of the whole party.

Making investigations and studies is the basic means of Marxism. No matter what we do, and what we work at, it is necessary to bring the subjective to meet the objective and thoughts to actions in order to reach the expected goal. If they fail to meet with each other we will run into a stone wall and meet with failure, which goes contrary to our wishes. Why is subjectivism wrong? Because it does not proceed from reality but from subjective desires. Comrade Mao Zedong said: The Marxist spirit is to make serious investigations and studies on specific problems and to make concrete analysis instead of abstract and subjective analysis. Marxist philosophy is both dialectic materialism and historical materialism. It guides people to have an accurate understanding of the true colors of the objective world. Whether it is making revolution or doing construction, no success will be achieved unless we proceed from the realities of our country and integrate the universal truth of Marxism with the concrete realities of our country. And the course of integration is also the course of investigating realities and learning the objective law. It is not simply a matter of working style to go deep into the realities of life, make investigations and studies, to get hold of the large amount of reliable material and then draw forth the correct strategies, but it is a matter of upholding Marxist epistemology and the party's ideological line. If one keeps oneself from the colorful and concrete perceptual knowledge and away from the base and source of recognition, how can one achieve a correct understanding? Some comrades stick to the old habit of having no contact with reality which was formed over years, and some are used to copying word for word the instructions from senior authorities when issuing orders. Instead of taking into consideration the concrete situations of one's own local area and unit, suggesting new methods and blazing new roads, they either seek uniformity regardless of real conditions or give vague and general instructions. The problem lies in the fact that their thinking is detached from reality. A great number of facts in real life have shown that whoever goes investigating among the masses, his thinking will be liberated and he will be able to create a new situation for the work. Whoever fails to make investigations and studies, his thinking will be rigid and he will get nowhere. Therefore it should always come first to uplift our spirit, do a harder job in making investigations and studies and straighten out the ideological line.

If we only recall history, we will come to realize that whether we make investigations or not has a direct bearing on the prosperity and success of the course of revolution and construction. In the years of revolutionary warfare, owing to subjectivism which did not make investigations and studies, and which did not proceed from realities, our party suffered great losses, most of the revolutionary bases collapsed and over 90 percent of the revolutionary forces were lost. Comrade Mao Zedong put forward the road of having the countryside encircle the urban areas, and a whole series of principles and policies on new democratic revolution. The fact that they could lead the Chinese revolution to victory is simply because Comrade Mao Zedong did not copy exactly the experiences of other countries, but through investigations and studies he got to know the national conditions of China and then concentrated the wisdom of the whole party and made concrete use of Marxism to bring things into conformity with the realities of our country. After the founding of our country, we had similar experiences and lessons. In any period that attached importance to investigations and studies, such as the early fifties and early sixties, party principles and policies were relatively in conformity with the objective realities and the various items of work got on very well and the achievements were remarkable. In some other periods, the guiding principles and policies were seriously separated from reality. This gave rise to great losses. One of the important reasons is that few or no investigations were made. Since the 3d Plenary Session of the party's 11th National Congress, the party Central Committee has repeatedly stressed seeking truth from facts, liberating one's mind and proceeding from reality. Resuming and encouraging the fine tradition of making investigations and studies has again brought the various principles and policies in conformity with the realities of our country as well as with the aspirations of the party and the people. As a result, our party is once again full of vitality and prosperity just as in the times of Yenan and the period just after the founding of the country. Historical experiences have proved that the rise and the decline of the party's course is closely related to the growth and the disappearance of the style of making investigations and studies. It is at a great cost that our party has come to realize the importance of making investigations and studies.

Comrade Mao Zedong said: Making investigations and studies is extremely important. There are three conditions to doing a job: 1) To have a clear picture of the situation; 2) great determination; and 3) right methods. Among these three, to have a clear picture of the situation is the basis.

Only if one has a clear picture of the situation can the resolution one makes be correct. The stronger the right resolution, the better can one do the job. On the contrary, if one makes up one's mind before making sure of the situation, it might be resolution to do a wrong action, and the stronger is this resolution the worse the matter might turn out to be. These kinds of examples are not uncommon. To have a clear picture of the situation is the precondition of correct methods. An important reason for our winning battles in the past is that our warfare tactics--the deployment of army forces, the selection of breaches, the confirmation of the time of attack--met with realities. Correct deployment could only come from previous thorough reconnaissance and studies of the situation. In 1936, Comrade Peng Dehuai led the Red Army to attack Shanxi. He made surveys by himself for a week in order to decide when to cross the Yellow River. In 1949, in attacking Taiyuan, we had over 200,000 troops yet he still could not set his heart at ease. He again led the scouting officer round Taiyuan himself and investigated the place for 4 days. Now we should create an overall new situation. The problems that are waiting to be solved are much more complicated than fighting battles. The tasks are even harder. They are badly in need of "commanders" at various levels, commanders who will personally go investigating at the front line.

At present, the situation is developing at a rapid pace. New experiences, new creations, new situations and new problems in different spheres and respects keep emerging. Under this situation, being a leader should not just mean having one's own thinking keep up with the development of the situation but should also mean making a timely summary of the masses' experiences and creations and then raising them to a higher level, which in return might further guide the masses' practice. Furthermore, leaders should foresee the trend of development of matters and stand in the front to guide them. From the laws of cognizance, once the events and conflicts that people face are more complicated and variefied the change will be faster, with that, the more should we take care to avoid simple, one-sided and rigid recognition and the more need we go deep into reality to make investigations and studies. At present, there are some comrades who do not have much determination in doing things. They lack confidence and means. One important reason is that they have stayed in the office for too long a time and have made too few investigations and studies of realities. We are dialectic materialists, not idealists. Our determination and confidence do not come from subjective imagination which has no factual basis, instead, they are built on the basis of knowing the realities and the objective law. When we have a thorough understanding of a certain matter or a certain job and find the law, we will naturally be filled with determination and confidence.

The same thing applies to methods. The various conflicts in social production and social living mostly take place and are exposed at the grassroots level. It is the cadres at the grassroots level and the masses who know every detail of the various contradictions. Inexhaustible wisdom is buried deep among them. There are many wise and capable persons who have rich practical experience. Every day they deal with different kinds of contradictions. They are all there analyzing and solving contradictions, therefore they are also good hands at solving different kinds of contradictions. There are many problems that we could not find solutions to by racking our minds in the office. Once we have had discussions with the masses and the cadres at the grassroots level, there will be solutions. Any leaders who have boldness and means, who can make a breakthrough in the working situation despite complicated contradictions, are leaders who are good at discovering, summarizing and spreading the experiences and creations of the masses from investigations and studies. Different forms of systems of contracted responsibilities with payment linked to output have been created by the masses. The party Central Committee discovered this creation and encouraged it. This has given rise to a great readjustment in the relationship of production in our country's rural areas. As a result, the development of productive forces has been vigorously pushed forward. Comrade Mao Zedong always said in Yenan that sometimes he was uncertain about something and felt upset, but once he got in touch with reality and with the masses and cadres at the grassroots level, he would know what to do. Even a leader like Comrade Mao Zedong with a high level of Marxism, profound learning and rich experiences had to get his ideas and methods by learning from reality and the masses. Should not we do just the same?

Some comrades think that they can have a clear idea of things and give working instructions by listening to reports and reading written reports brought to them from grassroots units. Of course this method is necessary, yet it is quite insufficient. A more important and basic means to grasp reality is if the leaders take a direct part in making investigations and studies. Only by so doing can they obtain basic knowledge about various problems as well as a wealth of firsthand material. Only by doing so can they listen directly to the voices and opinions of the masses and have a better understanding of their experiences and creations. Things and happenings found out in such a way are more authentic and reliable than material retold or written down by some other people. For they are facts seen and heard by the leaders themselves when they make their personal appearance at the forefront of practical activities. They find out the facts directly from the participants of the event on production and work, therefore they are vivid and concrete, true to life and original as well, whereas items in written reports are generally polished. They are naturally influenced by the thinking method, level of understanding, analyzing ability and writing skill of the report writers. Some might add inflammatory details to the account, changing one to two things; some might be poor at summing up, making analysis and expressing themselves, so as a result, some very good experiences are not properly presented. Even though what the leaders read are reports written after making serious investigations, (this is of great use) yet to the leaders themselves they are still indirect experiences though they are something of direct experience to other people. Therefore, it is still necessary for us to make investigations ourselves. Self-acquired firsthand material is the base, and some other written reports and data are then referred to. As far as our horizon and insight are concerned, it will make a lot of difference if we have not looked into the matter. Having done so, it will enable us to grasp the main contradictions, experiences and problems. Furthermore, it will enable us to analyze, select and make use of the material in the written reports on a higher plane. Finally, we can combine them with what we find out in our investigations, from which we might come to some essential conclusions which we take as our guiding principles.

The purpose of making investigations is to solve problems and to bring the subjective in conformity with the objective. Therefore, it is necessary to adopt an honestly scientific attitude in making investigations. This is a basic demand on making investigations and studies. In 1932 Comrade Mao Zedong pointed out: "One of our slogans is that he who has made no investigations has no right to make comments. The other is that he who did not make proper investigations has no right to make comments either." The second slogan can be said to be a development of the first one. This shows that the method of investigation encouraged by our party does not mean any kind of investigation, but the right investigation. Any investigation that goes against objective reality such as sticking to first impressions, seeking proof, especially for oneself, with bias, or investigation which does not speak the truth though knowing only too well there is falsehood will not only be unable to reach the right conclusion but the label of "making investigations and studies" might do a lot of harm. We have learned not a few lessons in this respect. We should be on our guard against that. No matter under what conditions, we should make a comprehensive analysis and summing-up of our investigation material. We shall not be cheated by various false phenomena, nor should we be satisfied with observation that are isolated, one-sided, and that might shut our eyes to the law of development of matter. Nor shall we be afraid of listening to different opinions. Above all, we should not be afraid that the judgment and decision we have already made might be toppled by the trial of practice.

Making investigations is something of significance. Responsible leaders of the party committees at various levels should personally set the ball rolling. Some comrades have emphasized that they are too busy with their work to go to grassroots units. It is a fact that they are busy and they need to squeeze in time to go down. Leading comrades of the party Central Committee are occupied with a myriad of state affairs every day. Doubtlessly, they are the busiest of all. However, they still squeeze in time for making investigations and studies in the four corners of the country. We should learn from their examples. Here, making investigations and studies and improving the style and method of leadership are closely related and help each other forward. If we do not make investigations and studies the more easily will our leading energy get trapped in trivial affairs; as a result, the less time we will have to get to basic units. In order to change this vicious circle, we should begin with making investigations and studies. Leading organizations at various levels, especially the main leading comrades, shall take the lead in changing their leading style and improving their method of leadership. Seize a major period of time and go deep into the realities of life. This will not only help one do one's own job as a leader well, but can give the juniors an example to follow. Similarly, this might well create conditions for the junior organizations to change their style and improve their working methods.

There is a giant in Greek mythology called (Antai), the son of the sea god Poseidon and the earth goddess Gaia. When fighting, he can continuously absorb strength from his earth mother and therefore be incompatible on the condition that his body does not leave the earth. We can say that the people and the masses are the mother of us communist people. As long as we do not keep ourselves away from the masses and reality, and make investigations and studies, and seek truth from facts, as long as we proceed from reality in doing anything, we can incessantly absorb inexhaustible strength from the mother. Our course will surely be to win one victory after another.

WHAT COUNTS MOST IS TO SOLVE IDEOLOGICAL, UNDERSTANDING PROBLEMS OF LEADING BACKBONES

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 37-39

[Commentator's article]

[Text] At present, cadres throughout the country are studying the documents of the 12th CPC Congress and this vigorous mass drive is developing in depth. The gains of this study campaign are notable. The majority of cadres have more or less gained the same understanding of the program, principle and policies formulated by the 12th CPC Congress and have begun to solve some ideological problems. However, it must be realized that this is merely a good start and the achievements are still initial ones. There are still many problems both in the intensity and scope of study which require us to develop this study drive in depth. However, the leading bodies of some localities and units do not quite understand this. After leafing through the pages once, they thought they had "already studied" the documents and grasped their essence "sufficiently well." Thus, they slackened their efforts in study. In reality, they have not grasped the essence of the documents. They have not found out, in relation with their actual thinking, the principal ideological obstacles to the implementation of the guidelines of the 12th CPC Congress in all fields of work and conscientiously solved the major problems of understanding in the leading bodies. This method of study will invariably affect the implementation of the guidelines of the 12th CPC Congress.

In order to truly master the documents of the 12th CPC Congress, deepen our understanding and bring our thinking into line with the tasks, principles and policies formulated by the congress, it is first necessary to unify the ideology and understanding of the leading bodies at all levels, particularly the leading backbones at and above the county level. Practice since the 3d Plenary Session of the 11th CPC Central Committee shows that how fast a locality, department or unit can develop depends on whether or not the leading body follows a correct ideological line, whether it has achieved unity in ideology and understanding and whether it is truly at one, politically speaking, with the Central Committee. Where a good job has been done in studying and grasping the guidelines of the 12th CPC Congress, the political awareness of the leading backbones is high and no time has been lost in emancipating the mind, things will develop swiftly and there will be a new situation in all work and rapid progress in production and other fields of construction. On the contrary, if the leading cadres of a locality or unit are slow in becoming politically awakened and adopt a wait-and-see attitude, the initiative of the masses of cadres and people will not be brought into full play and work and production will lag behind. Therefore, in the present drive to study the guidelines of the 12th CPC Congress, leading cadres at all levels must learn from this experience, avoid "going through the motions" and concentrate first on solving the problems of ideology and understanding of the leading backbones. Leading backbones must pay special attention to this task and we must pay special attention to the leading backbones. Each level must keep an eye on the other and it is necessary to grasp the work down to the grassroots level. This is the key to mastering the documents of the 12th CPC Congress.

The guidelines of the 12th CPC Congress are the development and improvement of the line, principles and policies since the 3d Plenary Session of the 11th CPC Central Committee. In linking with one's actual thinking, it is first necessary to lay stress on linking with one's actual thinking since the 3d plenary session and gain a deeper understanding of the line, principles and policies since then. Leading backbones at all levels must earnestly review the party's principles and policies since the 3d plenary session and find out which of these have been implemented quite well and where they fall short and why. They must also find out if there are ideas in their own locality or department which are inconsistent with the guidelines of the 12th CPC Congress. On the basis of review and sorting out, they will be able to find out the principal ideological obstacles to the implementation of the guidelines of the 12th CPC Congress, seize on some major problems of ideology and understanding and work out specific solutions. For example, a small number of cadres, including some leading cadres at and above the county level, feel uneasy about some of our present policies and fear that these policies "show deviations" and are "inclined to the right" because they have not thoroughly rid themselves of the "left" ideological influence. They welcome diversified economic undertakings in practice but are not convinced on a theoretical level. In particular, they are still skeptical about the socialist character of the production responsibility systems instituted in the countryside. Some of them think that we are drifting farther and farther away from communism. In the past, undertakings were "large in size and collective in nature." Now they are "small in size and private in nature." For another example, some cadres are one-sided in their understanding of the relationship between economic construction and the building of spiritual civilization. They think that once production and the people's standards of living have gone up, spiritual civilization will be built as a matter of course. They fail to understand the importance of ideological and cultural education and the fact that education and science are one of the strategic priorities of economic development. They think that these are "light tasks" that can be dispensed with. Some of them still entertain "left" prejudices about intellectuals and refuse to recognize that intellectuals, like workers and peasants, are forces we must rely on in building socialism. They think that "intellectuals were subjected to too much criticism in the past but are too lavishly praised now." They even ask: "With the intellectuals becoming so popular, what will become of the Communist Party?" In dealing with this kind of major problem of ideology and understanding, leading backbones at all levels must bravely say what is on their mind, be bold in appraising oneself and consciously expose contradictions in ideology and in work with the spirit of rectification of work style. They must earnestly unfold criticism and self-criticism and overcome "left" and right errors in ideology and understanding which are inconsistent with the guidelines of the 12th CPC Congress. Only in this way will it be possible to remove the obstacles to the implementation of the guidelines of the 12th CPC Congress.

In emphasizing that we must now lay stress on linking with actual thinking, we are not talking in generalities and it certainly does not mean that we are not going to solve actual problems of work which can be solved now. Rather, we must bear in mind the party's central tasks and try to do a better job in solving major problems and tackling formidable tasks in actual work on the basis of unified thinking. For example, the organizational reform, reforms in the economic system, party rectification and so on which we are carrying out now or will carry out in the future are all formidable tasks involving complicated problems and a strong policy bearing. In order to smoothly accomplish these tasks, leading cadres at all levels must first of all conscientiously study the documents, deepen their understanding and overcome incorrect ideas. If they are content with their half-baked knowledge and do not conscientiously study the guidelines of the documents, they will not be able to fight these tough battles well.

As the situation develops, our party will continuously put forward new tasks to implement the guidelines of the 12th CPC Congress. For example, the new constitution adopted by the Fifth Session of the Fifth NPC and the Sixth 5-Year Plan are more concrete, enriched and developed than their corresponding sections in the documents of the 12th CPC Congress. We must study these documents well in order to continuously deepen the drive to study the documents of the 12th CPC Congress.

A GOOD EXAMPLE IN USING MATERIALIST DIALECTICS TO SUM UP EXPERIENCE AND GUIDE CONSTRUCTION

Beijing RED FLAG in Chinese No 24, 16 Dec 82 pp 38-42

[Article by Zhang Jing [4545 4544]]

[Text] A very important feature of the report to the 12th party congress is that in summing up experiences in the past or in expounding a series of major questions in socialist construction, this report has followed the principle of seeking truth from facts and the scientific ideological method of materialist dialectics. This view is, in fact, what has been desired by the whole party and the whole nation in the tortuous path they traversed over the past many years and it represents a key for guaranteeing the prosperity of the socialist cause. We must not only conscientiously read and study each part of this report but must also understand the whole content so that we will be able to understand the scientific ideological method represented in this report.

Materialist dialectics is a theory that is within our reach to understand. This Marxist ideological method requires us to understand things according to their objective nature and their inner law, without any subjective and metaphysical elements. Things themselves are complicated and multifaceted and therefore our understanding must not be simple and lopsided, nor can we use our lopsided view to study the overall nature of things. Things are constantly moving, developing and changing and therefore our understanding must not stagnate. As things themselves include contradictions, it is necessary for us in analyzing and handling problems to constantly study the movement of the contradictions of these things and grasp the dialectical relations of the unity of opposites of the two sides of contradictions. The root cause of our failures in the past was mainly that ideologically we parted from materialist dialectics and the law of the unity of opposites and that in some major questions, we seriously committed the mistakes of subjectivity and lopsidedness. In their attempt to seize party and political power, the counterrevolutionary cliques of Lin Biao and Jiang Qing pushed this subjectivity and lopsidedness to their utmost and consequently subjectivity and metaphysics were rampant. Measures have been taken since the 3d Plenary Session of the 11th CPC Central Committee to restore order and basically correct subjectivity and metaphysics ideologically and restore the scientific ideological method of materialist dialectics. The reason for the report to the 12th party congress containing scientific nature and tremendous convincing power lies in the fact that this report has followed and practiced the demand of materialist dialectics.

These features of the report are first demonstrated in analyzing and expounding such questions of major principle as social principal contradictions and the party key works on the relationship between economy and politics.

We suffered setbacks in the past primarily because we did not proceed from reality in handling such major questions and we handled them with subjectivity and lopsidedness. After the exploiting class was eliminated as a class, we still regarded principal contradictions as class struggle and stressed the importance of taking "class struggle as the key" while under the situation in which economic construction has become our central task, we still stuck to the past practice of emphasizing such slogans as "giving prominence to politics" and "putting politics in command" and launched political movements one after another. Such practice not only delayed the shift of key work but also did harm to cadres and the broad masses of the people and confused normal relations among mankind. As a result, some comrades became used to "taking the road they are familiar with," that is, they became used to undertaking political struggle and political movements. However, some comrades were indifferent to politics and they were sick of political struggle. This is why, in the process of restoring order taken since the 3d Plenary Session of the 11th CPC Central Committee, some cadres have failed to totally rid themselves of the influence of the past "leftist" mistakes and intentionally or not have taken the old road of "class struggle as the key." Some other comrades have disregarded proletarian politics, opposed the "left" with the "right" and even doubted and denied the four basic principles. In the final analysis, these two tendencies were caused by people's understanding that departed from reality, by objectivity and by failures in summing up experiences and lessons well and correctly understanding the changes in social principal contradictions, shift of key work and the dialectical relations between economy and politics. An important contribution of the report to the 12th party congress is that following the "Resolution on Some Historical Questions Within the Party Since the Founding of the PRC," this report has further and basically resolved these problems that are concerned with the whole situation. This report not only points out that class struggle is no longer the social principal contradiction and the key work of the party and the state has been shifted to economic construction but also dialectically expounds the relationship between the principal contradiction and other contradictions and the relationship between economy and politics following the shift of key work. It puts the socialist modernization program in the first place, but at the same time it in no way neglects the importance of socialist political building and the party ideological and political work; it has completely corrected the "leftist" mistakes of "class struggle as the key" and yet it also points out the necessity of carrying out class struggle that still exists within a certain sphere. The whole report is characterized by the spirit of economy being the key, politics the guarantee and that the modernization program we are implementing is socialist modernization. Thus, under the new historical period, the report correctly handles the dialectical relationship between economy and politics. By following the orientation pointed out by the report, we will be able to prevent subjectivity and lopsidedness and avoid the past lesson of going from one lopsidedness to another and from one extreme to another.

Second, the features of the report are shown in a series of guiding ideology and principles and policies with regard to economic construction and political building.

Economically, the report includes a very important guiding ideology of paying attention to dialectically unifying speed with efficiency. When referring to the strategic goal of quadrupling annual gross industrial and agricultural output value by the end of this century, the report particularly stresses the importance of "constantly improving economic efficiency" as the premise; it also stresses the importance of defining strategic keys and strategic measures while the arrangement of the various tasks during the period of the Sixth and Seventh 5-Year Plans must also be centered on improving economic efficiency so as to create conditions for unifying speed with efficiency still better in the future. The report points out that in realizing strategic goals it is imperative to follow the four major principles: concentrate funds for key construction and constantly improving people's life, persist in the leading position of the state economy and develop various forms of economy, persist in planned economy as the main and market regulation as the supplement and persist in self-reliance and expanding economic and technical exchange with foreign countries. In fact, these four principles represent the four pairs of contradictions that are related with the whole situation in carrying out socialist economic construction, the four pairs of the dialectical relationship of the unity of opposites and the result of deeper understanding of the law of socialist construction. For quite a long period in the past, there was "leftist" lopsidedness in these aspects and when we were correcting this lopsidedness, some people slid down to another extreme. We must acknowledge that in handling these relations, lopsidedness may easily happen because people have different ideological levels and positions. But when we have grasped materialist dialectics and we are good at carrying out investigations and consider and analyze problems dialectically, we will be able to see that the two sides of contradictions contradict and oppose each other and at the same time to see that they are related to each other and they penetrate each other. Consequently, we will be able to raise our ideological level, we will not be limited by our positions and we will be able to decrease lopsidedness considerably.

Politically, the guiding ideology and principles and policies for building socialist spiritual civilization and developing socialist democracy mentioned in the report are also characterized by materialist dialectics, objectivity and comprehensiveness. The general guiding ideology in building spiritual civilization is that the building must be carried out simultaneously with the building of materialist civilization (because these two aspects condition and are aimed at each other), while in building spiritual civilization it is necessary to simultaneously grasp the building of culture and ideology (because these two aspects penetrate and promote each other). Theoretically, the report has made new developments and contributions in its profound presentation of the dialectical relations of the unity of opposites of these two aspects and therefore it enables us to understand and carry out in an overall way the socialist construction and the building of spiritual civilization and avoid lopsidedness in doing so. For example, the system of our country is the system of the dictatorship of the people's democracy. On the one hand, this system guarantees that the broad masses of the people are masters of their land while on the other, it guarantees to exercise dictatorship over the few antagonistic elements and these two aspects are dialectically unified. We are determined to develop socialist democracy but it is not permitted to give the antagonistic elements that are harmful to society the freedom to carry out sabotage activities. We are determined to exercise dictatorship over the few antagonistic elements but we can in no way confuse the enemy and ourselves, nor is it permitted to harm the people's right of freedom. Another example is that the building of socialist democracy must be combined with the building of a social legal system. Without a legal system based on democracy there will be no legal system to manifest the will of the people. Democracy without a legal system is neither dependable nor in a position to guarantee democracy. The right of the people to become the masters of their land must be legalized and systematized. In addition, it is the obligation of each citizen to observe and implement law. The party has led the people in working out the constitution and law while the party itself must carry out its activities within the range permitted by the constitution and the law. All these supplement each other and are dialectically unified. Another example, the implementation of the open-door policy and the policy of activating economy in the new historical period must be combined with the move to crack down on serious criminal activities in economic, political and cultural sectors. "It is wrong to pay attention to the latter aspect and doubt the former one and it is dangerous to stress the importance of the former and neglect the latter." These two policies are apparently scientific and dialectical.

Third, the features of the report are shown in the art of leadership and in working method.

Following the 3d Plenary Session of the 11th CPC Central Committee, the leading work of the CPC Central Committee has once again been characterized by the fine tradition of seeking truth from facts. No matter whether in restoring order, in working out and implementing principles and policies or in handling actual problems, attention has been paid so that in overcoming one wrong tendency we will not neglect another wrong tendency and we will be able to correctly launch ideological struggle against a "leftist" or rightist line. In these aspects, one of the most typical and the most educationally significant is that mentioned by the report. That is to say, in the process of restoring order, we have overcome the obstacles from the "left" and the right. The "leftist" obstacles affirmed everything and opposed clarifying and criticizing the "leftist" mistakes that had existed for many years and the mistakes made by Comrade Mao Zedong in his late years. The rightist obstacles denied everything in the process of clarifying and criticizing, thus "in throwing away the bath water, they also threw out the baby too." In treating these two lopsidednesses, our party did not resort to a simple method of oppression; it relied on the collective wisdom of the broad masses of cadres and people and gradually solved these problems through education and enlightenment. As a result, while the past mistakes were analyzed and criticized, we have also been able to protect the fine party traditions, the scientific truth of Mao Zedong Thought and the historical position of Comrade Mao Zedong. As mentioned by the report, over the past few years, our party has been able to oppose the "leftist" tendency that attempted to restore the wrong theory and policies to those during and prior to the "Great Cultural Revolution"; at the same time, it also opposed the rightist tendency of bourgeois liberalism that doubted and denied the four basic principles. In this aspect, our party is not only firm in its clear-cut stand but is also good at carrying out persuasion and education and making the best use of the circumstances. It has thus shown excellent art of leadership and scientific working method.

How to estimate situations and treat difficulties is a common problem in the process of revolution. These problems have become even more prominent following the serious setbacks suffered by the party and the state during the 10 turbulent years. In this aspect, the report has also resorted to the objectivity and comprehensiveness of materialist dialectics in overcoming certain subjectivity and lopsidedness in certain understanding and consequently it has been able to help people clarify vague ideology and encourage them to make progress. For example, the analyses and comparison made in the first part of the report about the historical changes that happened twice during the democratic revolution and the present historical changes are helpful in guiding people to treat situations and difficulties dialectically. The analyses made in the sixth part of the report about the dominant aspects and dark sides in the situations of the party are helpful in guiding people to correctly treat party rectification and consequently in increasing people's confidence in striving for a better party style of work; the analyses made in the conclusion of the report about how Marxists should treat difficulties are also dialectical and convincing. All these represent the party's scientific art of leadership and working method.

Our party has become good at summing up experiences and guiding construction according to materialist dialectics; this ability has been achieved following the tortuous path taken by the party over the past two decades and more; this ability is based on deeper understanding of the law of socialist construction and it represents an important mark, showing that the party has become more mature in carrying out leadership.

During the democratic revolution, our party began to understand objective law after it experienced a tortuous path for more than two decades prior to the seventh party congress and overcame serious subjectivity and lopsidedness ideologically. Thus, the party has been able to place a series of principles and policies on the scientific basis of materialist dialectics. History will not repeat itself but it often has similarities. Our party's understanding of the law of socialist construction also became overall, profound and firm after the tortuous path that lasted for more than two decades prior to the eighth party congress.

We cannot but acknowledge that we have paid a high price for the difficulties we met since the eighth party congress. But it is not necessary to regret tortuous paths in history. It is very seldom that people understand the law of development in a plain sailing way and to experience a tortuous path in this aspect is more in line with materialist dialectics. Like the situations in the period of the democratic revolution after the 6th party congress, the tortuous development and the repeated comparisons of victories and failures in the more than 20 years following the 8th party congress have profoundly educated the party. As a result, we have deepened our understanding of the law of socialist construction, our party has become more mature and it has been able to base its guiding ideology, principles and policies and leading method on materialist dialectics even more firmly. In this aspect, we can say that the significance of the 12th party congress is similar to that of the 7th party congress. That is to say, while the 7th party congress was able to guide the revolution to victory, the 12th party congress will guide the construction to victory.

An important feature of the report to the 12th party congress and an important content of general guiding ideology is that the party is good at summing up experience and guiding construction by making use of materialist dialectics. If we spare no effort to understand how to use materialist dialectics in summing up experience and in guiding construction, we will eventually be able to considerably improve our ideological level and leading ability. If we do not work hard to improve our way of thinking and overcome subjectivity and lopsidedness, we will not be able to profoundly understand and grasp in an overall way the principles and policies of the party Central Committee although they are scientific and dialectical and consequently we will not be able to carry out these principles and policies correctly and we may even make mistakes.

The report to the 12th party congress deals with general guiding ideology and some major principles and policies and therefore in studying this report, we must relate these guiding ideology and principles and policies to our own thinking and practical experiences so as to see what kind of thinking and ways of working are in line with materialist dialectics and should be persisted in and developed and what are contrary to materialist dialectics and should consequently be overcome and corrected. The report deals with the whole and general situations while the situations, experience and practice of various fronts, regions and units are partial and individual. To understand the whole situation and the general spirit is in the interest of studying partial situations and analyzing individual situations; on the other hand, in linking with partial situations and individual situations we will be able to understand the whole situation and the general spirit still better.

Some comrades considered the study of materialist dialectics to be the business of philosophers. According to their view, it is the "business of the above" or the "business of the CPC Central Committee" to use materialist dialectics in summing up experience and guiding construction and this work has nothing to do with them. But it is not so in reality. As a universal law of nature, society and ideology, materialist dialectics exists everywhere and all sectors belong to this sphere. As scientific ideological methods, materialist dialectics is the soul of all methods and in the final analysis, any leading method and working method cannot but take materialist dialectics as their core.

Take the economic work situation for example. A major feature in major and masses production is that various departments, enterprises and links are closely linked and they condition each other. They are constantly moving and changing and in the process of their development there exists dialectical relationships of various contradictions and various unity of opposites. These relationships include those between industry and agriculture, light industry and heavy industry, accumulation and consumption, planning and freedom, centralization and decentralization, quantity and quality and speed and efficiency. This situation demands that in studying economic problems and guiding economic work, we must resort to the scientific thinking of materialist dialectics, consciously study the movement of contradictions in the economic sector and correctly handle various dialectical relationships of the unity of opposites. Some advanced regions and units have been able to develop production vigorously and develop economy rapidly and naturally they have good experiences that merit our studying. If we carry out meticulous study, we can find that the most basic reason is that the comrades who are responsible for leading production are good at considering economic problems dialectically and that their ways of thinking and working accord with materialist dialectics and the law of unity of opposites. For example, the experience of the so-called "coordinated process" in industry in fact represents a correct handling of the relations of the unity of opposites between specialization and coordination while the experience of "united body of scientific research and production" represents a correct handling of the relations between production and scientific research (the so-called production provides the subject and scientific technology writes the article). Another example, the success of the introduction of production responsibility system in rural areas is that because this system has correctly handled the dialectical relations between individuals and collective and between collective and the state. On the other hand, the reason why the practice of "everybody eating from the same big pot" obstructed the development of production is that it opposes the dialectical method in economic life.

Is it possible to carry out management and define policies without resorting to materialist dialectics? Comrade Chen Yun said: "In studying problems, defining policies and deciding planning it is necessary to compare various schemes"; "it is necessary to consider problems from various angles and study various conditions and feasibilities." These words represent a consciousness in using materialist dialectics. A book about management said: "Correct policies can be achieved from among positive and negative opinions." This view also accords with dialectics.

The situations are the same in other works. Our forefathers said these words in talking about writing articles: "The method of writing articles is combining flexibility and rigidity" while in creating works, artists resort to the method of "strength and grace" and "images and appearances." All these mean using materialist dialectics in summing up experience and guiding creation consciously or unconsciously. Any sector that has achieved good and successful experience is in line with materialist dialectics. Any work has its own relations of the unity of opposites but as long as we are able to handle well these relations, we can promote our work and reach and surpass advanced standard.

The report to the 12th party congress points out: "In the new historical period, it is one of the greatest creative project of mankind to build an originally backward country in both economy and culture such as China into a modern and powerful socialist country." To finish such an arduous and complicated project it is even more important to grasp the scientific ideological method of materialist dialectics than any other creativity. Should there be any doubt over this question?

WHAT ARE THE DIFFERENCES AND RELATIONS BETWEEN THE COMMUNIST SYSTEM, IDEOLOGY AND MOVEMENT?

Beijing RED FLAG in Chinese No 24, 16 Dec 82 p 43

[Article by Lu Chen [7120 1057]]

[Text] In the report to the 12th CPC Congress, three concepts have been used in connection with communism, namely, the communist system, the communist ideology and the communist movement. What are the differences and relations between them?

The authors of Marxist classics used the term "communism" in different contexts. First, as a social system in the higher phase of development of human society. Marx and Engels scientifically brought to light the objective law that capitalist societies will invariably develop into socialist and communist societies. They also put forward a number of scientific assumptions regarding the future of communism as a social system. In their opinion, communist society must go through the socialist and communist phases in its development. In communist society, which is a higher phase of development, the productive forces are highly developed, the means of production are publicly owned by the whole society, class distinction and social inequalities are completely wiped out and the principle of "from each according to his ability, to each according to his needs" is implemented. It is the most advanced, the most reasonable and the best social system in the history of mankind. Therefore, the authors of Marxist classics often used the term "communism" to show the ultimate objective of communists. Second, as a scientific ideology or theory that guides man in his struggle for communism. Engels once said: "Communism is teaching concerning the conditions for the emancipation of the proletariat." This teaching is the theory of scientific socialism established by Marx and Engels. It provides the proletariat with a powerful ideological weapon for winning their emancipation. Third, as a movement toward the goal of communism. Marx and Engels held that the realization of communism as a social system in any country involved a protracted course of practice and required the relentless efforts and struggle of the proletariat and the revolutionary people. Therefore, communism is more than just a social system. It is above all a movement. Marx and Engels said: "We call communism a real movement which abolishes the present state of things."

The above shows that the communist ideology, the communist movement and the communist system are interrelated. First, without the guidance of the communist ideology, there will not be any communist movement. Only by educating the working class in communist ideology can we make the workers see the essence of the exploitative relations of capitalism, understand the historical mission of the working class and organize their own political party--the communist party. It is only under the leadership of the communist party and with the guidance of the communist ideological system that practical activities with the realization of the communist system as their ultimate objective--the communist movement--can take place. On the other hand, the communist ideology is established by Marx and Engels; but it is not an immutable, ossified dogma. It is a revolutionary theory constantly enriched and developed through practice in the communist movements of various countries. The communist ideology must be integrated with the concrete practice of the communist movements of various countries before it can truly guide the proletariat and the working people in their struggle for emancipation.

Communist ideology, the communist movement and the communist system are also inseparable because it is impossible to set a movement apart from its objective. Communism as a social system can definitely be achieved. This is an inexorable law of the development of human society. However, this does not mean that the communist system can spontaneously emerge in a capitalist society. It must first go through a socialist revolution involving the replacement of the dictatorship of the bourgeoisie with the dictatorship of the proletariat and also the building of socialism. This is also the course of development of the communist movement. The communist movement has the communist system as its ultimate objective and the communist system can only be realized in full through the constant development of the communist movement. It is precisely in this sense that the report to the 12th CPC Congress emphasized that "communism is above all a movement." China has now entered the first phase of communism--socialist society, and communist ideas and actions have long been part of our actual life. Therefore, the view that communism is but a "dim illusion" and that it is no longer necessary to publicize communist ideas is wrong.

However, while recognizing their interrelations, we must not lose sight of their differences. Although the communist movement has the communist system as its ultimate objective, we must not equate one with the other. The communist system can only be realized when the social productive forces are highly developed, when all members of the society have greatly heightened their awareness of communism and when science and education have been greatly developed and become universal. This requires the protracted efforts of several generations. Therefore, the communist movement is divided into stages according to different historical periods, and different stages have different historical missions. We must not mix them up. Although we now stress communist ideological education and the extension of the communist movement, it does not mean that we must now practice the future social system of communism. We must use communist ideology to guide our socialist construction and fulfill our tasks in the historical period of socialism. We must also set demands on the CPC members, CYL members and all advanced elements according to the communist ideology and moral ethics and, through them, to educate and influence the broad masses to work for a high level of socialist spiritual civilization. Besides, the different policies followed by the party at different historical periods are worked out under the guidance of the communist ideology in the light of actual conditions. In order to fight for communism, we must carry out the party's policies for different historical periods. At present, we must carry out the party's policies for the period of socialism, such as the policy of to each according to his work. Therefore, it is completely wrong to confuse the differences between communist ideology, the communist movement and the communist system and not to conscientiously carry out the party's policies for the stage of socialism.

'IGNORE THE STRONG POINTS AND BRING INTO PLAY THE WEAK ONES' AND 'DEVELOP THE STRONG POINTS TO OFFSET THE WEAK ONES'

Beijing RED FLAG in Chinese No 24, 16 Dec 82 inside back cover

[Article by Jiang Xia [3068 7209]]

[Text] Our forefathers said a lot about the philosophy of employing people. Some of the more sensible theories were that we must "make use of the strong points and ignore the weak ones" and must not "ignore the strong points and bring into play the weak ones" or "employ a person to do something which he is not skilled in." Some people even came up with this extreme comparison: "If everyone develops his strong points to offset the weak ones, there will not be a single person under heaven who is unfit to be employed. If everyone ignores his strong points and brings into play the weak ones, there will not be a single person under heaven who is not to be rejected." This highlighted the importance of appropriately handling people's strong and weak points.

We often come across sayings to this effect in "Zhenguan Zhengyao" [6297 6034 2398 6008] ["Political Records During the Reign of the Taizong Emperor of the Tang Dynasty"], "Zizhi Tongjian" [6327 3112 6639 7003] ["A Synopsis of History"], "Guwen Guanzhi" [0657 2329 6034 2972] ["The Best of Classical Writings"] and even in some poems. These sayings give equal weight to reasoning and analogy. They are vivid, incisive and enlightening. However, although their reasoning and analogy show keen insight, they also reveal certain weak points. For example, "the employment of persons" is often simply likened to "the use of tools," "a carpenter's choice of wood," "the picking of a horse" or "the buying of a piece of jade." Without knowing, they obliterate the characteristics of personnel matters and turn people into things. Thus, man's dynamic role disappears and his strong and weak points become innate and unalterable. This gives rise to corrupt practices.

In "Qingshi Biecai Ji" [3237 6108 0446 5932 7162] ["Selected Poems From the Qing Dynasty"], there is a poem by Gu Sixie [7357 0843 0588] entitled "Zaxing" [7177 5281] ["Miscellaneous Thoughts"]. The poem says: "A fine horse can undergo adventures, but it cannot be compared with a cow in working the fields. A firm and solid cart can carry heavy things, but it cannot be compared with a boat in crossing rivers. If we ignore the strong points and bring into play the weak ones, even a wise man will be at his wit's end.

What makes our production tools useful is that they serve our needs. We should take care not to be overcritical." The idea of this poem is no doubt correct insofar as "employing a person according to his skill and ability" is concerned. However, things are not that simple when we consider the needs of the situation and changes in the development of human resources.

No one knows everything and no one can do everything. In this connection, it is metaphysical, unpractical and even a breach of common sense to "ignore the strong points and bring into play the weak ones," demand perfection and try to make somebody do something which he cannot do. However, some of man's weak points are just signs of neglect, narrow-mindedness or one-sidedness. If these are not properly overcome and offset, they will hinder the full development of the strong points. At a time like this, "bringing into play the weak points" becomes our starting point in "offsetting the weak points." If we indiscriminately reject "bringing into play the weak points," we are not far from "shielding our faults." People who "shield their faults" are unwilling to know their weak points and to make an effort to improve. How can these people begin to talk about progress and advancement!

Some people quote this saying by our forefathers every time they are assigned tasks which they do not know much about: "If we try to make everybody do things which he cannot do, we will find that there are not many capable persons." They make it quite plain that they are unwilling to do the job or are merely working with great reluctance or in a slapdash manner. They do not understand that when we start an undertaking, there is no way to avoid unfamiliar territory. People have dynamic power. They have the ability to learn new knowledge and grasp new skills. As long as we make a conscientious effort to study and to temper ourselves, our "weak points" can be turned into "strong points" and "things we cannot do" will become "things we can tackle with ease." If we retreat every time we come across difficult problems, how can we master new skills and special knowledge?

In the final analysis, the strong and weak points of a person are by no means innate (the idea of "my ability is bestowed by heaven"). They are shaped by the history of society and the needs of the times. When new historical events arise, a series of changes will take place, both in the overall structure of the strong and weak points of human resources in society as a whole, and in the established state of the strong and weak points of the individual. Some strong points and special skills may continue to be useful and some weak points and shortcomings need to be offset. Nevertheless, the bulk of the work is to cultivate new skills according to new needs. At a time like this, we must answer our cause and do or learn things which we are not skilled in at the moment. This may appear to be "bringing into play the weak points" or "demanding perfection," but actually it is the only way to advance our cause and to develop human resources.

At present, we are endeavoring to create a new situation in socialist modernization. There is now a much greater need for qualified persons in all fields. Qualified persons in different fields also have more opportunities and occasions to put their ability to good use. Society has an endless need for qualified persons. Under such circumstances, it seems that while continuing to pay attention to the policy of "ignoring the weak points and bringing into play the strong ones," we also have to lay stress on "developing the strong points to offset the weak ones" on the question of employing human resources. We must serve the needs of the development of our cause and cultivate, through training, new strong points which were lacking in the past but are particularly needed now.

"Bringing into play the weak points" and "demanding perfection" are not to be tolerated. Similarly, "shielding one's faults" and "noninterference" are also not to be tolerated. Our cause needs and is bringing up all kinds of qualified persons. Qualified persons in all fields must serve the needs of our cause and actively push our cause forward. This is probably the gist of the question of human resources.
